Well, you're generalizing about hams, so why not generalize about the entire population of the planet, shall we? By making blanket statements like you have been, that all hams are doing illegal stuff with their radios, you're discriminating against them because of their interests.

HEY, JJ,GARY AND RFENFORCER, you have a fourth dance partner to do the sidestep with.
actually, i can spell really well. it's just that i have fun finding and tripping sidesteppers like you and the rest of the rf police who can't focus long enough to answer one simple question.
if you can't answer one question for me, then why do they read and spam others questions with unsolicited, off topic rethoric???
i'll bet you couldn't answer that one either.
get back on the porch, pup.

Hello, I have been posting the following on all related sites I can find. Thanks to those who have sent info etc.

Thomas

Hello. I am a writer living in Los Angeles who is interested in developing a character who has as his love, scanning the channels and listening to the different dramas that take place in what is a world only known to those who listen. I have no experience whatsoever in scanning, have no idea about the language etc. My father, ironically, was a radio communications man during WWII and one of his hobbies was as a ham operator - no fifteen foot plus antenna, but a great old tube machine that I always enjoyed playing with. I am also someone who has made a living working as a sound editor on films of all types, from small independent to big Hollywood, before I became a writer. Listening has been something I've done all my life and have wanted to have a character in one of my stories be able to show something of what it is to listen.   All that said, if anyone has anything they can tell me or wish to start a dialogue, I am curious to learn and be directed in learning about what goes on out there. Thanks for your time and I look forward to talking with and getting advice from some of you.

Regards,

Thomas

RHOOLlGAN2 and your butt buddy's Gary D. and RF get a clue You can call any Ham Radio store or outlet even the manufacture and order a Ham amp one step from full output on 11 meters. Go to www.qrz.com .mod page and boom your on 11 meters with a real good amp and sold to you by a ham operator.Pretty cool! Take care ....~~~~~~~!   !~~~~~~~

>you are right on that count but at least i do it up front instead of the underhanded way that the rf police try to do it.<

Yep. Nothing like a BLATANTLY obnoxious person as opposed to one who tries to be civilized about it.

>where?<

If you weren't spending so much time being obnoxious and spent a little more time READING some of the posts looking for more than troll-bait, you might have read it. Too late now.

>what are you talking about? aside from the freq difference, the rf technology and propagation are almost identical between 10 and 11 meters as evidenced by the interchangeablity of cb and ham radios to both services<

If it has to be spelled out for you, you are one of those people for whom the phrase "If you are not a part of the solution, you are a part of the problem" was authored.

>it's too bad that cber's got there too late. hams have held the patent on this one since the 1950's.<

Since you bring it up, perhaps you'd be willing to provide us with a "for instance"...?

>boy, talk about double speak!!!!!!!!!!!! all of the hams of the rf police persuation act as though God only speaks on ham freqs so don't run that shit on me boy.<

And how does my asserting that I am no better/no worse than any other man/woman equate to my being a mouthpiece for God?

(SNIP)...>so don't run that shit on me boy.<

So you are saying I *AM* better than you, Jeff? Thanks for the complement, but I hardly think so...

> i have to admit that you have said so eloquently in this last line, what i've been trying to say here for 5 months to all of those clay-footed Gods out there.
seriously, i like it so much that i will repeat it here and print it up to hang on my desk:<

Again, thanks for the compliment, but perhaps if you weren't so insistant on cramming your opinions on what's acceptable/not-acceptable as far as responses top posts, others would just fade away?

You make some valid points, but the "yelling" (internet style) and frequent blatant profanities only stereotypes you as one of "those" CBers, as opposed to the rest who try to make it a useful tool or enjoyable hobby.

73

Try putting a jumper wire across the trunk hinge. There are probably nylon
bushings in there that don't allow a good connection leaving only the
springs, (can you say an inductive coil?) I had this same problem with my
Dodge Neon to a lesser degree. I put a #10AWG jumper with spade connectors
and self-tapping screws into the hood frame and the frame of the car that
holds up the rear deck. This really helped. Use stranded wire so it can
flex with the motion of the hood. I also drilled just a bit of the paint
away where the set screws of my K40 trunk lip mount sat and put some
dielectric grease there. That really helped.

O.K., asshole...

See below..
> > Yes, their are ways to open the chassis up...
>
> I asked for help. If you don't want to help me, at least don't patronize
me.
> Why did you bother with a reply?

I am not patronizing you. I simply said that their are ways of opening the
chassis up. If that offends you, I apologize.

>
> > Don't install the diode... Makes it sound like shit.
>
> I appreciate your opinion, but I think I'll try it just the same IF
somebody
> generous enough can help me find R264 or the *correct* point to install
it.
> If it sounds worse than the backswing I already get, I can always reverse
> it, right?

So let's see.... You asked for help, I gave you a bit of help, in
recommending that you NOT install the diode, and the first thing you do is
disagree.

Fuck you.

Next time, if your not going to listen to the help that people give, DON'T
POST A REQUEST FOR HELP!!!

>
> > I have worked on a couple of those chassis for people on the newsgroup,
> and
> > they can be made to operate nicely (deadkey 1.5 watts and swing 20+),
but
> > the mods are not for the faint of heart.
>
> "Faint of heart"? Like I said, why bother with a reply if all you're going
> to do is patronize me and refuse me the help I asked for?

I will be enclosing the modification below.

You could have at
> least posted what you charge to do your mods and spared me this "not for the
> faint of heart" crap.

I don't do this for a living. How much would I charge? I wouldn't do it for you, so cost is not an issue. You are one of the people (It is easy to spot them on a newsgroup) that insists that they can always get "1 more watt" from that radio, or "Just a little more swing" from that chassis...

See them all the time.... They don't interest me.

I'd appreciate some information

I am enclosing it below.

. If anybody is
> generous enough to help me, my email address is doctorbeltway at hotmail
> dotcom. All I'm looking for is a low key and decent forward swing.

I was going to post the information on what I do to that chassis, as a matter of fact, I typed the entire thing out.

I changed my mind. Your an asshole who is undeserving. Learn yourself. Why should I type it all out so you can disgregard it like the last thing that I told you.

Incidentally, you can get that chassis to swing from 0 to 21 watts with a basic circuit build.... However, it sounds like shit with less than a watt and a half of carrier.

Enjoy your radio.

Yes, it rather reminds me of what I hear on the 2 meter band and the Howard Stern show...

Wait... No.... Channel 6 uses no profanity.

Guess that counts out TV, 2 meters and radio.

>
> >Illegal? Of course. But as a person who has always been fascinated with

mobile
> with a Wilson 500?

Who needs to... The people who enjoy playing with the higher power, and the inherent limitations of a mobile generating that much power.

It is hard to do, and fun to persue.

I can tell you where the kid that was afraid to dissect the frog, too.... Don't try anything new or different. Just sit in the corner and do everything Clinton tells you.

Good little Comrade.

All that extra power just wipes out all the adjactent
> frequencies so no one else can enjoy themselves.

No, dirty signals do that.

I know of people who run 30 thousand watts (or more) on 75 meters and don't tear anything up.

Your another idiot that spews off at the mouth about something he knows little about, hangs out on Channel 29 (with an elitish little clique of people just like you) who have very little technical expertise but continuously brag about how good your stations are.

I listened to the same type of idiots for 10 minutes last night on 80 meters... It was disgusting.

Actually, I wasn't even talking about you.

I suggest that you get a basic understanding of the English language to start.

Then, work on your comprehension.

Next, learn UseNET conventions, and see that their was a ">" reply mark on their, implying that it was from another post other than yours.

Lastly, learn that everyone is not out to slam you.

Then, go reread the post I made, where you will see that I was backing you up.

Have a nice day.... Those fumes from Jersey must really be getting bad.

Bullshit.

I just looked in the ARRL manual as well as the antenna handbook.

No chart existed in either book.

Toll Free

woah, back up jack.
you haven't been keeping up with the drama that has been unfolding here over
the last 5 or 6 months.
```

here's a nutshell that i would challange anyone else to claim false:
1) people come here to rec.radio.cb to read, learn, inform, and ask questions.

2) generally, when someone asks a question, they are requesting an answer directly pertaining to said question. ie;
question: how do i put channels in my XYZ radio?
answer: cut here, jump there, change xtal ABC.
seems simple, doesn't it? not here.
if someone asks a question about channels or amplifiers, a portion of the ham community, the ones that i call the rf police or the sheriff and deputy, jump in with spam-like answers as to wether their actions are legal or not. i say spam-like because it has nothing to do with the specific question asked.
if someone were to inquire as to the legalities of such actions, these answers would be perfectly fine.
this portion of the ham community has the attitude that NO ONE who has a ham licence would EVER posess / use a piece of illegally modified equipment.
case in point, rhooligan2 responded to this same post as a "big piece of dog poop".
i rest my case.
they point and bitch at the dust pile in our yard while all the time ignoring the shit pile behind them.
all i'm saying to them is clean your yard first before you bitch about mine because we both have our shit pile but they have their noses up our asses so far that they can't smell their own. they have self-appointed each other the rf police and the guardians of the air waves in bands that, for the most part, don't even concern them. specifically the out-bands above and below cb.
if i choose to go there, that decision is between me and the fcc with no input nessessary from them but they keep side-stepping one simple question.
WHERE DID THEY GET THEIR AUTHORITY TO DICTATE TO ME / US WHAT TO DO WITH OUR LIVES / PROPERTY, (RADIOS).
if i were to follow you everywhere you drive and stop everywhere you stop and everytime you turned around, i told you every little traffic infraction you commited.
you would be asking me the same question. WHO IN HELL ARE YOU AND MIND YOUR OWN BUSINESS.
this is my question to them but thew don't have 2 balls between 5 or 6 of them to muster an answer so the fight goes on.
have a good day.
jeff

bill , after you gave the midland a good review, you piqued my interest so i
did a search for the midland unit on the web and i plugged in the word
'midland' cb radio on one of the search engines and i found some dealers
listing this unit for about $145.00. now cb city has them for about
$175.00, i think , but i believe he is telling the truth about that
price.........bye,......bye, bye ,bye.................

Tim, I went over to a diff site where it was supposed to be and it was pulled there also!!! The site was pulled over there cause it violated the rules where it was posted.
I also emailed the domain postmaster and it bounced right on back as not being real!!!

ALAN 9001 is an Emperor TS5010 with another name on it. I get so sick of companies copying each other's designs. Stick with Ranger or Uniden for a good 10 meter mobile rig. Just my oppinion.

Anyone can modify a Galaxy radio and not void the warrantee!

As long as the modification doesn't harm the radio, Galaxy honors any and all warrantees.

And, Galaxy doesn't have any "certification" process.

I think you where fed a line of shit.... Even if your radio does work good.

I have a schematic to the SB-220, but it is fairly huge, and I don't have a way to reduce it...

I have the original manual.

Is their anything in particular you need? I can look up a value or something for ya.

Yes, they are pricey...

However, one of those alternators would equal the same as three 165s.....

I run 3X165s, though, and that is a good combination... Along with the
stock alternator for the truck...

I suggest stripping out a piece of rg-8 coax and flatten the braid to use
for a ground strap, for flexibility.

He's right.  You're better off common grounding the negative and
running the positive to a source of constant voltage at the fuse
panel.  Often, there are convenient spade connectors at the fuse
panel just waiting for you to connect things to them.

I say go with the consensus opinion. Most of the posts to this
thread agree that hams do what they want regardless of legalities
just like CBers do. Remember, CBers and hams are PEOPLE. People
will do what people will do. The difference is that hams have
alot more leeway before their operation is illegal. THAT is the
reason why there are more legal ham stations than CB stations.

Thanks Bill.. I'm probably going to do such.

Are there mods available for it? I have my Uniden "tuned" for full modulation, I'd like to have that done for the Midland as well, but want to be sure the CB tech out here has the techsheet just in case.

I am asked over and over how to set the drive level into an external
amplifier. Let me first say that this is really only a consideration
when using the AM (DSB) mode. The
absolute best way I have found... that is 100% accurate to set drive
level is so simple... it's elegant! It involves hooking up the set and
the amp as they would be normally connected and terminating into a
standard (adequate wattage) dummy load. You set the driver level so
that when
you are transmitting on AM (DSB) with and without modulation... the DC
current through the amplifier stays at the same level. A simple ammeter
in the power lead of the amplifier can accomplish this. This
automatically ensures that you are putting out the highest dead key
possible without audio distortion!

Newsgroups: rec.radio.cb

You will need two ordinary 50 ohm antennas and two 1/4 wave lengths of 70 ohm coaxial cable (this length depends on the velocity factor of the cable; could be 6-8'). I recommend running conventional 50 ohm coax to each antenna first to tune each for the best SWR. Connect one end of each of the 70 ohm coaxes to an antenna. Tie the remaining two ends together. From that point, you can run any length of conventional 50 ohm coax to your radio.

By the way, this co-phasing harness (the two lengths of 70 ohm coax) does not have to be at the antennas. You can run conventional 50 ohm coax down from the antennas and then use this harness to match them to a single 50 ohm feedpoint.

The advantages of a co-phased array is its directivity. It will broadcast perpendicular to an imaginary line connecting the two antennas. It will have some level of rejection along that same line that passes directly through the two antennas.

The disadvantage is the flip-side of the advantage. You'll have more trouble receiving from the side. Generally, this is not a problem for truckers who want their signal to propagate up/down the highway and are not so interested in reception/transmission off to the sides. Furthermore, another minor disadvantage is the fact that more hardware means there is more to go wrong. These systems can take a little more maintenance than a conventional single antenna.

Another disadvantage is that on most cars the separation between the two antennas is less than optimum. If properly spaced, about 1/4 wavelength, the directive gain will be about 2.5 dB. Since they will not be optimally spaced, the gain will be much less. Almost not worth the effort from transmit end. Reception could be an improvement in the directive pattern though.

The spacing determines the directivity/rejection that you get. As you go from 0 to 1/2 wavelength (18 feet), the directivity goes from none to maximum.

Whites are quickly being overrun, and will
soon be a persecuted minority in their own land if they don't wake up
and do something about it.

I AGREE WITH THAT COMMENT ycthulhu@aol.com
but i still like to listen to Rush even though he does talk and brag about
himself alot

but what this country needs is God back in America again...have you noticed
that sence the 60's when they took prayer out of schools that the youth of
america has gotten worse and worse...back in the 60's you never heard of a
student walking into a school and killing all of his class mates...I tell ya it
is time to wake up and say LETS GET GOD BACK IN AMERICA again...

God Bless each and everyone of you
John

Thankyou Dave Hall!

<<There are hams that break rules, as there are CBers that break rules. The fact that some unnamed ham or CBer is running illegally, does not deprive another ham or CBer, who IS legal, from pointing out the error of running illegally to anyone asking for illegal mods. Many times newbies are not aware that what they ask is illegal. They may not want to be illegal.

Many people have been in CB radio for years. It is a hobby that has brought them many hours of enjoyment, and made them many new friends. Many of these old time CBers are becoming increasingly disturbed by the "new wave" CBer that has absolutely no respect for ANY rules, or even the simple actions of common courtesy. The "me first, up yours" attitude that has taken over society at large as well as the radio. The old timers are seeing their hobby being destroyed from the inside out, and in many cases are trying to fight back. If I care about my hobby, it IS my business, when someone else treats it with disrespect. Since we all are "the public", we all have a equal share of it, and it everyone's business. It's not like a private affair that you conduct behind closed doors. The radio is PUBLIC, so anytime you affect other people, it becomes their business as well.

Dave

I was not trying to put you on a pedestal, I was just impressed by some of the other stuff I have read elsewhere that you have posted, thats all. I would never just tie outputs of a amp together, just saying that you could, I myself like competition, nothing else as far as amps go, I personally dont talk on the CB that much. but when it comes to competition man that stuff is awesome. Some these guys build amps so they can pay the bills, so be it, I just drag racing with antennas, alternators, amps and everything else that goes with it.   PURE ADRINALIN!!!!!!!!!!!!!

Dat 10 ohm smoke,
Sure make you choke,
Da more dat smoke,
Da more ya broke,
Damn dat 10 ohm smoke!!!!

I think you should be asking the question: Why do I want to tune and
tweak anyway? Tuning and tweaking has little or no effect out on the
air in the real world. To get any real benefit you have to raise the
output power significantly... perhaps at least tripling your power for
any tangible increase. This can't be done effectively in my opinion
without an external amplifier. My advice... don't tune and tweak, go
for modulation enhancing mods and couple to an amp.

I have a MaCo CB VFO for sale. It is V-E-R-Y clean and it works. Output is in the low 11 MHz range, and it covers about 300 KHz of bandspread. Runs on 110 VAC only. Has one minor modification: I added an RCA-type jack on the rear panel for the RF output in place of the hard-wired piece of microdot coax.

Otherwise, it's exactly as I got it (that does not
guarantee there are no other mods, but I don't see
anything obvious that looks modified). Price $25
plus shipping. Will sell to USA and Canada only.

It depends upon how much transmit time you give it, but in casual use you should get a good weekend's outing from them and probably more. You could use rechargable batteries, but be careful of the voltage--a slightly lower voltage could affect the power output/range of the transceiver. You can buy cheap radios or good ones. You aren't talking the difference between a Yugo and a Mercedes here--buy a quality set--Kenwood, Icom, or Motorola. You get what you pay for and the good brands have all the bells and whistles.

My Maxon HWC-40 handheld has a 'low-power' switch that lowers the output from 4w to something significantly less to save the batteries in circumstances where range is limited but the battery availability is not. what is the difference? as long as the radio is not x-mitting more than 4 watts then it is not in violation.

Jim

?????*****AM (DSB)******??????

Are we talking AM {(DSB) suppressed carrier} mode or
AM {(DSB) with carrier} mode?

What do you do with AM [{(SSB) USB} suppressed carrier] mode,
the same thing?

How about AM [{(SSB) LSB} suppressed carrier] mode?

How about AM [{(SSB) LSB} with carrier] mode?

How about dropping the extra bull.

Further to a message I left earlier describing myself as a writer with
next to nothing in experience scanning who was looking for advice as
to where and how to start gathering info for a character I am
developing in a story who scans, an interesting thing has happened.
Some of you folks, thanks to all of you who responded, sent me stories
of experiences they felt were interesting, and I thought that this was
one of the ways I could get a better sense of the different types of
folks who "listen" and the similiarites they have at the same time.
So, if any of you care to share some of your experiences, I would be
grateful.

Regards,

Thomas

Can anyone help me with information on troubleshooting Radio Shack FRS-101
walkie-talkies?
I have several that we use for work that the recievers will not work.
Is this a problem that others have encountered?
Help Please!
AJ

Anyone know where I can get a CB power cord to cigarette plug

for my Cobra 19 Plus?
Thanks.

Pilgrim

Think you'll like it, have had a couple and they weren't any noisier than
2950's, took a lot less space under the dash, the WX band helped, and good
coverage. There are freq. mods, a pretty stout power mod, and modulation mods.
If you can live w/o the cute mike, a 575-M6 sounds super on one.

Eh Hem....

Those are not bias resistors...

They are their for parasitic suppression.

Toll Free

in some of the radios with the 9106 chip, it has a digital display. does your
display read all of the channel numbers compleatly and with equal brightness?
if not, a display segment may be shorted which could affect the signal getting
to the program pins.
also look for a cold solder joint or solder bridge in the circuitry from the
ch. changer to the chip.
it would also be a good idea to check all voltages it the same circuitry, step
by step for each pin / channel sw. line.
i don't have an actual truth table for the program pins as one probably doesn't
exist. the pins are arranged more as display drivers. the chip is actually
controled internally by an internal rom code controled by the external program
pins but i do have the internal rom codes which won't help you much and the vco
freqs if it helps as follows:
tranmit n code, ch1= 3345---   rec. n code, ch1= 3254
transmit n code, ch40= 3433---   rec n code, ch 40= 3342

transmit vco, ch1= 16.725 mhz---   rec. vco, ch1= 16.270
transmit vco, ch40= 17.165 mhz---   rec. vco, ch40= 16.710 mhz
this chip has a 455 khz shift pin which give the if freq shift on xmit and rec.
rec = 0---   xmit = 1
this is pin 8
i hope this helps.
good luck.
jeff

I have seen the frequency mod displayed 3 times that said all you do is hold down the DW and Channel 9 buttons when turning on the 79-290 to get extra freq's, but I tried it and it doesn't work. I had another person tell me something has to be done inside as well. Any advice?

Well, I've got the radio now and I plugged it into the cigarette lighter and no engine noise at all! This is on a 2000 Hyandai Elantra. The downside of this has already been mentioned through - the radio will not retain memory because the rechargable battery won't be able to charge up.

Thanks for the response "PLL02A", I went back and checked the display and all the channels light up the same. I also checked for cold solder joints but none were found. Without a schematic I can go no further. Thanks again for your help.

The question was related to beams. It is for a cophasing harness for a set of stacked M103c Maco beams.

11 meters is wide-open tonight. Been listening to Channel 26 tonight and what I'm hearing is very similar to the content of Channel 6.

Has Channel 26 become "The Bowl B-Channel" these days?

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

It seemed to strengthen the received signal somewhat. It was just laying on the ground [not connected]. Also tried leaning it against the fence at different angles for the heck of it. QRM was less with the horizontal dipole than it was with the vertical.

I did this for the fun of it and not for the purpose of using it for a serious antenna. I was playing with the idea of making my own beam. You know the boom of a yagi beam is just a supporting structure and not really part of the radiating elements. If you wanted too, you could string extra wire in your attic to form a beam. The reflector [back door] needs to be 5% longer than your dipole. The radiator [Direction of signal] needs to be 5% shorter than your dipole. I would put another radiator [5% shorter than the first] in front of that one to form a 4 element beam.

A good site to learn about antennas is
http://members.tripod.com/~cb_antennas/
If you want some good plans look at Maco's support page. It has owners manuals with measurements and all at
http://www.majestic-comm.com/maco

Chicken wire or chain link fence really isn't a good thing to use. It kinda confuses the antenna because the different lengths of wire act as both radiator and reflector. Have fun!

I don't know if the below was a serious question or not - but anyway there are my two cents worth.

Scott, when ya'll moved in there, did you sign the standard home owners agreement with the subdivision? If not tell them to kiss off. Put up a 50 ft tower with a double quad on it.

     I agree.  I've pulled at least a hundred TR24s and
     TR32s.  Doing so makes a CB no different than older
     ham equipment where the modulation percentage is
     controlled by the operator through proper adjustment
     of the mic gain control.

     In fact, I've seen cases where power mics caused the
     active device (TR24 or 32) to become leaky which showed
     up as a distorted TX audio symptom.  So, not only does
     removing the active device in the limiter circuit
     increase performance, it also increases the radio's
     reliability.

Yes, but the tech has to be familiar with them and
have service literature.

> I have my Uniden "tuned" for full
> modulation, I'd like to have that done for the Midland as well, but want
> to be sure the CB tech out here has the techsheet just in case.

That's good thinking. Q33 is the limiter transistor.
It must be removed for full modulation. The 79-290
uses surface mount technology, so there are no part
markings on the board. To find Q33 you have to have
a copy of the specific page out of the service manual
that shows the part numbers for that section of that
half of the main board.

The mod for extra channels is very easy as well as
long as you have the proper instructions and a picture
of what has to be done on the control head board.
Don't be fooled by the misinformation that's on a
few CB mod websites that say all you have to do is
press a couple of buttons while you turn the radio
on to access the extra channels. You have to do a
hardware mod, THEN the button pushing stuff works.

I hope this helps.

Yes, a hardware mod inside the control head has to be
performed. Then the button pushing stuff will work.

To increase the apparent loudness of the TX audio.

> Tuning and tweaking has little or no effect out on the
> air in the real world.

That's not true. You're mixing up apparent loudness with average wattage. You should specify which one you're talking about. I agree that tuning up a radio does little to increase its average output from a real world perspective. However, a tune up does have a noticeable effect on apparent loudness--that's why tune-ups are so common.

> To get any real benefit you have to raise the
> output power significantly...

AFTER you've performed a simple tune-up to max-out the radio's modulation (apparent loudness). In many cases, with CB, part of a "tune-up" is the process of setting the radio's dead-key output to compensate for the positive peak gain compression that's inevitable when the signal is put through a common CB amp. That's another part of "tweekin" radios that you've overlooked.

> perhaps at least tripling your power for
> any tangible increase. This can't be done effectively in my opinion
> without an external amplifier. My advice... don't tune and tweak, go
> for modulation enhancing mods and couple to an amp.

A simple tune-up is the cheapest and most direct way
to enhance modulation. After that, antenna optimization,
location optimization (if possible) and finally, average
power increases through the use of an external amplifier
should be one's goals.

How about some more info. Is it biased for use in SSB radios?
What device is it centered around, an MRF455? What becomes the
heatsink, the speaker side cover? Will it work with 10 meter
and export radios without causing instability problems? Talk
to us--don't drop a half-assed ad and run.   You don't even
supply any info on how to get ahold of you if someone is interested.
At this point, your post is just unsubstantiated crap.

> for your help.

Do you have a frequency counter? If so, cut the trace to
the lock detector pin and find out where the radio goes on
the channels where it doesn't work. Also, see if you can
figure out the pattern of failure. In other words, see if
you can figure out what PLL chip pin is common to all the
bad channels and see if you can force its logic up or down
to make the missing channels work. For example, put the
channel selector on channel 5 and see if you can force the
PLL chip to give you channel 6 by changing the logic
(grounding to force low or connecting to the chip supply
pin to force high) on a certain pin. If you can't do that
chances are the PLL chip itself is bad. Another clue is
if you find a programming pin voltage that's neither high

or low with the channel selector in any position. Cut the trace that connects the channel selector switch to that pin. If you find that the channel selector is trying to switch the proper voltages to that pin, you'll know that it's the chip that's skewing the logic voltage. If you can force the logic high or low and get the missing channels, you'll probably find that the voltage to a certain leg of the channel selector switch is low (somewhere between the voltage that will change the logic of a programming pin and ground). Tracing back through the switch circuit should lead you to the problem.

Good luck.

> standard (adequate wattage) dummy load.

You don't even need a dummy load for the technique that
you describe. It should be common practice to never run
an amp unless the amp-off SWR is 1.5:1 or lower. If the
amp-off SWR is higher than that, you should be concerning
yourself with lowing the SWR rather than how to set the
dead-key drive. When the amp-off SWR (measured at the
output of the amp) is 1.5:1 or lower, the technique you
describe will work regardless of whether it employs an
average reading wattmeter or a DC ammeter.

> You set the driver level so
> that when

So will a simple average-reading wattmeter.

> This
> automatically ensures that you are putting out the highest dead key
> possible without audio distortion!

The technique you describe has been being recommended
for years and years. All you need is some form of
average reading meter be it a DC ammeter or a wattmeter.

The low bias should be a clue. How is the bias applied?
If it's applied at the cathode there could be a leaky
part that's partially grounding out the bias as well as
the input signal. Work on getting the bias back to
normal and you'll probably solve the low output problem
at the same time.

Good luck.

I agree. Go with something that uses a pair of MRF455s or SD1446s.
These days those types of amps are called 225s. I recommend the
Blue Face type. It will say Palomar 225 on the front. The front
(face) will be blue--that's what gives it away. If you can afford
a little more, go with the Blue Face 200 XL (aka 200 XLR). The XL
amps have more features and are nicer than the straight 225s which
are economy model amps.

I cant speak for the present but the following were the *real* manufacturers of Radio Shack products about 15 years ago:

The Ham radio's were made by The Standard Radio Company - Top notch equipment

Most of the CB's were made by Uniden, amoung others - Well, you know

The Coax was manufactured by American Insulated Wire and The Carol Cable Co. - Not as bad as everyone thinks........for the money.

RS Shortwave radios were made by the Sangean Co. - Again, top notch

Most of their Stereo's were made by Marantz and Pioneer - These names speak for themselves.

The RS TV's were really RCA

Their antennas were made by Channel Master and Antenna Specialists (Really Avanti)

And, finally their stereo speakers were mad by Technics, JVC or Panasonic depending one how high in quality one wanted to purchase.

Radio Shack is just a marketing company that uses it's vast distribution capabilities to market products that otherwise would be considered quality. However, most people think that because a product is bering a RS name, that the product is junk, which is hardly the case.

Last year I bought an Olympus TV Satellite System from RS that was really made by USSB.

If something walks, waddles and quacks like a duck, its a duck..........regardless of its name.

It is very simple to route your microphone into an effects processor and =
then into the radio. Ive done it myself and Ive gotten some pretty =
interesting sounding modulation using Digital Delays, Reverb, =
Compression and others.

All you have to do is take the two microphone audio wires, route them =
into the "Line In" jack of the effects processor, and then from the =
effects processor "Line Out" jack, go into the radio's microphone audio =
pins on the mic connector on the front of the radio. The only other =
thing you'll have to do is connect a switch to the radio's mic connector =
pins so you can key the radio when you want to speak.

>The weather reports and
> signal checks..."How many pounds am I giving you" are laughable.

So I guess your QSO's talk about Current Events, Nuclear Disarmament and
International Brotherhood eh? I have a great idea! Why dont you hop on your

local 2 meter repeater and check into a Skywarn Net so can can report to other "no-lifes" who think they know alot about radios what color the clouds are in your neighborhood. After all, you dont have to know much about radios to work 2 meters anyway.......

>The
> unfortunate truth is that the average CBer has an eighth grade education,
and
> is full of half-truths and cockeyed beliefs about Radio in general.

Thats an interesting statistic. Can you please post where you acquired this benign fact?

>I pity
> their neighbors.

Gees, now you sound like Mr. T...................do you wear gold chains?

> The sooner the Bowl is flushed; the better for all
> the good guys, e.g. the legal operators, who value friendliness and real
> conversation!

Sure, whatever you say. By the way, when did you get your Tech License anyway?

I'd say that 26 is more like the "The Bowl C-Channel," at least on the West Coast. I hear more big amps and loud radios on channel 11 than on channel 26. In fact, many of the channel 6 "regulars" seem to alternate between 6 and 11, like Mod Squad in Honolulu.

I was told by several sources that the PREDATOR antenna is
the best mobile CB antenna on the market today. Can anyone
confirm this? Also, according to pictures that Ive seen, the
predator antennas seem to come in various lengths. Does
anybody know what the height of these antennas are and
is the mast large in diameter? cant tell from the pictures.
thanks in advance for the replies.

I get a huge kick out of all the Cbers that "attempt" to carry on long distance communications with their "pumped up" stations. First of all; most of the radios sound like garbage. The solid state (trash) amplifiers are totally distorted. The D-104 mic's are likewise overdriven and sound like shit. Some ops are smarter than others and understand the value of directional antennas. Most attempt to "get out" with their Antron's and I-max 2000's. The "DX" exchanges (mostly one hop, stateside stuff), carried out by screaming into an already amplified mic., last a pathetic few minutes. The weather reports and signal checks..."How many pounds am I giving you" are laughable. The unfortunate truth is that the average CBer has an eighth grade education, and is full of half-truths and cockeyed beliefs about Radio in general. I pity their neighbors. Having to put up with TVI, BCI and RFI is bad enough. But, to also have to put up with the ape-like gibberish that passes for communication must be truly disheartening. The sooner the Bowl is flushed; the better for all the good guys, e.g. the legal operators, who value friendliness and real conversation!

I use Nicad batteries in my Icom 4008As' and get 24+ hours.
Most of this is stand-by, with about 5-10 min. tramsmit total.
They are 650mA Everedys. Nicads should be run down to where the radio
won' work anymore before you recharge them. That way you get the
longest regharge life fron them. I haven't seen any reduction of
transmit power with these batteries, but then again, the Icoms are
strong transmitters and that could be the reason.

This is a bunch of crap. The problem with this country is the tax
burden of the citizen. Mothers can't afford to stay home anymore
because if both the mother and father don't work, they won't have
enough money to live. Children are being raised by day cares and
Nintendos.

Welcome to the new world order.

Can you construct an antenna that looks like either a TV antenna or a
mini-satellite dish?

Seriously, there is a relatively new Congressional ruling that supercedes home owners restrictions and allows you to erect outdoor TV antennas and small (18") satellite dishes. This is federal law and there isn't a damn thing the local Homeowner Nazis can do about it.

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

Well this has nothing to do with ham unless you fell for the troll.
By the way I have less than $250.00 in my HF ham station. I would guess that a

```
large
number of Cbers have that much or more it theres. So what is the big deal. If you
want to talk on the CB and/or Amateur bands you can spend as little or as much as
you want. There are jerks on both you have to deal with. The price of equipment is
only and excuse. That's my say on this troll line.

radiated power is the point
not the power in the antenna

a magnetic field is generated by current flow
ther is no current at the top of the antenna
so no radiated field

 I would suggest running about 150 to 200 watts. More preffered 150 or less. It
really depends on
thee efficiency of the amp. and whether the power supply is 20A continues or 20A
surge.

Well it really depends on your budget. I have read all the post and one important
datail you
left out was what were you figuring on budget wise for an antenna. If you are not
looking on
spending a Bundle of money on a good performing antenna. A maco V5/8 is a way too
go, or you
could keep your eyes out for a good used 5/8 wave antenna. If you have the cash to
burn a beam
is a better antenna, but does have a few more bad points. Just to list a few. A
beam has more
surface area which equals more wind load. It is alot more assembling than a
Verticle ground
plane antenna. Thus it could end up being alot more work to install that beam if
you have to put
it on a 65-foot tower. Then there is having to get the right rotor and I would
definitly look
into using a thrust bearing. This all goes along with having a beam. Unless you
set it up to
talk pointing one way and keep it there.

Another over looked point i noticed was what type of coax are you using. That
could be part of
your problem with your interference. I would go with RG-213 or better. espcially
if you have a
long run of coax to make.

Dude,
Are trying to kill yourself ie: get yourself killed?
Signing a death warrant like this is not a good idea if you want a life.
oh....but of course, you don't have a life. Just an 8th grade education
huh.
Pity pity....

You have proven that your recieve transistor/crystal (whatever it may be) is
fried and your speaker is blown.

you will no hear dc static on a radio
if you do is will sound like a poping noise
becuse it will build up till it ars some place
and you will hear the pop from the rf generated by the arc

yes static is wide banded but the radio only hears the static in
the passband (ie) 27.405mc +-5kc

yes it can bleed off other stuf (ie) 0 to 25mc and 30mc up
but the static it hears is still at 27.405mc +-5kc

so why will it bleed of the static but not the signal (ie)27.405mc +-5kc
that you want to hear

With that theory in mind would like to explain that someone can be struck miles away and not
have a cloud in sight. It is true that there are lightning strikes that are developed with the
flow of electrical charge and energy that discharge upward.

I also have the question to pose, Does lighting never strike twice in the same place?

Hehe, I may just wire the radio directly to the battery, if I can find a good opening in the firewall to run the wire through. At first I didn't think the engine noise was bad, but it's about as bad as the 2950 was... I just didn't realize it when I installed it because there was so much QRM on the airwaves. When it quieted down at night and I was talking to the locals, I heard lots of noise.

Most of the guys do it for competition purpose, you know keying on one another. 99% of them could make you unhearable, but if you stay off of the bowl you will not have to worry now will you? now carry your would be

educated, afraid to post your real name (or call) ass on down the road
before someone keys on you duck!!!!!! P.S. go practice the code so you can
get a real license. Leave people alone, quit whining about matters that dont
pertain to you.

I will honestly say I don't think I have ever seen a True class B amplifier used
on CB. If I did
I just Didn't know it.

Most amp designs are class AB, AB-1, or C. I have seen some Single Tube class A
amps before. Not
many.

The class B as above mentioned is probably a class AB. I bet, but I could be wrong
and that
wouldn't the first time nor the last.

that must have been the Uniden Washington, that was sold under the The Radio Shack name. Cause I
beleive that the President Washington 858 chassis was sold as....If I do remeber correctly was
the TRC-458, or 457 which ever the Basa Station one is.

If I am wrong please let me know cause I'll then have the mods all backwards for those chassis.

I agree for the most part.

I say put a rotor in the top section of the tower and use the thrust bearing. Start with at least a PDL-II, an M-103, or a Moonraker IV on the top of the tower. I highly recommend being able to switch between palarizations (vertical and horizontal). Forget the 5/8 wave. Re-mount the A-99 10 or 20 feet above the peak of the roof as close to your operating position as possible (to keep the coax run short). Use the A-99 to talk locally and to see if the band is open (the skip is running as much as you want). Then, if things are looking the way you want them to look, switch to the beam and fire up the amp. A beam antenna and a kilowatt makes CB a piece of cake. In other words, anyone you hear you'll be able to talk to. In a way, a beam on a tower and a big amp takes the challenge out of it. You may find that you get bored quickly because your system will provide "sure thing" performance.

     Go all the way and remove TR24--you'll be glad you did.
     It's like the radio is designed to work without TR24.
     Center slot the mic gain and you'll sound great.  To
     do so seems perfectly natural on that radio.

     The 122 is a little different.  It has a ton of built in
     mic gain and no mic gain control.  So, you have to pre-set
     the mic gain with a resistor, or you have to use a mic that
     has a gain pot built in to it.

Hi all
I have a Belcom LS-102 and a Sommerkamp TS788DX ten meter rigs.
They are both converted to 27Mhz, does anyone know the conversion details so that I may convert them back or figure out a way of keeping both bands working?
Or if you know of any web sites dealing with this I'd appreciate the URL.
Thanks
Reg

I agree that you're very likely to be totally wrong. You mention AB, AB-1 and C. From that I really don't think you know the difference between AB1, AB2, B and C as they apply to solid-state amps.

In any case I'll answer the original author. X-Force stuff is good. Their Class B amps produce no additional distortion on SSB and still provide you with the maximum possible efficiency.

NOTE: the below is not a Flame. It is the Truth.

I will beging "MY" rant Now: CB is the forgotten band. The FCC does not give a rats ass about the band. Only, and only if it interferes with emergency communications or commercial communications. They are way too busy Play big brother to broadcast band radio, selling chuncks of radio spectrum to the highest bidder. And sometimes then they still don't give a crap.

Example: there was a local radio station that was doing a remote broadcast from a summertime function. The area that they were broadcasting from was quite close to the operator. He fired his amp up and proceded to cause so much intereference that his audio was rebroadcasted through the Stations equipment and ended having his audio broadcasted across The AM broadcast band. He has supposedly been reported (supposedly is the operative word) by a half-dozen or so Amature band operators. Well he's still out there.

There was another individual that was living close to the state patrol office and dispatch. He'd fire off his amp and cause havoc with there communication system. The even more revolting thing was he bragged about it over the air when he caught wind that he was interrupting their comm. systems. Where is he? you ask. Still out there doing the same stupid thing.

I remember when amps where a real under ground thing. People who didn't know how or where to get them weren't told. And you had to be in people pretty good to get one. When things where like that people where a little more cautious with how they ran them, or when they ran them. Now evreybody has one, wants one, or sells one. Nobody cares, not even the FCC.

I can't believe that the FCC with their all their intelligence, can't figure out there is a gold mine out there of fines just waiting to be written up. Now I believe that their is a time and place for power, but "EVERY GOD DAMN DAY?" Now I know some are going to post "well now your contradicting yourself." Well yes, with a reason. There are just TOO MANY DUMBSHITS WITH AMPS OUT THERE.

I have been on both sides of the fence I had an amp. I bought my first amp. in 1992. A Silver Eagle 350, for $165. Yes I went through that stomp, squish mantality. Until the novelty wore off, then I started to learn how to operate it more civilized. I quit using it to squish people, and used it in cases where people need help or needed info relayed to some one they couldn't get a hold of. Finally I really stoped using it at all. It sat in the glove box of my car, and only got used when needed in times of emergency. Then I got the bug again when a friend gota ahold of a power supply big enough to run it on a base. I got the itch to do some damage on the base I borrowed it from him one night to raise some hell. Needless to say it had a voltage regulation problem. First Key down the supply was putting out 14V after i unkeyed the supply voltage jumped up to around 18V. Next try, poof! those poor little MRF455's gave up there poor little lives trying to satisfy Ohms and Watts Laws. I deserved that!

Between 92 and now I have seen many amps. pop up on the radio, with these people that sit out there and Tune and load, whistle, adjust, and never have any real type of conversation on the air. All they want to know is if they are hitting you stronger. You tell them yes, but the sound like a there audio has been put through a blender on puree, and they are bleeding 6 channels up and down. They have the audacity to sit there and tell you that that is a sign of "Getting Out".

All these power jockey wannabe's, (Power Jockeys pertaining to ppl that run 1KW and up), sit out there all day striving to get that 1 extra fucking watt, which won't make a hill of beans difference in their signal. When I got out of my amp. owning and running streak the thing I did

was sell my amp. off to only selected people that (A) did not abuse the frequency or (B) was way
the hell out away from the county I lived In so I didn't have to hear the dumb bastard. Well
needless to say My last amp went out of state.

It's not that I tell you this to say I did it and you shouldn't, but most of these people out
here are adults, start acting like one and be a little more responsible. I honestly don't mind
if a CB'er has a amp. but don't abuse it. Yes it is illegal, and that's the law. But, so is
Fully auto-matic guns. People still have them, and use them.

I just get tired of hereing, HHHHHHHEEEEEEELLLLLOOOO, HHHEEELLLOO!, AAAAAAUUUUDDDDDIIIIOOO!, all
evening long. Or those that will try to play channel god and think they are all big and bad
cause they have an amp. And they can screw up your converstion if they don't like you. They
think they should be respected cause they can do this. I thought like that for a while until i
grew up and started acting like an adult. You take the power away from those people and watch
them get the shit stomped on. Buy stock setups.

"What are the two thing that can take forever to gain and seconds too lose.....Respect and
trust"

On contraire monfrair. A roger beep was designed to let the listening party, which you were
communcating with know when you where finished with your transmition. It is especially useful on
sideband even know you'll get your ass chewed for using one when DXing on SSB. I hate when people
get pissed with rodger beep's on sideband. Seeing that most of the time when you establish contact
with another station, be it skip or just a station in the bottom of the radio cause they live in a
RF hole, they tend to transmit when your still talking case sometimes you have paused for a
second, or conditions are unstable.

I know for sure that eveyone that has shot skip has ran into that problem.

Well have ya heard about the one of I think it was hasbro or some other toy manufacture trying
to sue a website for having the word clue in it cause the toy manufacture says they have rights
to the name. If I do beleive the courts told the company to take a hike.

You know you sound just like the guy that asked came to my father when we were
building boat
houses. He asked for advice cause he had never built one. When he asked a question
about some
thing a few seconds into explaining the how and why, the man would quickly reply
"well I knew
that", after about Four questions, and four "well I knew that."'s. My father
looked the guy in
the eyes and said, "Well if know all that you've asked me, why the hell are you
asking me then?"

Sounds to me like the same scinario.

You were given an opinion, Why? because YOU asked for one and know you want to
bite his head
off.

Seems to me that YOU came here for some answers, and you get a little fun poked at
you. You seem
to be going about it the wrong way. It sounds to me that YOU do not know much
about what you are
```

dealing with in terms of electronics. To me YOU just want someone to hold your hand on how to do
a modification cause your to cheap to take it to a shop. For once I will sit here and dside with
Toll.

I wouldn't give him a god damn bit of info. And I'll say it "DrBeltway, why don't you shell out
a couple 4 to $5000, and take you but down to your local community college and sit in class and
learn the theories behind electronics, and learn how to read a schematic. Also the difference
between a self-biasing circuit, and a voltage divider bias circuit. Then, Just maybe then YOU
won't have to ask some of these questions so YOU won't get pissed off when someone pokes a
little fun at you. Get bent, and hopefully thats what Toll will tell you to do too.

The greatest feeling I had when I first got my ATA in electronics was that now I could have
everybody think I was their personal electronics tech. that worked for free.

What could I do to my Cobra 142 GTL to get allot of power and modulation
on AM without running a linear? Do I need to get bigger coils to handle
the power? I want a powerhouse. I don't care if it weighs 100 lbs. when
i am done. What does cutting R104 do,what do VR6 and VR7 do? I don't
know allot about radios or modifications, but I am really interested in
learning so any information will be appreciated.
Mike

I'll have to agree with that I had help out a friend in need, and there were a lot of other
people that owed alot more than time to give a helping hand, but where were these dip sticks no

where to be found. I am Part, and help run a CB club, and let me tell you this. it's only the 10
to 20% that carry the weight.

All the ham'ers, church go'ers, and the "Yeah he'll hook ya up, I know him well" people. Can
kiss my ass. Cause who showed up, rooled up their sleves, and busted out the work. A group of
CB'ers.

I'll stop right here, Read carefully below to the post. What you posted is for
verbatim.

If the signal is an audible tone, it must last
no longer than 15 seconds at one time. If the signal is a subautible tone, it
may be transmitted continuously only as long as you are talking.

Sounds to me as if what you have written is saying a rodger beep is ok to use.

Hello ray It's easy to tell the flow of conversation when it's local and quiet.
But with all the
static, or being a long distance station call, and people jutting in between. It
gets alittle
hard to follow the "Normal Flow" and hear every "intelligent indicator".

I think you'd be better off just buying a Moonraker(rhombic)... it's not so easy building an antenna like this that will have good performance and survivability.

Hell you ain't gotta be an old timer. I've ran a CB for almost 8 years. And the
new brood of
CB'ers, And I bet it may be the same for hams (but I wouldn't know), they act like
16 year old
brats. Most of them are 30's to 40's I find it rather funny that they used to
conduct
delieveries of cookies at 1, 2 o'clock in the morning. The difference was I had to
earn my
respect on the radio. They (meaning a group of about a dozen or so all got radios,
and all
hooked up with power) thought that with power they should be respected. That went
the same with
a few that went ham, then came back to talk and had this attitude of "well Billy
thats not how
we do it in ham land, it done like this...". I was the whole talking down bit that
imediatly
pissed me off.

Just give Me 6 months of 30 s units of skip static 24-7 and they will leave.

I keep hearing these guys out there with some sort of digital microphone that captures one sound and will play the particular sound in a continuous loop for a long as several minutes or more. Not very considerate to others on the channel (me included).

Now I've always thought the people who were transmitting sound loops were using something like the Echo Max 2000. But even the Echo Max 2000 is only capabile of short bursts of continuous looping of sounds, before the sounds finally fade away.

What gives? Are these people in my area buying electric guitar digital signal processors and hooking them up to their CB's? My electric guitar effects board can digitally maniplate any sound and play it basically forever at whatever volume I select. Some synthesizer keyboards do the same.

Anyone know if new these are CB mikes these people are using?

Thanks,

Mark

Has anyone else come across a new FCC regulation for dealers and repair shops that require them to report the name and verified address of any illegal communications equipment received for repair such as amplifiers, radio that have modifications that let them transmit out of the band they were designed for. I understand that conviction carries a mandatory 60 day jail term, and a $10,000.00 fine if not reporting the they owner of the equipment.

Donald,
First you need to get your own email address so it doesn't look like
your wife or mother is as stupid as you appear to be.

Next lose the vulgar tag line. It puts you in a class by yourself. You
might not want to be in that class, but on the other hand, we know
exactly where you are coming from and how seriously to take your
comments.

Thanks for sharing that news release about the stupid mother killing her
baby. Goes right in there with the mother who put her newborn in the
microwave, but neither has anything to do with radio, so please post it
to another group.

Finally, for idiots such as yourself who have been operating for years
and trashing the frequencies for others, I'm sure everyone here is most
grateful. God forbid anyone should tell you to your face that you have
bad breath either. Don't want to offend you, even if you are offending
the rest of the CB community.

You need to start reading the alt.sex.something group. You might fit in
better over there.

I will try to use the short version here cause itend to get wordy and long, and go off on tangents.

Well as I know it Class A the output current, We will call Io flows for the entire cycle of the 360 Degrees of the input signal.

Class B The Io flows for approximately one-half of the input waveform. However two stages can be used to provide opposite half-cycles of the signal in the output.

I carefully re read what I wrote I see where I could be wrong on the class B part. Mayby thats cause I look at car stereo (My other hobbie) amps., and the RF amps under the same microscope.

See I'm used to having the pre-amp, and voltage amplifiers driving into two common collector trans. One for the Pos slope and one for the neg. Thats what I was going on for class AB.

Class C the current flows for less than one half of the input cycle. Typically operation is 120 degress of the Io during the pos half-cycle of the input. The result is produced by doubling the class B bias and using 2x as much signal drive.

And Class D is a class I don't even want to get into. I'll save that one for RAC.

That's giving the average cber too much credit, its more like a fifth
grade education.

just tell him ho to do it.. It's a full Wave antenna just take 11808/F(Mhz)
and that is the length of the antenna and then divide that by 2 and make a
full wave antenna for CB Band.

Also a moonraker Beam is not a Rhombic antenna.. It's not FULL wave.

Looks to me like Jack "don't know Jack" about this radio. The Grant XL in it's current form has not been around "that" long. The original Grant was an "858" board radio. I'd like to see Jack take an 858 board Grant and do the same mods to a new one.
If you want to misinform people, this is not the forum to do it in......YUO WILL BE CALLED ON YOUR SCREW UPS JACK ! ! ! ! !

****

Yes the magnetic field is a minimum at the ends of a half wave antenna. The electric fields are not. Then your response most likely forgot about the electric field. That is radiated also. An antenna radiated both an electric and magnetic field. The TEM radio wave that propogates thru the air is comprised of both a magnetic and an electric fields. That is why it is called a TEM wave, Transverse Electro-Magnetic wave. Power density and direction of the wave is described by the Poynting Vector which is the cross product of the electric field and the magnetic field.

The radiated power density from an antnenna is determined by the antenna's pattern function. This, when multiplied by the far field phasors for both the elctric field and the magnetic field, will determine the radiated power density and in what directions. For a half wave dipole the pattern function is somewhat simple:

[cos((PI/2*cos(theta))/sin(theta)]

By this funnction it becomes quite obvious that at the ends of a halfwave dipole the radiation pattern equals zero. This is why there is little energy radiated directly off the ends and most of the energy is radiated perpendicular to the antenna.

regards
james

Come on Wildcat, were did he say he was a ham? The world does not revolve around your paranoia of hams. Besides the Skywarn Nets are sponsored by the NWS so they must be of some use. They sure helped out in Floyd.
BTW I don't belong to the ARRL, Skywarn, etc., just enjoy the radio hobby be it CB, SWL, Scanner, or ham. Yes I do have other hobbies also.

Bill, did you jump on the x force wagon because of #12's input or his
designing of the bias circuit.
And is class "B" as efficient as class "C" For AM use.

You are going to need equal lengths of 75 ohm coax a 1/4 wave each  if I am
```

not mistaken out of each beam to make a matching section which then can be terminated into your 50 ohm coax of any length into your shack. You will end up with a Phased Array.

I just found out that Cobra has redesigned some of their CBs with NightWatch. I have seen pics and now I want one of these. The radio I am looking for is the 29WXNWST. I found one on Bills2Way internet site for around $129.00. This is the lowest price I have seen so far. 1st question I have is does anyone know of anyplace selling this radio cheaper? The 2nd question I have is that I want to sell my 29WX-ST. I have seen some of the 25's going for around $70 on EBay. My radio was purchased in Nov. or Dec. of last year. I need to know what a fair value on the radio is. It is basically in near mint condition. I saw near mint because it is used and I have no box for it. I do have the manul and everything that comes with it. So what should I ask for it? I don't want to go no less than $70. Does anyone want to buy it? Or should I take my chances with E-Bay? Thanks, ryan

Your post referred to the "grant XL" as CLEARLY stated in the subject header. The Grant XL started life as a 858 board radio and this was the topic of discussion. Something tells me I'm not the guy you really want to get into it with as far as radio mods go Bubba!!!!

Folks,

I am the writer who has been posting a notice about research I am doing. I did not know that it is illegal for someone to tell what is heard when scanning. (I told you I was finding my way around!) Someone emailed explaining this. Sorry, I didn't intend to put anyone in a compromising position.

Regards,

Thomas

Before we get too far off the question, <:, a 1/2 dipole was not the antenna in question. The original description was about a 1/4 wave whip. Also, how does all of this explain why it's easier to light a fluorescent tube at the top rather than the bottom of the antenna? The antenna I use is a KW-7. A 4 watt tube taped to the top lights everytime, barefoot! I have also seen the light lite at the ends of a dipole.

After your last blast, I shouldn't answer you...

A single blast of lightening consists of several strikes through
the same path. It happens so fast you see it as one strike.

> if they did it with ham gear.

Thats the stupidest thing I've heard,since when does ham gear cost more? The wire to build a 10 element vertical Yagi(or any other 10M antenna)is cheaper than building one for 11M.

Some of the low power rigs are cheaper than a 148GTL.Sure you CAN spend more but the quality and performance is there,the best CB stuff isn't all that great,wish it was.

Actually it's easier to talk all over the world on 10 than on 11 because it isn't so crowded ,the ops are usually a little more polite,there are many good reflectors,the forieghn ops speak english,the forieghn ops run the same freqs we do.

I have a wierd situation I was hoping someone here might be able to help with. I'm using a Midland 79-290 radio with a Big Foot 1/4 wave antenna. When I transmit with the radio on AM, I don't get a full scale, it goes up to about S8. When I hooked up the SWR meter to the radio, it went to full scale when I keyed up. Any idea why this might happen? Does the lower reading on the scale when I don't have the SWR meter hooked up indicate a problem? With the meter hooked up, I show less than a 1.5 SWR with power on AM around 4 watts. I had a Wilson 500 hooked up to it and I got a full scale with that antenna, but when I tested it, I got an SWR of 3.0, so I obviously have to go with the Big Foot antenna.

The meter will deflect differently depending on the match presented to the
transmitter. This is very normal...

go tell your neighbor to buy a filter.....and you can buy some little square rf
chokes at radio shack that go on your electric appliance that is being
interferred with......very easy to use!!!
dont get him in trouble.....thats not nice

Okay.

> Should I be looking for a
> leaky cap that is grounding out my input somewhat ?

That's a possibility. Scope the input signal path to make sure the input signal isn't being attenuated too much on it's way to the cathodes. You say the tubes tested 75%; is that on a gain (transconductance) test or an emission test? Sweep tubes will show good on an emission test even when their gain is low. Check the input (beteween radio and amp) SWR to make sure the amp's input circuit is fairly resonant with respect to the radio.

> Is -14V about right
> for bias on g2

No, it should be lower than that. As the grid goes negative the bias decreases. To increase the resting plate current the grid has to be made more positive with respect to the cathode. On the other hand, if the tubes are flat, the bias voltage could be correct but there's just not enough emission to cause the proper amount of resting plate current. I'd feel alot better if you could provide transconductance figures for those tubes. As I remember, that amp originally used 8950s just like the 700-CX transceiver used in it's TX output stage. I may be wrong, as it would be alot of work for nothing to change from duodecar sockets to novar sockets. In any case, you should expect at least 10 dB from that amp. That means 100 out for 10 in. So, either the input signal is being attenuated, the output is out of resonance (if that were the case you'd probably notice the excess plate dissipation right away), or something is effecting the amp's ability to produce an adequate gain. You need to be able to explore all of those possibilities.

> tnx Mark

Toll, they would not allow it at most breaks , Mulehead who runs a dave 1 alt 3000 mobile ran one of the Leece Neville 300 ampers I beleive the one that is used on locomotives in Augusta, and a few other breaks he whipped ass and they said no more . Most consider 1 alt to be a leece neville 250 or smaller. People are afraid of the unknown

Look dude... If your gonna blow up on us please do it in another newsgroup... All CBers are equal in my eyes. Im 15 and people think im wierd that i like CBs but i dont let it get to me. Just back off. If we want to ask about a check on weather we wanna know if we should be prepaired for the weather in the next state like put chains on the tires if its going to get worse. Another thing is if you just baught a new splatter stick you want to see if it was worth the investment when you baught it. Your checking to see if you baught a piece of crap or a quality antenna. now that i have said my peace on you... you might want to crawl back into that hole that you came out of and realize that us "UNREGISTERED" CBers will always be here to piss you off...

Thank you!

Mobile Unit 125 and a half goin on the 10-7
Good hunting!!

That's not true. Participating here and having an open mind is proof of that.

> Idiots tuning radios have
> been ripping these parts out of this
> radio since the mid 70's.

Because you don't agree with the method you call the people who apply it idiots. However, just telling people not to do something isn't enough. Put your experience where your mouth is. Tell us why it's the wrong thing to do and what is the more appropriate thing to do.

> This is
> something OLD.

That just backs up the fact that it's not a bad thing to do. If it were such a bad thing it still wouldn't be so commonly done.

> "You Don't Know Jack"

I'm certainly glad I don't know you.

In my opinion, you're just another puke that can't get past the word "illegal." The problem is that you're a tech and you do your customers a disservice by purposely limiting the performance of their radios because of your belief system. I'm sure you take in tune up jobs too. I've seen guys like you. You take the customer's money, set the carrier wattage at 4, the AMC at 100% modulation, the ALC at 12 watts PEP, and give the radio back to the customer saying that it's doing "all it can," "all it should" or some other crap to that effect. It bothers you when other techs remove limiter transistors, but lying to and short-changing your customers when it comes to their radio's performance doesn't bother you.

Think about it.

Yes I did. Rhombics come in various sizes. The moonraker in my book is a rohmbic array. See http://users.neca.com/cummings/rhombic.html for some interesting info.

Rhombics can have great size variations. The one shown out there huge but have the same shape as a moonraker element. If a moonraker is not a rhombic... then what would you classify it as?

SWR is always the concern with performance. Don't try to select an antenna
that puts the meter in a certain spot you think is right... make the antenna
match right and then look at where the meter falls. If you don't like the
meter position, merely adjust the meter deflection inside the set with the
potentiometer.

Do you even know what a rhombic antenna is?  it is a FULL Wave antenna.  Moon
raker is far from being Full wave even stacked.  you take the horizontal and
vertical driven element and see if there as long as the formula that I give
you is.  I bet it is not.

Rhombic = 11808 / F(Mhz) = total length.

11808 / 27.205 = 434.403 feet..  No way would you have a moonraker stacked at
even 200 feet.

My opinion is that a moonraker has full wave elements for 11 meters.
Roughly 9' on each side of each element...
Maybe stacked is the wrong word... implying several complete antennas...
maybe a four element rhombic array would be a better term for a moonraker.

> when
> i am done.

     Then why are you against running an amp?
```

Amplifiers are designed to deal with the extra heat and
DC input power required to produce "powerhouse" levels
of output power--radios alone are not.

A simple tune-up and a $100 amp will blow away ANY mod
that ANYONE could do to that radio at ANY price simply
because the radio is limited by how much DC input power
and heat it can deal with. Look at the radios that
make 100 watts--they have linear amplifiers either
hanging out the back or hanging off the bottom AND they
don't perform as well as an equivalent separate radio/amp
combo.

Just suck it up and face the fact that if you really
want a "powerhouse" you'll HAVE to use an amp.

> What does cutting R104 do,what do VR6 and VR7 do? I don't
> know allot about radios or modifications, but I am really interested in
> learning so any information will be appreciated.

Bypass the modulation limiter (remove TR32), set the carrier
(dead-key) wattage at 2 (that's what VR6 does, VR7 sets the
SSB output power), peak L36 for maximum MODULATED output power,
and buy an amp.

the electrostatic field requires the associated magnetic wave to propagate
with out the magnetic field the electrostatic field will decrease at a high rate
with increase in distance

normally becoming negligible about 1 to 2 miles from the antenna

>
>The radiated power density from an antnenna is determined by the antenna's

>and in what directions. For a half wave dipole the pattern function is somewhat
>simple:

Yes but that is a complicated way of puting it
If you take two points along the antenna.
at right angles to the plane of the antenna
the fields will add
the grater the angle the phase differece will increase
and the instantaneous field level will go down
along the plane of the antenna the phases will cancel

>
>[cos((PI/2*cos(theta))/sin(theta)]
>

that is the formula for a half wave dipole in free space
this has nothing to do with the amount of power radiated
at points along the antenna
it deals with the direction the power is radiated

>By this funnction it becomes quite obvious that at the ends of a halfwave dipole
>the radiation pattern equals zero. This is why there is little energy radiated
>directly off the ends and most of the energy is radiated perpendicular to the

>antenna.
Yes that is correct

I am talking about at what point the power is radiated along the antenna
not the place it will go

the florescent tube is in a high voltige field
it is like a tesla coil but it has a 100+ volts at 27Mc or so
not a Mv or so at 100kc

at the top the voltage will ionize the gas in the tube
at the bottom it is only 15 to 20 volts which will not ionize the gas

it don't nead to contact it the capacitive affects will couple the
required voltage to do the job

10-7 wrote:
>
> Bill, did you jump on the x force wagon because of #12's input or his
> designing of the bias circuit.

     Yes.  I also had a hand in designing that bias circuit because
     Dennis and I were both doing alot of bias circuit experimentation
     back when the X-Force bias design was on the drawing board.  We
     pooled the info that was the result of our research.  The result
     is fantastic but expensive in CB amp terms.  Fully regulated with
     proper temperature tracking is all you could hope for and it's
     there in the X-Force product.

     Also, I have a ton of respect for Dennis.  He's good with this
     CB amp stuff.  I have to admit that Dave may be even better, but
     I have to go with who and what I know.  Dennis has been here and
     earned my respect.  I have tons of pictures and anecdotal reports
```

that say the X-Force product is top-drawer. I've never corresponded with Dave, and no one I know uses his product. What can/should I do? I stay neutral with respect to Dave--that's all I can do.

If you look back, I've tried to be neutral all along. I'm on the west coast; I don't see the high-end stuff that's prevalent in the mid-west, south and east. Out here it's Pirate and Skullcracka; which, in my opinion, are both substandard compared to Dave Made and X-Force. I'm finally starting to form opinions as to the highest end stuff, but I have to (for the time being) give the nod to X-Force based on personal experience. On the other hand, if you look at my posts, you'll find that I usually mention both as though they're equals. Alot of that is based on what you've said in the past about X-Force starting out as a Dave Made clone. I choose to believe that and figure that everytime someone says something good about the X-Force product he's also complimenting the Dave Made product.

The best I can do is to say that either is a good choice but that I have a more direct connection to X-Force so my posts may tend to lean in that direction.

> And is class "B" as efficient as class "C" For AM use.

Not as efficient, but it provides extra gain that could be helpful in certain applications.

On SSB, Class B bias is the most efficient class of operation when no audible distortion is a requirement. You have to remember that solid-state CB amps that have no positive DC bias applied are not true Class C amps. They are just on the Class C side of Class B. That's why they produce a distorted but useable signal on SSB. A true Class C RF amp using bipolar transistors has to have a NEGATIVE DC bias applied to the bases of the transistors. That's never the case with CB amps.

There are several approaches to the 8719 channel mod. That's probably why you saw so many. Since you're a newbie, you should go with the easiest and most common mod. The easiest mod is to set up two switches; they can be front panel switches that you isolate, or they can be switches
that you add on. In any case, one switch should be set up to ground pin 10, and the other should be set up to connect pins 11 and 12 together. That's all there is to it. The coverage (with a few gaps) will be 26.815
(15 channels below channel 1) to 28.045 (64 channels above channel 40). After you've done the mod, don't go nuts with the high channels. The radio is only designed to cover the original 40. When you go outside that range the performance drops off. You can use all 15 lower channels,
but I wouldn't venture above 27.805 unless you're talking to someone locally that has a strong signal.

Good luck and have fun.

$110. No one has bid on it yet because of that. If the guy was smart he'd of set the reserve at $110 and the starting bid at zero or $5. He shot himself in the foot in that he doesn't know proper auction strategy. The idea is to start the bidding low. Then, hopefully, you'll get 2 or 3 guys trying to outbid each other in order to "claim the prize." I've seen that strategy work to the seller's advantage time after time. For example, if you manage to get 2 or 3 guys going at it, you can end up getting 2 or 3 times the reserve (the least you expected to get) easily. On the other hand, I've watched decent deals (like this 79-290) die on the vine (never get a first bid) because the seller set the first (minimum) bid too high. The mistake is that the seller

is setting the minimum bid and the reserve at the same price. The
reserve is unknown to the bidders, but the minimum bid is not. It's
common sense; set the reserve at the lowest price you'll accept,
and set the minimum bid low to generate interest in your item. If
the reserve is not met you're not obligated to sell the item. What
could be easier? The problem is that alot of the users of E-Bay
(and probably every other auction site) just don't understand basic
auction strategy.

Substitute a dummy load for the antenna and note what the radio's
meter says. When you hook an antenna to the radio you should see
the same thing when the antenna is tuned correctly.

Probably; based on what you said the SWR was with the
1/4 wave.

> I'm not experiencing reduced performance?

```
     That's another good indicator that everything is okay.

     Again, a way to be sure is to sub in a dummy load and
     see what the radio's meter does.  In my experience,
     the meter shouldn't read full scale unless the SWR
     is high.  Normally, the reading will be two-thirds
     to three-quarters and will increase when you modulate
     steadily (whistle, hum or hold the first syllable of
     a word like "audio").

     Check it out and see what you come up with.

Fortunately, power supplies work in average power while CB amps are commonly rated in peak power.

So, a 10 amp at 14 volt regulated supply can provide 140 average watts. CB amps are about 50% efficient, so a 140 average watt power supply can run a 70 average watt amp. So, a CB amp that's called a 225 but only peaks at 180 will only hold a 60 watt average on most of today's high-end wattmeters (like Bird and Coaxial Dynamics). So, in reality, if you're not overdriving the amp with dead-key input, a good 10 amp supply will run a 225 on AM.

On SSB it's a different story. The rule of thumb is to double the AM current draw when considering SSB use. That means our 225 requires a

good 20 amp supply if the owner expects to successfully use the amp to
it's full potential on SSB.

That completes today's lesson in Amplifiers 101. This material WILL
be on the final exam. ;-P

A mediocre beam beats a great omni. Run both. Put a conservative
beam (2 to 4 elements) on the tower, and the A-99 on the house.
It's a no-brainer. You're wasting the tower by only using it
to support an omni.

I would not recommend this thing to anyone because I had one in a Cobra 25 and sometimes it was ok and others it freaked out the radio so bad that it sounded like shit. Deadkeyed 20 and swung to 70 on a good day. Just buy an external amp and don't waste your time!!!

The freq mod is super easy for the tech with the info. The job is to find him. If all else fails, send me the control head and $15. I'll do the mod and send the control head back.

> open the
> clairifier

The coarse clarifier control is already opened. It's opened from the factory. Just don't tell anybody. ;-)

> and turn down the watts (if needed) to drive my amp.

If all else fails, I can do that for you too. Remember that Q33 has to be removed too (for max modulation in all modes). It's especially important when the dead-key is set to a low value.

I do the whole mess for $40 including some broadband tuning that I'm not mentioning here.

If all else fails, I can do your radio for $50. That's $40 plus $10 for return (conus) shipping.

If you become interested my e-mail address is good.

Good luck and 73.

If you go with a set of stacked threes you can use a longer

mast pipe and put both the omni and the beams on the same
tower. It works like a charm.

> them.

I agree. Unfortunately, the only one I've been able to listen
to is Dennis. I'd like to learn from both. In fact, what I'd
really like to do is set up situations where I could pit one
against the other. Each one of those battles would undoubtedly
expand the envelope of CB amp technology for all of us.

> > I stay neutral with respect to Dave--that's all I can do. If you look
> back, I've tried to be neutral all along.
> --

> thats fair enough, and i would agree you have been.

Thanks. I realize that I'm farting around in an area where I
really don't belong due to where I live. It would be really
easy for people to tell me I don't know what I'm talking about
and I'd very likely have to agree. I try to answer questions
without stepping on toes--but I can't always do that to everyone's
satisfaction.

> Alot of that is based on what you've
> > said in the past about X-Force starting out as a Dave Made clone.
> --
> --------------------------
> and they still are from the ones i have seen first hand, not counting the
> base amps

There you go. I agree. The base amps are the ones that are
heavily influenced by Dennis. What's interesting to note is
that the mobiles are beginning to go in the Dennis direction
too. In a year or two X-Force and Dave Made will very likely
be different enough to be honestly considered to be separate
entities. At that point we'll be back to using competition
results as the only measure of which one is better.

Thanks for the reply Bill.

You're more than welcome.

The amount that you have to pay E-Bay is nothing--and they'll let you post the same item again if it doesn't sell for free. Think about it. E-Bay sets the rules. They set up the reserve and minimum bid systems. They pretty much lead you to the strategy that I laid out. Look at say a dozen successful auctions and tell me what the common threads were throughout those auctions. I guarantee that you'll notice a low minimum bid, a well written explanation of the item and terms, and at least one decent picture of the item. What I've just laid out is as close to a formula for success as you can get.

Because of the reserve system that E-Bay uses, there's no reason whatsoever to set the minimum bid at any more than $5. If the reserve is not met, you're not obligated to sell the item. It's that simple. The reserve is not disclosed to the bidders; therefore, they don't know whether they might be getting a killer deal or not. That's the trick. Use the hidden variable to your advantage.

Also, what makes you think setting a high minimum bid will guarantee that the item will sell? It's just as likely that a high minimum bid will prevent anyone from bidding on the item. In fact, that how it usually goes. People bid when they think they can score a killer deal. A high minimum bid guarantees them that they won't score a killer deal.

I hope this helps.

You just got a bad one. In general they aren't that bad. All mass produced 10 meter rigs have to meet production cost guidelines; therefore, none of them are 100% bulletproof. I've said it before

```
and I'll say it again, ALL serious CBers need to have backup equip-
ment.  A backup radio, a backup mic, and a backup antenna are required
these days due to the corners the manufacturers have to cut to meet
production cost guidelines.

The turbo mike will NOT do continuous sound loops, nor is there a "sampling" mike. There is a device that will record up to 20 sec., and that could repeat over and over, other than that it would be as Wildcat said which would be musical effects equipment.

i have seen some radio, antenna combinations give strange readings.
if the swr was high, it seemed as though the higher swr reading would "draw" more power from the radio hense a higher meter reading. the lower swr would result in a lower meter reading. a different brand of radio on the same high swr antenna setting would result in a lower power output.
i'm not sure what processes were at work there but this was my observation.
the only thing that i can think of would be some high swr protection circuit inside the radio which do exist.
good luck

jeff

A Moonraker is a yagi and not a rhombic antenna.

Gino:

1) how much property do you have?
2) where do you wish the main lobe to point.
3) Do you have access to large wattage no inductive resistors in th evlaue of 300 to 2000 Ohms?

for a terminated rhombic the terminating resistance will be 300 to 800 Ohms. The actual termination resistance will depend on the characteristic impedance of the antenna itself. Depending on the tilt angle the length of each leg of the rhombus will vary. For a tilt angle of 60 degrees the optimum length of each leg is 2 wavelengths. Thus you will need to have about 144 feet or 88 meters of wire.

for a unterminated rhombic, the length of wire on each leg should be resonant lengths. Unterminated rhombics take more care in tuning than the terminated variety. Also it is good to get the whole structure at least 1 wavelength above ground.

regards
james

In fact the rhombic is longer than a full wavelength. In order to get a decent gain and directivity out of a rhombic the leg length should be 4 to 5 wavelengths per leg. At 11 meters you are looking at 166 to 200 meters of wire to make up the antenna.

simple. a 1/4 wave antenna is nothing more than a 1/2 wavlength antenna cut in half. Fed at the same point that a 1/2 wave antenna would be, the impedance at the rfeed point is about half that of the center fed dipole. The end of a 1/4 wavelength antenna will also be a voltage maximum like that of a 1/2 center fed dipole. Thus the center fed dipole and a 1/4 wavelongth vertical will have high voltage at the opposite end from the end. Since it is the elcetric field at the end of the antenna that will excite the gas in a flouresent tube, a 1/4 wave vertical and a center fed dipole will both ligth up a flourescent tube.

>answering machine with no return call.. What do you think on their Son of a
Gun base antenna...Also, I do run 213 coax, it is a 100 foot run<

1. I think the Jo Gunn verticals are a waste of money. The Maco V58 is a better antenna (so I've heard) for less $. The Imax 2000 IS a better antenna, for I have one and have previously wasted $ on a Jo Gunn. I modified my Imax and put a modified Maco GPK on it.
2. I have usually in the past used Belden 9913. I made the mistake of changing to RG213 once, (much increased RFI/TVI), went back to 9913, would also recommend the few extra cents per ft. and get the Times Microwave LMR400.

****

In the case of energy being radiated off an antenna we no longer have staic conditions. The electirc field produced off of an antenna is directly related to the current flowing through that antenna. You must also take into consideration that in antennae with no rective copmponents, The current is a sinusoidal waveform. It does not matter if it is a 1/2 wavlength dipole or a 1/4 wavelength vertical. The current and voltage in the antenna is sinusoidal. The energy being radiated from the antena is radiated from the whole antenna not matter how it is constructed. The current is flowing thru the whole antenna. It never flows thru just a part of it. Durin one cycle the current at the feed will be a maximum at 0 and at 180 degrees. At 90 and 270 degrees the current will be a minimum. The voltage at the feed will be out of phase by 90 degrees. Thus at the end of the antenna, when the current is minimum, the voltage will be maximum. at other time the voltge will be a minimum and the current will be a maximum.

Try and see this example.

Sound is reproduced when say a guitar string is plucked. The wave produced off the string is controled by the length and the whole string is vibrating. So is the same for RF. Like the giutar string, the RF energy radiated uses the whole antenna.

Now reactive components alter the current distribution within the antenna. Current will still flow thruogh the whole antenna. It no longer will be a sine or cosine function. The reactive component sees to that. A load coil will not stop an antenna from radiating above it. It will affect the pattern function. Thus the pattern off the antenna is distorted from that with no reactive components.

Yes the plane wave that radiates off of it needs both the elcetric and the magnetic fields. Poynting's vector requires both. The definition of a plane wave needs both.

The energy in the plane wave is alternating back and forth between the magnetic and the electric field as it propogates. That propogation is either throuogh ground waves or sky waves.

A good quality ext power supplied meter will normally show true readings and keep inline impedance constant. A cheaper meter will change impedance and tx meter circuit characteristic's. Put the swr meter at the antenna connection and see if you get the same results. I think you will not get the same differences.Hence meter quality?

You Should Stop This Nonsense,,,, Now.
Before You Are Too Numb,,,,
To Realise It's Not Good.
BUT.... Some times,,,
You have to stick up for your self.
It's A Bloody Mess Is It Not ?
I expect the only way to solve these problems,,,
Is To,,,, Thrash it out in this theatre ????

I was just curious if anyone had heard any other reports about shoddy quality in 2950's in the past couple of years. I have a 2950 that was bought in the last couple of years, and it had more cold solder joints and loose connections than I could count. I spent 3 hours repairing the board. Now the damn power connector on the radio came loose and shorted out inside the radio. Now I cant get it to power up without it blowing a fuse. Should I give up on rangers now or what?

Thank you everyone for your help. I feel more confident that my radio is up to par. Now I just have to find a tech that can do the freq mod, open the clairifier and turn down the watts (if needed) to drive my amp.

I've turned the AMC pot (VR5,) to increase modulation on AM but it doesn't scream like my peaked Cobra 25 or TRC-485. I noticed that there is a mod for the Cobra 146 in which you clip resistor Q29 for the AMC. On my 640 Q29 is next to the AMC (VR5.) Will this mod work on my radio also? Thanks in advance.

Yeah Bill, and you have dreams about someday knowing what you're talking about!

Guys like you have been butchering radios like this for over 30 years! Guys like me (and there are damn few) spend our days explaining to our customers why guys like you do things like this to their radio equipment! Remember, I'm the "no parts in, no parts out guy"! You have the figures all wrong! I'm the guy who uses peak reading measuring equipment to measure the power output of am and ssb transmitters! (stupid me) I'm the guy who can get 30 watts ssb and 25 watts am out of a 148gtl/Grant XL without destroying the amc/alc circuitry! Somewhere down the line you got this idea that if you can't do it then it can't be done! And you're the one with the open mind?

Just because everyone does something the wrong way doesn't mean it's the right way to do it! That's the kind of abstract thinking that i've learned to expect from you!

Obviously you haven't been paying any attention to any of my previous posts here so what's this bs about participation? And I have never used the word illegal on this ng! You can't have any participation with someone who can't remember what someone else posted! If you don't know me then how can you make the statement that you've "seen guys like me"? You're so full of self contradictions that you don't know whether you're coming or going!

What is apparent to me as well as others here in this ng is that you think yourself to be some kind of authority figure when it comes to communications. My question is, if you're so damn sharp, why aren't you in some ham newsgroup instead of hanging out here peddling your wares?

Is it because by comparison, you pale in the presence of your peers?

Go into to one of the ham newsgroups and try to convince some of those guys to disable the alc circuits in their expensive amateur transceivers and amplifiers. See how many of them follow your advice! Or maybe you have tried that only to have them laugh you out of the ng and that's what you're doing here! I would simply put this to you....that maybe you think more highly of yourself than you ought to!

That maybe you find yourself talking up to fellow amateurs, and finding less resistance talking down to cber's is somewhat more to your liking because it affords you some illusional "perch of authority"!

Your answer is to broaden those signals, increase the splatter, damn those thd products and full speed ahead.

This is the old way and it's been going on for far too long! The time is long overdue........it's time to realize that we don't have any consideration for our fellow operators when we operate

"trashy" equipment such as this within
the narrow spectrum which is cb radio!
I may be a lot of things, but closed
minded is not one of them!

Jack

Looks like someone failed geometry!

The root word is "rhomboid"
rhomboid \Rhom"boid\ (r[o^]m"boid), n. [Gr. ??? rhomboidal; ??? rhomb
+ e'i^dos shape: cf. F.
rhombo["i]de.] (Geom.) An oblique-angled parallelogram like a rhomb,
but having only the opposite
sides equal, the length and with being different.

1. (Geom.) An equilateral
parallelogram, or quadrilateral figure whose sides are equal and the
opposite sides parallel. The angles
may be unequal, two being obtuse and two acute, as in the cut, or the
angles may be equal, in which

case it is usually called a square.

If you size it up we are only trying to have fun, its not like we are robbing a bank or harming these certain CB cops kids, or breaking into there house. Simply put just good clean fun, thats all. most of the guys who try to police illegal cb use are probably trying to fit an image that they think comes with the ham radio hobby, I have a lot of friends that hold their amateur license and they do not act like this, they are more concerned with real life values, not something that makes about as much sense as "who didn't come to a complete stop at the stop sign in front of the school today?" even though they were only driving 10 miles an hour. man give me a break man, they had just as much fun when they talked across the world on their cb radio, me personally, I think that they are all very bored, enjoy bosting to their friends about how screwed up the cb is, anyway I agree that it is cool that these guys try to help, and I will continue to try and help, even if the cb cops disagree!!!!!!!!!!!!!!!!

Dat 10 ohm smoke,
Sure make you choke,
Da more dat smoke,
Da more ya broke,
Damn dat 10 ohm smoke!!!!

I am looking for Mods for the Cobra 18WXST or is there a Cobra radio so close that its mods will work....
Advice on the best antenna to mount on the roof of a Cherokee (can't go much over 2 feet) would be wonderful.
I am replacing the existing equipment which is very poor.

The different readings come from the different amount of reflections on the
line caused by the conjugate match.

Good morning friends and welcome to another episode of "The Bowl". This morning on the bowl, we heard several folks complaining about high income taxes. Boy were they worked up! Of course, these folks have never actually paid income tax, since that would neccessitate having had been employed at some point. We know they are not employed since they seem to be on CB radio 24 hours a day. These CB Sociologists, let's call them, rant and piss and moan about government, although admittedly they don't vote! Let's see now...they don't work, don't vote, and spend all their time bitching on "the bowl." They collect government subsidies, yet seem to have plenty of dough for the latest Taiwanese splashbox, echovomit microphone with rogergeek, Texas Spur amplifier (transmits on all forty!), and I-Spaz antenny.Oh... I forgot to mention these folks are white. Irrelevant you say? Not at all friends; these are not the self styled, disenfranchised, people of color. Nor are they refugees from some far-flung war worn land. Nor are they disabled in any way. No friends... these are typical, low-life, uneducated, unwashed, white trash CB RADIO OPERATORS. Exactly like some of you reading this message. The good word from here is...GET A LIFE YOU LOSERS! Stop smoking those Marlboros and eating Wendy's at the Microphone all day. Use your welfare checks to better yourselves, or better yet, get a job! We now have the lowest unemployment rate in 30 years. You have no excuse anymore! Show some respect for yourselves and read a damn book. Do something, but for God's sake; get off your dead ass and get off the bowl. It's killing the last vestiges of brain cells you ever had. And the scary part is...they don't grow back!

Check e-bay policies again. E-bay now charges for reserve auctions. It's
not a lot depending on the price of what you are selling but it does add up
if you are selling a lot of different things. My Fianc� and myself do a lot
of selling on e-bay and believe me the charges can add up over a few months.

It's just polite to use lower case letters when on the internet. Upper case
is for increased emphasis or 'yelling.' As long as you continue to use
upper case letters when you try and converse anywhere on the internet people
will continue to ask you to 'lower your voice.' Either you can fight it,
resorting to more and more abusive and loud speech, or you can just hit that

little button on the left side of your keyboard (caps lock) and join the
rest of the community speaking in a level tone and not YELLING!

Jim

I'm sure but the book changes every year. It could be a different
chapter in your book if you have a different year. I'm looking at
the 1989 ARRL Handbook. Page 16-14. Go see for yourself.

A Moonraker may have a rhombus shape but it is not the type of antenna people are refering to when they talk about a rhombic antenna.That would be like saying that a carp skeleton at the end of your feedline is a fisfbone antenna and maybe in your mind it is but it is not what people are talking about when they mention a fishbone antenna.

By the way, it is also in the 1987 manual on page 16-14. It is figure 24. It is probably reasonable to assume that it is in the 1988 manual as well.

Even if your ARRL manual does not have the graph, it would surprise me if it didn't have some text regarding the effect of line loss on the VSWR measurement at the input of the transmission line. Let me quote what the 1987 book says:

"The VSWR as measured at the input or transmitter end of the line will be less [than at the load], depending on th eline attenuation. It is not alway convenient to measure VSWR directly at the antenna. By using the graph shown in Fig. 24, however, you can obtain the VSWR at the load by measuring it at the input to the transmission line and using the known (or estimated) loss of the transmission line.

"For example, if the VSWR at the transmitter endo of a line is measured as 3 to 1 and the line is known to have a total attenuation (under matched conditions) of 1 dB, the VSWR at the load end of the line will be 4.4 to 1."

Satisfied?

By the way, this directly contradicts Toll Free' claims.
Toll Free said:
> No you won't. You see different SWR readings due to voltage standing
> waves on the coax... Not due to the losses in coax!

Whom do you believe? ...the ARRL or Toll Free?

The stinger 100 was never biased for ssb.  It also had 1 MRF 455.  It had a
preamp and on/off also.  This board never worked very well as the RF
circulating thru the radio developed oscillation and major shielding had to be
used.  Average output was about 55 watts PEP.  Also this unit was made by the
same folks that made the Elite Black Face Units.

no and i don't think you have either. this, i'm guessing, is why you posted this as a question.
since the fcc removed the requirement of a license to repair cb radios, this would effectively remove the shop from the fcc's control unless he did the mods. it's not the shop's responsibility to play rf cop.
how would he "verify" the address, go follow the radio owner home? not my job.
i heard about 10 years ago that if you sent a president 2510 back to uniden for repair that had the cb mods, they would turn you in voluntarally.

O
snip

>Yes. Changing the length of the coax does not affect the SWR.
>It is a fact.

True, but changing the line length (tuned line) can do the same thing
as a line flattener or a transmatch. It can change the SWR reading.
This is a real indication of the load the transmitter sees.

>In the case of energy being radiated off an antenna we no longer have staic
>conditions. The electirc field produced off of an antenna is directly related to
>the current flowing through that antenna. You must also take into consideration
>that in antennae with no rective copmponents, The current is a sinusoidal
>waveform. It does not matter if it is a 1/2 wavlength dipole or a 1/4 wavelength
>vertical. The current and voltage in the antenna is sinusoidal. The energy being
>radiated from the antena is radiated from the whole antenna not matter how it is
>constructed. The current is flowing thru the whole antenna. It never flows thru
>just a part of it. Durin one cycle the current at the feed will be a maximum at
>0 and at 180 degrees.

yes

> At 90 and 270 degrees the current will be a minimum. The
>voltage at the feed will be out of phase by 90 degrees. Thus at the end of the
>antenna, when the current is minimum, the voltage will be maximum. at other time
>the voltge will be a minimum and the current will be a maximum.

at 0 and 180 degrees
the feed point current and voltage is at maximum the current
at the end of the antenna will be zero and voltage will be minimum

at 90 and 270 degrees the feed point current and voltage is minimum
at the end of the antenna the current is zero and voltage is maximum

at that instant the current going to the end and the current coming back
is the same value and 180 degrees out of phase so you have
no induced current flow

at 0 and 180 the current going out of the feed point and coming back
i in phase so you have maximum induced current flow with that current
flow you have voltage drop and therby power used or radiated

you nead voltage and current to get power
at 90 and 270 you have high voltage but zero induced current
at 0 and 180 you have maximum current and the voltage drop
the comes with the radiatinon reseistance that is when you
get maximum radiated power

some books state that the antenna radiates electrostatic waves
and some state it radiates magnetic waves
some say it radiates both
to this day it is all theory
they have not even ben able to disprove ether
what a person thinks just depends on what school you come from

if someone states that this is the way the antenna radiates and
every other idea is wrong that just means they think it has ben
proven and noting has

(point) is light a wave or a particle

>>
i don't have a date for it but i had such a comsat and it DID have a 100 mw
switch stock. the law back then was 100 mw with an antenna less than 5 feet
long. i suspect that the switch was there for the lowest power nessessary for
close in comms.
a 100 mw walkie talkie will talk 1 mile on a 1/2 ground plane. i know, i've
tried it as an experiment.

Maybe your existing equipment is poor because your antenna is
too short. Anything you put on a 2 foot antenna will suck.

I don't care for base loaded magnet mounts, but it might be the
best choice for you because you can take it off to go in tight
places.

I don't think there are any mods for that radio. Nothing at
http://spike.forfree.at/~skinner/ or
http://www.angelfire.com/ks/cbmods/

for that radio.

>Can someone tell me what this amp will put out and if its any good?

I had a Thunderbolt 101 back in the early 90's, for the buck it's one of the best amps around, extremely clean, well made and not a single problem.

Most of the time I ran 4W AM which gave me 70-75W out, SSB 12W with 125-150 out.

The amp uses two 6LQ6's which can be hard to find locally so if you purchase
the amp make sure to have a pair of replacements just in case.

thank you for getting down from your high horse and sitting on your throne and
giving us those words of wisdom.
for the people who DO do the things that you say, it is too bad, isn't it.
for the rest of us who have gone beyond the 8th grade but go on to the

out-bands, talk skip inteligently, use somewhat higher power but make great effort to keep our equipment clean, and really do use manners ie; ask for breaks, don't step on others, keep our beams off from a targeted path to others antennas. how can you draw such conclusions about everyone in the country who keys a mic. on these frequencys? either you have an extreamly sensitive radio and antenna system or you hunt butterflys with buckshot. it seems that you are a bit narrow minded and might want to scan some more channelsbefore makeing such broad, all-encompassing, blanket statements.
this is what drove me to the out-bands. less noise, bull, and better company.

just a suggestion.
when i was in the great war, (the past 6 months), if i were to make reference to hams who didn't agree with our opinions, i would use the terms, hams and other like minded people. this way it would be broad enough to cover thge non-hams too.

good luck,
jeff

I need to "tune down" my Uniden 2510 to accomodate the 75 watt kicker that it is currently overdriving. I was told that VR-103 is for AM and that VR-108 is for SSB. Is this true? I opened up the rig and couldn't find VR-108. Am I blind?

I was also told to tune the am down to 5 watts and SSB to 10 watt swings. Does that sound right? Any tips would be appreciated.

Doc 4 in Fayettevill NC is the best I have seen to tweak all radios, he is
just off I-95 and sometimes listens to channel 14. If he aint on someone of
the local crowd will tell ya how to get hold of him.

You said buses and coaches use those v. big alternators.

Well, after searching deja etc it came up with yet another American based ng called:

misc.transport.urban-transit

Maybe you can find a bus or coach breakers yard (no pun intended)

and find a couple of those alternators.

I've done my bit, now it's your turn:-)

HR2510:
   Modulation: VR-114
   A.M. Power: VR-103
  S.S.B. Power: VR-104

On A.M., have the radio DEAD-KEY 2-3 watts. With 100% modulation, you
should see a "swing" of about 10-15 watts. Also, adjust the SSB for a P.E.P
of about 12 watts.

I have a Mirage 2950,in very good condition,never been mobile. It comes
with the Mirage Echo mic,orignal box,and manual.It has had a few mods:

1)24-30 Mhz
2)Selectivity improved by adding crystal in IF line
3)AM detector diodes replaced with Schottky barrier diodes
4)Agc improvement mod
5)Replacement of IF amp transistors with higher gain/lower noise transistors
6)8 pole 2nd If crystal filter added in place of 4 pole
7)super swing mod
8)am AF transistor replaced with better transisitor

This radio peforms quite well. No problems with it at all.

     There as a lincensed ham I do have to correct you most NCT's
know that 11 used to a ham band. Why do we know because enough of the
OT's will never let us forget it and somehow blame US for losing it in
the first place. and yes we care and kinda wish the specturm came from
somewhere else because then we would not have listen to or read about
the "good old days" when it was a ham band

A friend gave me an old Raytheon Ray-Tel TWR-2 CB radio this past weekend. It's in decent shape, but doesn't work (the tube filaments light up, but that's it). Since I work for Raytheon, I thought it might be fun to try to restore it to working condition, just for grins. So... does anyone have any information on that model? Owner's manual? Service manual? Sams Photofacts? Anything of interest?

73,
Dean / K5DH

how many people have ever heard the fm relay link of the am station in florida that uses this freq??? i always use it for a beacon to let me know when the band opens in that direction. ive heard before its running 50 watts out but it must be on a huge tower because it hits me strong.

you have obviously never paid any attention then. since your a big ham(or at least have that mentality) then you should know that 11 meters is one of the best bands there are for dx during the high sunspot times like now. listen on 27.555 usb in the mornings and youll hear nothing but europeans sounding like there around the corned or down the road. in the afternoons youll hear some africa and mostly south america until the evening comes and the pacific starts to roll in. its just our luck as freebanders that were smack in the middle of the two best ham bands and the propagation acts accordingly.

Could it be that the 12 year old is only following the eample set by the parent in
picking and choosing what laws the want to keep? No just comparing laws to laws.

Today in the box I found 3 new divisions:

141SD103 St.Pierre et Miquelon
186SD101 Djibouti
283BRC/DX St.Kitts & Nevis

These 3 qsls are now in my web!!!

Does this radio come with the orignal cabinet or is it a cardboard
cutout ?  Or how about this , Does it come with the original speaker ?
Please remember to specify to others what you sell.....

: The info is a bit late for being "newsworthy", and you make it to read
: as if amps are forbidden on 10,....not true.
:
: Butch Magee, KF5DE

This was from last weeks NewsLine, so it is recent.

And it is illegal to manufacture a 10 metre amp. Hams may
modify an existing amp for personal usage however. But
no manufacturer will be able to get one type accepted. Ham
transceivers are allowed to be type accepted in the 10 metre
band for higher power.

Because we Hams are charged by the FCC to do self policing.
We even have our own investigators called Official Observers (OO).

:
: True, CB amps can't be compared to drugs, murder, or even DWI.
: There are a lot more critical problems in the world, and CB is
: very low on the priority list of any enforcement agency (as
: it probably should be).

CB is now a high priority to the FCC. It is called "fixing the broken window" type of enforcement. The theory is that if you let a window stay broken then it will lead to other types of crime as people see that no one cares. The mayor of NYC uses this tactic. He goes after small street crimes like jumping the turnstyle in the subways.

Stop the small crimes and you will no breed bigger criminals.

: But it's SAD to see a "looters mentality" prevail in what was once
: a GREAT hobby. (i.e., during the LA riots, people who looted the
: abandoned stores did no one any "objective harm". The stores
: were insured...the cops looked the other way..."everybody"
: was looting....chances of getting busted were slim, etc.)
:
: What's wrong with breaking laws -- especially when it "harms
: no one"? I can only speak for myself, and personally, I would not
: want to be the kind of person "who only obeys laws when the cops
: are watching". To me, that kind of person is untrustworthy and
: sleazy.
:
: Now some may want to label the above opinion as characteristic
: of an "RF cop mentality", but if you do, you're really missing
: the point.
:
: I don't support anyone going around "turning people in".
: Vigilantism is not the answer, and neither is ham vs cb
: trashing and bashing.

Hams have an obligation to be self policing. No other hobby has that obligation.

: I make no claim to be morally superior, but I sincerely believe
: that a "looters mentality" contributes to a lesser quality of
: life -- for everyone. It can be argued that the politicians are
: responsible for our problems, but I don't buy that. I think we
: are each responsible our actions, how effect others, and
: how our actions ultimately affect the whole of society.

Small crimes breeds people who do bigger crimes.

The mayor of NYC went after small crime like turnstyle jumping
in the subways. Not only did they arrest a number of people on
outstanding warrents and for having illegal weapons, it decreased
crime in general. If we care enough to enforce the small laws then
we care enough to clean up the messes that breed crime. And
small crimes, that hurt no one, breeds criminals.

The "Washington" base went through 2 "phases". The early one, that did
not have the channel 9 switch, was based on the UPD-858 chassis, and was
functionally equivilent to the TRC-457 and 458. The later Washington
(with the channel 9 switch) was the later MB-8719 chassis, and was
functionally equivilent to the "newer" TRC-490 (Which also had a channel
9 switch).

You're absolutely correct, and that was most likely the reason why the
"100mW switch" on the Lafayette radios didn't fly in the eyes of the
FCC. The Comstat 25 also had 25 channels, which disappeared along with
the 100 mW switch, when the "new and improved" 25a hit the market.

I remember when I ran mine in the 100 mW position, coupled to the high
gain antenna, I could talk about 5 miles or more. I could never do that
with a 100 mW walkie talkie.

The Comstat 25 never made the Sams books. You most likely have the 25A
or 25B. Neither of which had the 100 mW switch.

Those were courtesy tones. Since a repeater has a "hang time" before the
carrier drops, the tones are used to signal that one of the transmitting
parties has stopped, and that the timeout counter has reset. Courtesy
tones can also convey information. The pitch of the tone may be
different if it detects the proper PL tone for accessing the repeater.
On large repeater systems with multiple inputs, the tone duration,
amount, or pitch can signal which input the signal came through on.

The "roger beep" itself may not be illegal, PROVIDING, that it's sole
purpose is to be used in weak signal work, to facilitate communications.

The problem is that the rules also state that no noise shall be used
who's sole purpose is to amuse or entertain. Considering that the vast
majority of people, who use roger beeps consistently, are not using them
to facilitate weak signal communications, they are therefore using them
for amusement and that act is illegal.

Look at it this way. A legal CB radio is not illegal. But if you use it
to jam another person's QSO, then you are USING it illegally. The same
applies to roger beeps. The beep isn't illegal, but how it is used, in
the majority of cases, is.

Train wrote:

> And i remember being a child in the 60's playing with all the "exerimental" stuff my grandfather (W2EJT.....sk) had built for the government (amps that took up the whole friggin basement wall) in the 30's-50's. Don't even go to the place where you are going to tell us that HAM's were going for the best antenna setup and not for power. You got to be blowing it out yer ass if you think anyone is buying that crapola.

Hams (especially years ago) had much more respect for the rules, and usually will not break them. There is much more leeway for creativity with antenna setups, than power. Once you reach the legal limit, thats all she wrote, (unless you advocate breaking the rules). Antennas, were much more open to creativity. The guys that managed to put more of their power into the air were the ones with big signals.

There are many hams that pride themseleves in running QRP- less than 10 watts and working the world.

There is no challenge in running power. Any idiot with a fat wallet can run power. The true challenge is to work the weak ones with low power. That is when you know your DX skills are fine tuned. Efficient antennas help out alot here as well.

I do not know many hams that run "big" power. Most run HF with just rig power (100 watts). Some opt for the killowatt, just to get over the noise on 75 meters, but many do not. I know that there are a few "big gun" contesters that I'm sure are more than a little tempted to bump up the power a bit when they're working pileups. But they're in the minority around here. Most people can't afford, or can't justify spending, the money for big amps. In the grand scheme of things 1 KW is only 10 db above 100 watts, and with a more efficient antenna, the difference is less. Also many hams do not run big power because of TVI problems with neighbors. Most hams at least TRY to keep the peace.

1st and foremost, a comprehensive understanding of radio fundamentals, theory, and applications. Without that background, you're basically poking in the dark, and doing things, but not knowing why. There are many books out, that will tell you to "Turn XYZ pot, and peak ABC coil for max power", but don't really explain WHY this happens, or the consequences. You can also fry something, and without good troubleshooting skills, you will not be able to track down and make effective repairs (Which can be embarrasing when you try to explain to someone why their new $300 radio is no longer working when all they wanted was a "peak job").

You also need good test equipment. A GOOD power meter, a scope (For that all-important modulation), and I prefer a spectrum analyzer just to see the dirt that starts coming out due to unstable mods. A set of non-conductive plastic alignment tools for making adjustments. A good regulated bench power supply that is capable of handling the "big" rigs, is also a must have.

I also prefer to have schematic diagrams for the radios that I work on, but this won't be necesary for simple peak jobs.

Unfortunately, in order to keep peak modulation from exceeding 100%, the
average level tends to run much lower than if the limiter were active
and acting like a "speech compressor".

And I've repaired more than enough radios where the operator ran too much mike gain with a power mic, and without the limiter there to take the hit, the audio chip fried. Those audio chips do not like being almost constantly driven into squarewave distortion, and it does shorten their useful life.

Nothing wrong with having an open mind. But preaching and promoting a service which does not significantly improve a radio's performance, adds to adjacent channel interference, has the potential to increase RFI, and can shorten the radio's life is not IMHO a good thing.

>   the more appropriate thing to do.

Removing a limiter allows an excess of 100% modulation. Why is this bad? for one thing, while you may get marginally "louder", your signal has also become broader, and is spreading over adjacent channels, which interferes with other people. Unless you enjoy being self-centered and rude to other people, this should not be a condition to strive for. In addition, people with the limiters removed start to become "rough" or "fuzzy" around the edges when they have it cranked up. The reason again is that the modulation waveform is now starting to look like a square wave. Squarewaves are not conducive to clean audio. If the limiter were allowed to function, and set for 100%, you can raise your mike gain, without fear of becoming distorted. You may hear the cat fart in the next room, but when you talk, it will be clear.

I have done numerous range tests between radios that I have adjusted. One with a limiter set at 100%, and the other with no limiter and the mike gain set to not exceed 100% on MOST peaks. The radio with the limiter is perceived as louder in this setup simply because of the higher average modulation. If the "limiterless" radio was then adjusted to a higher gain setting to match the other radios average modulation, the peak modulation sounded harsher, and the radio would be splattering adjacent channels. There is no significant increase in range either. If I can just make 20 miles with the radio with the limiter, kicking the limiter out makes no appreciable improvement on the received end. A grasser is a grasser, overmodulated or not. This is radio fact, not CB hype.

>

>   be so commonly done.
>

It's common because the great majority of CBers do not understand what they are doing, or don't care, or are just plain oblivious to the wishes of other people, and are easily swayed by fast talking "seemingly" knowlegable techs out for a fast "peak and tweek" buck. When I was young, inexperienced, and "knew-it-all", I used to yank limiters left and right. Afterall, I thought, louder was better. Then I grew up, and learned a little, and actually got to own the proper test equipment. I also learned to appreciate a good, clean sounding signal, and how much easier and more enjoyable it was to listen to than an overloud, obnoixious, distorted one. The plain truth is that a great many CBers cannot be trusted with the responsibility to run a radio with no limiters, since the "more is better" instict always seems to take over and they end up overmodulated. Then when you try to tell them about it, they tell YOU that your radio must be junk, because "big bubba" in east japip, hears them just fine.

> crap to that effect. It bothers you when other techs
> remove limiter transistors, but lying to and short-
> changing your customers when it comes to their radio's
> performance doesn't bother you.

Legality is not the point here. It's about readibility, good manners, and radio longevity. I don't consider it a disservice when I put back the limiters and properly set them up, and then hear comments on just how good the radio now sounds. I've converted alot of people just by letting them experience the difference first hand. You don't realize it until it stares you in the face. How many times do you have to make mr "loud and proud" repeat himself because you didn't catch every word, or certain words that he seems to slur. heck he's loud enough, why can't I understand him? Then you hear him with a properly set up radio, and listen as his words just leap out distinct and clear. So tell me, who's doing the disservice?

Besides, I've made enough money repairing radios that were butchered by the "loud-and-proud" crew. Many, many blown audio chips and final transistors. Funny, the radios seem to last once I set them up properly.

And it bothers me to see people adding to the general noise level that is, what has become of CB radio.

That statement is just flatassed wrong. There is no "type
acceptance" of HF Amateur transceivers.

ATTENTION CB SHOPS!

Hi, My name is Bob Worthington. I am an account rep for LESCO Distributing. We are a wholesale distributor that specializes in CB radios and accessories, as well as other mobile electronics and home electronics. We have four warehouses, one in Dallas, (where I am) one in Granger, Indiana, and two in Florida, Miami and Orange City, giving me the ability to ship from whichever warehouse is best based on product availability and shipping time. We have over 10 million dollars in inventory and have been in business for 15 years. Some of our product lines include Galaxy, Connex, Superstar, Northstar, Cherokee, Cobra, Uniden, Wilson, Solarcon, Hustler, Turner Road King, Astatic, Francis, Firestik, Workman, Bandit, Vanco, Valor, Midland, and Everhardt. We sell wholesale only, so I require a copy of your Tax Certificate and a signed resale form to set up your account. Our prices will surprise you, especially if you have been buying form some of those so-called "distributors" on the net. I have been in the CB business a long time, so I know my stuff. If you want to start buying right, call me. My job is helping you make money. Call 1-800-527-2939, 8:30am to 5:00 pm Mon thru Fri. ask for Bob. Our website is www.lescodistributing.com. We have an on-line price list you can access once you set up an account. Thanks!

thats correct, but thats why we have a system of different charges. after all a kid stealing candy doesnt go to prison even though its just as illegal as somebody dealing drugs. you guys trying to make something big out of it are the same people who want to inprison pot smokers.

I do not see a problem with this. I at one time was one of the one running around with an amp for 11 meters. I think if we as ham operaters pushed amateur radio a little more and let people know they dont have to take the code test then maybe there would not be that big of problem. But on the flip side it is to easy to buy a cheap CB radio and amp verses buying a VHF/UHF radio. I dont think there will ever be a good answer though.

Next time I see you doing 56 MPH in a 55 MPH zone I'll be sure to call the police department and get the authorities involved... why don't we all just mind our own business. (unless of course we need to report a rape or shooting) We should have enough common sense to know the difference between what is serious and what is just pissing *US* off.

Your all kinda right - lightening does take many paths. (usually the shortest, straightest path to ground). Its too powerful to complete a turn in a nice orderly fashion, some current will, but not much. The worst lightening is the positively charged, that's the stuff that starts fires, toasts your equipment, etc. Most of the lightening you see is nothing more than static cling. Its all negative and positively charged ions interacting alot like people do (some you like - some rub you the wrong way). Electric theory is interesting, some argue that electricity travels from + to -. but in a flash light (for example) it travels from - to +. Both are true.

Here in Montana we try to take care of problems BEFORE the authorities get a chance to run them thru a system that is too easy on burglars,rapists,illegals on 10M,pedophiles,etc.Vigilantyism is alive and well.

Carp,

ALL Amateur Radio transmitters, receivers and transceivers that are sold commercially MUST be FCC Type accepted. Surly you've seen pre-release advertisements for new rigs that state "pending FCC Type Acceptance." (I waited six months for my Yaesu Quatra amp "pending FCC type acceptance," I got tired of waiting and bought an ETO amp instead.) That's why there are no external RF amplifiers (linears) sold in the United States that have 12 or 10 meters on them. They can't pass FCC Type acceptance if they do. Most companies will give you the parts or information to make them work on 12 and 10 meters if you prove you have a valid ham license. Every one of my commercially built rigs have an FCC type acceptance plate or sticker on them somewhere. Some are on the back, or bottom of the rig and some are inside but all of them have FCC type acceptance.

It is true that a ham rig doesn't have to be type accepted for a ham to use it but for commercial sale it must be type accepted.

Kevin, WB5RUE

  Hard to respect such a person who endangers his own families welfare
and others by his illegal acts,regardless of what radio service,I would
actually be LESS forgiving if this individual was a licensed amateur and
he may well be........some more of us should follow the gentlemans lead
who is trying to help the authorities.

>I believe the ham magazines (QST, CQ, etc) attempted to stir the pot and get
hams dander up by printing some rabble-rousing articles about "losing 11
meters" back in the 50's, but it never quite caught on as an issue.<

     A similar episode occured in the late 70's when a previously and
ever-since unknown preson named Cooper made a suggestion that part of the
Amateur 220Mhz band be given to a new "Class E" CB.

     The author was ficticious as was the "threat" to 220MHz.  But the FCC
*HAS* recently added new Part 95 service in the 219MHz spectrum.  I am not sure
what the limitations on it's use or licensure will be, but it will not be a
"license free" service like Class D is now.

     Keep your eyes open, folks!

Steve

This one goes under the heading: TYPICAL CB MENTALITY

I heard some people arguing over the use of channel 31. One guy said he had been on the air since 1961 and had been using 31 the whole time. The other guy said the channel was hardly ever in use, so he and his friend were gonna talk for a few minutes. The first guy then proceeded to whistle, make fart noises, and play country music over the first two guys who wanted to use the channel. Even though the other guy did not want to make a call, had no one to talk to and had not been using the channel, he still thought he had the right to "hold the frequency" for his own use, because he and his buddies "always talked on 31."

If you want it to work more than 5 minutes you shouldn'tYou can get a 500 and drive it with a mod V. It works better than a 667. Or you can get a dx1600 and drive it with the mod V

Dunno that I saw anything misleading about Greg's post.. and where I
come from, it's indeed newsworthy..

I forwarded to the C&I Bureau directions to a shop on Hwy. 41 near Terre
Haute that's advertising "CB Amps"... hope they're out of business by
my next trip up north...

eBay really talks out of both sides of their mouth as far as their prohibitions
against "illegal equipment" are concerned.

They do not allow the listing of scanners which have been modified or are ABLE
to be modified for cellular phone reception, even though possession and sales
between individuals of these radios is completely legal. Yet, they allow

linear amplifiers to be listed and sold openly in the "CB" section of their forum. Items which are most certainly illegal for both possession by and sale to unlicensed (CB) operators.

What's wrong with this picture?

in some countires where the AT group and other 11 meter groups have members it is highly illegal to use 27 megs. in iran, iraq and a few other countries it can even lead to the death penalty(they consider it spy activities). most european countries have very active radio police as well. were fortunate here in the usa to have a lazy government.

Does it really matter? After all, on Ch 2 AM, you're only gonna get locals
anyway, and if there's an RFI-down, er.. keydown, it won't affect it unless
it's within a couple miles anyway...

Wouldn't it make more sense to have a "CB Party" - also commonly refered to as
a "net" - on SSB instead of AM?

i doubt they were talking about the cb party effecting the keydown more like the keydown effecting the cb party. if you people really want a schedule to meet other cb'ers check out the Kp net on sunday mornings. theres only gonna be 7 more so hurry.

****

Details

The Net frequency is 27.580 USB, ... (.570 or .590 with QRM).

The Net will run for 9 consecutive Sundays beginning 3 October at 12 Noon GMT, and ending on 28 November.

Purpose

The purpose of a NET is to have fun, study 11 meter propagation, and see who can follow a precise schedule. Are you a REAL Dx Man ??

General Information

The KP NET costs nothing to participate. No QSL's to send, no money to spend at the post office or on QSL cards. It is open to all callers regardless of which group you belong.

Every Sunday, there will be 2 Net locations

One in Europe, and one in the Western Hemisphere (North or South America, or West Indies). Each Net controller will be present on the frequency for 2 hours. The European controller begins at exactly 12:00 GMT, and closes the Net at 14:00 GMT. The controller in North America begins at 16:00 GMT, and closes at 18:00. The locations of the controllers will be posted on this site approximately 5 days in advance of the Net. Click the "Net Controllers" button to see who will control the next Nets.

How To Participate

It's very simple. Be present on the Net frequency at the correct time. When you hear the controller, just call him, and wait until you are confirmed. He will return a progressive number to confirm the contact. This progressive number serves as a contact "confirmation", and is not a progressive number for sending QSL. It is for your records only. Again, there is NO QSL to send. If you don't have conditions directly to the Net controller, then try to "QSP" your call via another station that HAS CONDITIONS. QSP check-ins are permitted. If you have no conditions at all…… Hey… .That's radio.

Scoring

One point for each progressive number you receive. There are a possible 16 points for this Net period. The operator with the most points is the overall winner. The operator who has the most points for their country is the country winner (minimum of 3 points). The operator who has the most points for their continent (or area) is the area winner (minimum of 3 points).

Prizes

You can win 6 Million Dollars by playing the Florida Lottery. We would love to offer a cash prize but unfortunately, Knight Patrol is not as rich as the State of Florida. However, for this Net period, certificates of appreciation will be awarded to the winners, second place and third place participants in the following categories.
Overall winner, Area winner (North America, Europe, Pacific etc), and Country Winner. For more details, click "Current Scores" then "Last Net".

KP Net History

The KP Group was the first Group to organize International Nets on the 11 Meter Band. Our first net was conducted in 1988. In the spring of 1994, there were over 3,000 check-ins made during an 8 week net period, running 4 Nets each Sunday. (Europe, East USA, West USA, and Australia). The most check-ins received in a single Net was 199 recorded by Peter Kp 2o3. Former Net winners include Kp 6o9 Anthony, and Kp 213 Roy in Trinidad and Tobago, Kp 9o4 Marino in Florida, and a big surprise in the last Net (Fall 1997).... 30AT401 Mr. Christian from Spain.

Tips and Tricks

1. Don't miss the first few Nets. If you do, it will be very hard to catch the others. Always try to maintain a perfect score from the beginning. This way, if you Should have one day of bad conditions, you will not be too far behind.

2. Use of the Internet is allowed to locate the net, and contact friends who may have conditions to the controller when you do not. Be reminded that you must make RADIO CONTACT (directly or indirectly) with the controller to be awarded one point for your check-in. QSP check-ins ARE allowed.

Who gets hurt when someone sells an amp for use on the 11 meter band? No one. (Ok, so maybe you set off a car alarm or two as you drive down the road talking with your amp on, oh well! :))

Who gets hurt when a pusher sells crack to a 12 yr old child? You're comparing apples and oranges.

Apparently, the only one who got offended is you, as demonstrated by your colorful choice of language and descriptive prose of homosexual activity. Would care to share with the news group how you became so intimately familiar with the subject? Possibly from one-on-one experience? 8-))

just because there all illegal doesnt make them on the same level. are you more
worried about your kids getting some dope in school or somebody on the street
pushing amps to them(like they would even know what a amp is). what would they
say? "the first amp is on me! see if you like how it makes you feel when you
key up and if you do come get the next one from me" not hardly. you guys trying
to compare amp dealers or makers to other types of criminals is a joke. you
know that wont fly around here.

I wish I could see more law abiding citizens like the ones on this newsgroup.

Just the other day I was walking down the street, about to cross at a crosswalk and I saw the most horrendous thing - a jaywalker! Well, I gave this jaywalker a piece of my mind. He ignored me so I ran to the nearest police station and reported him. After all, this sort of crime can't go unpunished because it is, after all, a crime. I of course have never jaywalked because I am a law abiding citizen. I'm studying real hard so I can get my driver's license too. That way I can drive across the street and I'll never have to use a crosswalk again.

Hi All,

Just thought that I would let you know that I have now updated the ham radio

(and C.B.) clip art site. I have added a couple of more images that I hope
you will be pleased with and have also updated the clip art and midi file
links. I will be adding more soon. :)

True, CB amps can't be compared to drugs, murder, or even DWI.
There are a lot more critical problems in the world, and CB is
very low on the priority list of any enforcement agency (as
it probably should be).

But it's SAD to see a "looters mentality" prevail in what was once
a GREAT hobby. (i.e., during the LA riots, people who looted the
abandoned stores did no one any "objective harm". The stores
were insured...the cops looked the other way..."everybody"
was looting....chances of getting busted were slim, etc.)

What's wrong with breaking laws -- especially when it "harms
no one"? I can only speak for myself, and personally, I would not
want to be the kind of person "who only obeys laws when the cops
are watching". To me, that kind of person is untrustworthy and
sleazy.

Now some may want to label the above opinion as characteristic

of an "RF cop mentality", but if you do, you're really missing
the point.

I don't support anyone going around "turning people in".
Vigilantism is not the answer, and neither is ham vs cb
trashing and bashing.

I make no claim to be morally superior, but I sincerely believe
that a "looters mentality" contributes to a lesser quality of
life -- for everyone. It can be argued that the politicians are
responsible for our problems, but I don't buy that. I think we
are each responsible our actions, how effect others, and
how our actions ultimately affect the whole of society.

Butch, could you point out where you interpreted amateur use of
"amps are forbidden on 10" in the news release? I don't see any
mention of amateurs in the bulletin.

Ah, so the point is--you are permitted to set the standard regarding the degree of misbehavior permitted? If you leave a bar drunk and drive home without killing anyone, it must have been alright.

I hope the drunk is in jail too, along with your 12 year old son's heroin dealer. You're doing it again. If you do something, it is OK; if someone else does something, it is bad.

>Subject: Re: HAM [SOME] ARE MESSING IT UP FOR CBERS!
>Date: Sun, 10 October 1999 04:24 PM EDT

Oh joy...he's gonna mess up ANOTHER USENET NG!

>konstans@geocites.com wrote:

>There as a lincensed ham I do have to correct you most NCT's know that 11 used to a ham band. Why do we know because enough of the OT's will never let us forget it and somehow blame US for losing it in the first place. and yes we care and kinda wish the specturm came from somewhere else because then we would not have listen to or read about the "good old days" when it was a ham band<<

Mark...you try to lie and weasel your way through the Amateur NG's, and that didn't work...so NOW you are going to come here and lie to THESE people too?

Mark does his level best in other Amateur Radio related NG's to do anything to denigiriate ANY other Amatuer that doesn't believe that he should be granted an immediate waiver of all Morse Code tests...And his previous "comments" on the Citizen's Radio Service are just as uncomplimentary.

A run down of Mark's "credentials"

Claims to be a "drafted" officer in the United States Army Reserve, but they won't let him "resign". This is very peculiar since Mark is openly gay/bisexual, and openly solicits sexual encounters for same on the Internet.

He originally tried to tell me (a retired Marine Corps enlisted man) that he was a "lieutenant colonel" to try and get me to stop challenging his posts on RRAP, then when confronted with the fact that DOD doesn't know him, he changed that to "just" a lieutenant, and he is serving under an AKA since he's on the lam from an abusive ex-wife.

Mark also claims that trying to master the 5WPM morse code for the slowest of HF Amateur licenses is "torture", yet he ALSO solicits "DOMME/SUBMISSIVE" encounters, with him being the submissive...guess he LIKES torture?

He COULD get a medical waiver for his alleged dyslexia and other neurological deficits, but he keeps ignoring the pleadings of a dozen others to go to a NEUROLOGIST...Mark for some reason believes his ALLERGIST should give him the waiver, but the good Doc won't do it...wonder why...?!?! (This from a person who purports to have a 246 IQ...guess that doesn't include the ability to take a hint!)

Claimed only a few months ago to have a Bachelor's in Chemical Warfare...NOW states he has a MASTER'S in "History of the Law"

That Mark would insist that the "newcomers" to Amatuer or CB radio know that 11 meters was once an amateur allocation is just another attempt by him to stir an empty pot. He just likes to hear the ladel banging inside the pot!

Sorry Mark! Caught Ya! You lie in the other NG...you lie in here!...WHEN WILL IT STOP?!?!

Steve Robeson

Huh???? Why is it when I look on the back of my IC-756 it has "FCC ID:
AFJ IC-756". How come I had to wait to order one because "it had not
been type accepted yet"???

Thanks for answering my questions. Not wanting to shoot in the dark just
yet, but would someday like to try my hand at radio repair and
alignment. I don't want to stick my hands in anyones radio yet, but
i've got a few radios to practice on.Thanks again for any help provided
Mike

The Uniden Trucker is also known as the PTC-104, the only mod you are going to fine is to use an Expo expander kit A for 118 chanels, it should do 4w swinging 15w with a D-104.

dirk wrote:

> My friend acquired a Uniden Trucker cb, no other model number, just "Trucker". It is an am only radio, and its most distinctive feature is that it has 2 meters on the face, one for TX/RX strength and one for SWR measurements and mod percent (accurate? Who knows?). Anyway, does anybody know where I can get more info about this radio (is it a precursor to a recent model? When were they made? etc.) Any info would be great.

Kevin,

If you come up with another one, or a Sonar Model "G", PLEASE let me know! I am vaeryanxious to add one of each to my station collection!

Anyone else with one, please keep me in mind, too.

73

Steve Robeson, K4YZ

I'll repeat what I said to the other mistaken fella. There is NO FCC requirement for Type Acceptance of any commercially sold Amateur Radio equipment. Period. Not even for amplifiers. (That'll raise some eyebrows!)

Here's the deal --

External RF Amplifiers -- These must be *certified* (key word = certified) in accordance with Part 97 (97.315 and 97.317). This was largely written to shut down mfrs of 11-meter capable amps. It is NOT type acceptance.

Everything else -- most other amateur rigs get caught up in other non-Part-97 *certification* requirements related to Part 15 emissions due to internal processors, non-reception of cellular phone frequencies, etc., etc. A lot of other equipment is subject to similar certification -- your PC, your radio/alarm-clock, your walkman, and your wifes microwave oven. Again, none of these have anything to do with type acceptance.

Type acceptance is a wholenudder animal, and no amateur radio equipment is subject to type acceptance.

CB equipment is subject to type acceptance (in addition to Part 15 certification).
GMRS equipment is subject to type acceptance (in addition to Part 15 certification).
FRS equipment is subject to type acceptance (in addition to Part 15 certification).

Amateur radio is NOT subject to type acceptance.

First off, let me state that the challenge was made to cbradeeo@aol.com. Not you. Unless you and he are one of the same and change handles around consistently, if the case proves the latter, I understand your attempts at camaflouge. However, in part, to assist you in your quest of the Holy Grail, let me factfully state that it is easier to name the countries I don't posess. In respect that you may be a ham who has no problem with my freebanding(You don't bother me, I don't bother you, I'm ok, you're ok, we're all ok) you may ascertain from this posting that I am not implying in any way that I get out better or am better than said ham in question. Once again however, the idiot that juxtaposed his nonsense at post, if you are he/she, I have you buried. And if you really believe what was posted by this Rambo-type, we have nothing more to discuss. If you are a true gentleman/woman, my box is always open for intelligent dialogue pertaining to my DX conquests.

1 the bands are not yours. it is allocated to you by the itu. they giveth and they taketh away.

2 you are nobody. you have no powers and no rights to clean up anything except whats yours. and nothing is yours except the equipment you use, not the freqs you use it on.

3 i bet you would love to give all those truckers using amps a wipping. sounds like thats right up your alley.

No. The real problem is that we have raised an entire generation who has no respect for the law. The "It's okay as long as I don't get caught" mentality prevails. Just another example how we're sinking ever lower as a society.

Yeah. Isn't that nice? A licensed ham cannot purchase a high-quality AMATEUR
amplifier for use on 10 meters. Why? "Because CB'ers might use them." Yet he
can go to any truck stop and select from a full line of Texas Star, Palomar,
etc., CB amps which work nicely on 10 meters.

What a joke!

Are you sure this was CB? Sounds to me like 3950Khz during the Liberty Net.

I don't see the use in this post. If CB radio is open for use for whatever, the two guys could one... "pump their shit up" with use of GOD's gift to CB (amps), two... move to a different channel, or three... 10-21. Less confrontation, less hassles.

There will always be a local radio BOSS (more like self-proclaimed). CB or not. American ego you might say whereever you go. Same in Hawaii, same in California and same in Florida. These are the places I've been in the past year and a half and thats what goes on. I've listened on 2 meter and 440mhz around my end and the same goes on up there too. Its inevitable I guess.

My 2 pennies...

>First off, let me state that the challenge was made to cbradeeo@aol.com. Not you. Unless you and he are one of the same and change handles around consistently, if the case proves the latter, I understand your attempts at camaflouge. However, in part, to assist you in your quest of the Holy Grail, let me factfully state that it is easier to name the countries I don't posess. In respect that you may be a ham who has no problem with my freebanding(You don't bother me, I don't bother you, I'm ok, you're ok, we're all ok) you may ascertain from this posting that I am not implying in any way that I get out better or am better than said ham in question. Once again however, the idiot that juxtaposed his nonsense at post, if you are he/she, I have you buried. And if you really believe what was posted by this Rambo-type, we have nothing more to discuss. If you are a true gentleman/woman, my box is always open for intelligent dialogue pertaining to my DX conquests.

dx conquest???

do you climb some high mountain to talk on your radio? if not then theres no conquest involved, no matter where you talk too.

your challenge to cbradeoo is a joke. he's a retard and you know it. a person is only as good as the oponet he picks in things like this.

FYI i am not cbradeeo. my only names i post under are timbonebo@aol.com, twoir082@aol.com, and ZeroEightyTwo@aol.com. dont confuse me with anybody else, especially cbradeeo.

holy grail??? didnt you read where i said i dont even qsl anymore??? thats a old part of the hobby for me and is usually a fascination of the newbies.

i am not a ham and never will be. all 112 of my confirmed countires(not counting any from qsl managers) were made right on 11 meters.

whos an idiot? your the one making a mouth full of assumptions.

Typical Rule worship attitude. I bet he doesn't even see anything wrong
with his boss (big brother) poking his nose into his private affairs. It's
a good thing our Founding Fathers are dead because they would be giving us a
sound thrashing for destroying the country they created with their own blood
sweat and tears....

If the audio limiter circuit has been disengaged, there would be no use for
a power mic on the GrantXL/Cobra 148GTL.  Tech's should either find out the
mic application the operator will use and modify the radio to its applicable
use or advise the operator to not use a power mic for use with a wide open
rig.  I've seen guys walk into a CB shop, have the tech modify the radio
because he wants to be LOUD, and walk out the door.  No questions asked.  I
would ask the tech first on what should I use and then go from there.
But... thats just me.

A lot of Americans just don't realize how BAD it can get in other countries. They look at the minor gun and drug problems we have and say, 'this is bad, this is hell.' They would blow their resistors if they saw what went on in the rest of the world's sewers. We must be doing something right some of the time because our problems are minor compared to most of the rest of the world. US agents operating within our borders rarely come to a house (or a village) and kill everyone inside and leave like a thief in the night.

Jim

Yep. That'd be them. The selector actually had a red letter "A" and "B" after channel 23 to signify the channels. Lafayette's earliest HB-525 mobile rig also had the "A" and "B" switch.

Normally no. The limiter will keep the audio at a "safe" level. Bill reports that he's seen a few radios where the limiter transistor has actually been damaged by excessive mike level. I've never seen that, but I suppose that it can happen.

If you keep the power mic set to a level that just gives you the modulation that works, and don't go above it, you should be fine.

Galaxy DX77 AM/FM/SSB 10/11M "export" mobile, factory echo, beep and so on, working 100%. cosmetics 80% (has ext. spkr mounted to bottom cover from being used in an overhead mount and some normal scuffs on the sides, all lettering, etc., good.) Stock mike, sorry no book. $160

Cobra 29LTD Classic (older unit, no new junk), new HD final, audio and power peaked, sounds clean with stock mike. Cosmetics OK, shows some wear from use, some lettering wear on the volume/squelch area, really nice running radio for only $55

Sears Road Talker 40 mobile, AM only, BIG mobile would make great base rig or bench radio, looks good, works, hears and sounds great, can be modified for channels but is stock now, $35

D104, amplified, black base and head, grip and push to talk bars, not wired. $40

Turner Super Sidekick, base mike, shows wear. $25.

buyer pays shipping/ins. ppd. MO only, sorry no COD's, email replies please.

About what I did to this group. Toll Free & others are right about me & I WAS 100000 WRONG! See I am half German (on my fathers side) & therefor stick to rules more then most. I am truly sorry & ask for everyone's forgiveness. I was going to put a I AM SORRY WEB SITE to all, but deiced to do it personally to all on here, I am back on here if you all want me too & I will leave if you want me too. I am sorry but I am not going to cuss!

You self rightous amateur's make me laugh.Not only do you cross post to stir
the pot but you don't have a clue.Like i have said before, if you want a nice
big output amp for cb just call any ham store or manufacture you don't need a
ticket.Go to the ham site www.qrz.com and its ready to rock and roll on all
bands.All thanxs to are ham friends.And if you want to convert any ham radio
that can be found there too.Take care and have fun.

if its modded well they wont try to squeze every last watt out. the chipswitch
is great for dx'ers and sidebanders but not if you just talk am on the same
channel everyday. they do 8 watts am and 25 watts sideband all day without
getting warm or stressing anything. 73 tim 2-IR-082 http://irdx.org

Enough of the "I do it better than you" bullshit. Different people take different roads and all meet in the same place. After 20 years of working on them, I've seen things people have paid to have done to a radio that served NO use what so ever and I've seen mods done where I just sat back and went......DAMN ! ! ! What this who thread will come down to is that there are as many ways to tune a radio as there are people doing it! Set the radio for the installation and what the user requests........You're not being paid for your beliefs or opinions unless asked. If you won't do the work the customer wants and do it the way he or she wants it done, then send said customer to a shop that will do it the way he would want it done in the first place rather than generating ill will toward you or the other tech. In areas where there is competition for service work I see all these users AND techs badmouthing each and the final result is they (the customers) will travel a little further down the road to yet a different shop and not have to deal with all the in-fighting between shops.

I have been listening to 2 meters since 1974, and I have never, ever,
EVER, not even once, heard anyone playing music on any frequency in
the band. My reception area covers the better part of six counties in
upstate New York.

Too bad ignorance isn't painful. Your feeble attempt at any intellect on your behalf was formidably and immediately nullified by your self professed lack of knowledge on a subject that you haven't the slightest clue. I don't splatter the spectrum with a gazillion watts and I communicate globally(that means worldwide, genius) on practically a daily basis. Directionals? I hav 60 bucks in a Maco 5/8 wave, another 200 in my "illegal-as-shit" Galaxy and rarely go above 12 whiskey out on the side of the freeband. This is a challenge to you. I will wager I have many more VERIFIABLE(I.E.QSO cards) worldwide DX contacts than you. I have 48 countries this year alone and conditions hold sometimes over an hour. Yes, I have the smoke entering my 220 line, but seldomly use it, usually only to take out the ignorant rambos like yourself. Once you make a post that is maliciously aimed at different views than your own and full of erroneous information, it is more than obvious to all but the most sheltered of individuals that you have self-purportedly destroyed any credibility that you may or may not possess. Therefore, any postings you may attempt in the future will be accepted as pure hyperbole on the part of an individual that is obviously obscured to his lack of knowledge of said subject that he attempts to profess so eloquently but fails miserably at any rationale level of dialogue. Thanks for informing all of us low-level education cbers that you have absoluely no credibility in whatever propaganda or innuendo that you attempt to espouse.

The shop I work at refuses to work on any illegal equipment, because of the fines
and charges that could result from the working on such equipment. I don't know of
a
requirement to turn anyone in, but would not be surprised with all the new
regulation if there was one. Since we don't work on that type of equipment it
would
not effect us.  As far as verifying an address that is no problem, that we do
everyday. If it is credit card or check the bank can do it. Ever heard of a
drivers
license?

i'll make that wager. i havent qsl'ed in years but i have 112 countries
confirmed direct with post marks as proof. how many do you have total? we wont
count any cards from qsl managers because there not provable but if we were my
total would be even higher. let me know. 73 tim 2-IR-082

I would like to correct you. The band was never taken away from hams. It was turned into a band that had to be shared with non hams. Hams could and still can use 11 meters, as many do. They are just limited to 4 watts if they want to go by the regulations, as some do.

Most of the ones that yell the loudest you will fine were once CBers only and then got the ham ticket. Besides most of the ones that can remember 11 meters as a ham only band will soon be gone.

I believe the ham magazines (QST, CQ, etc) attempted to stir the pot and get hams dander up by printing some rabble-rousing articles about "losing 11 meters" back in the 50's, but it never quite caught on as an issue.

"We can't control you, but you must be controlled if you are
to exist; therefore, control yourselves, or cease to exist."

Having been licensed since 1961 I dare say I could count on both hands,
and have fingers left over, the number of times I have heard other OT
(or any other) hams mention the 11 meter band once being a ham band, or
caring that amateur radio lost it. And I still say most new hams do not
know it was once a ham band.

<<A long time ago (1965) when my Lafayette Comstat 25 was made, there was a
switch on the back that dropped power from 5 watts, to 100 mW>>

I can verify that. My Lafayette HB-200 (1964) came with
a 5W-100mW switch that was advertised with the advice
to "Use the full 5W input with your FCC CB license...or
switch to 100 mW and enjoy Part 15 license-free hobby
comunications"!

Actually it is the deltatune that is removed on this radio. On the ne nw 25
it is the rf gain that is removed.

Can some one explain the DSC on the Uniden (68ltw, 76ltw, etc). Is this a
preset squelch or does it use some intelligence?

FCC to step up 10 meter enforcement

The FCC's Legal Adviser for Enforcement Riley Hollingsworth says hams can expect more rigorous enforcement on 10 meter issues next year. Hollingsworth told visitors to the Shelby Hamfest in North Carolina that the next area of enforcement would be the encroachment of unlicensed individuals into the 10 meter band and a crackdown on illegal RF amplifiers. His announcement drew loud applause from the Shelby crowd. Hollingsworth elaborated on the comments in a recent interview ARRL Audio News concerning this and other enforcement issues.

"There are really two areas we need to really crank up on next year. One is the incursion into 10 meters by unlicensed operators, CBers and so forth. And also the sales of illegal equipment on the Internet and at hamfests and so forth. We really need to crank up enforcement in those two areas."

Hollingsworth told the crowd that he'd spotted more illegal equipment at Shelby that he'd seen last May at the Dayton Hamvention. You may remember that at the Hamvention, FCC Field Office personnel from Detroit warned several vendors about potential violations relating to the advertising or merchandising of RF amplifiers capable of 11 meter CB radio operation.

I have this radio and wonder if anyone would like to buy it. It is
complete and in good working order. Shows its age but doesn't look bad
at all. Needs a good cleaning. Make me an offer shipped to your door
CONUS. This is a 23 channel AM base radio. Thanks for the read. Jon.

I have been a HAM and a CBer for several years and I enjoy radios in general, I would have to agree that HAM gear is cleaner thats whay I use a Yaesu FT-757 GX-II most of the time along with my Browning, but I have found that skip on the CB is crouded, and DX on the HAM bands is boring, I find triple nickels to be a good compromise.

actually 26.815 is the alternate station for the big boys on the bowl. this is
where most go to local talk when the conditions are strong (not that many are
into local talking). its always interesting to hear guys talk down the road
with 10 or more kw's.

I have heard of that one and the one about the police being able to arest you/take away your equipment if you illeagle, but no one cares or folows them.

The illegal usage will continue.
I do not reasonabilly believe that that there is an end in sight.
Amateur operators do have self policing...yet have no legislative powers
over others.
The only thing that may be of benifit to curtail illegal use...is when
they (the illegal) becomes tired of their toys.
I do remember the days when the most powerful station was the one who
had invested in a good antenna setup.

And i remember being a child in the 60's playing with all the "exerimental"
stuff my grandfather (W2EJT.....sk) had built for the government (amps that
took up the whole friggin basement wall) in the 30's-50's. Don't even go to
the place where you are going to tell us that HAM's were going for the best
antenna setup and not for power. You got to be blowing it out yer ass if you
think anyone is buying that crapola.

William Walcher <KE4SZG@webtv.net> wrote in message

The info is a bit late for being "newsworthy", and you make it to read
as if amps are forbidden on 10,....not true.

I don't think it would hurt business that much. In fact our shop has a 4
week back log just doing legal work, as do most real radio shops. I'm not
talking about the shops that that have warranties on the work they do that
aren't enforceable. There is more than enough work for real technicians
that.

This FS-23 was given to me and I have no use for it at all. It is 100%

complete and in decent shape except for a hole drilled in the side for a toggle switch that was hooked to nothing. Very dusty on the inside - been sitting in a basement for 20 years. It does not work, tubes light and sound out of the speaker but no signals with an antenna hooked up. It also hums with the vol down so I assume a cap(s) is dried out. I didnt even try to transmit or figure out whats wrong...   Whoever wants it figure like 8-15.00 to ship it or you are more then welcome to pick it up in the Chicago area. Save this fine old piece of CB history from the dumpster. photos at:

http://www.interlync.com/gold1/sonar.html

73,
Kevin

There is a keydown this weekend, do it on the higher channels. I say this because you always have these parties on a different channel every time, most keydowns are held on the lower channels.

There is one on ebay for $32.50. Ebay sells stuff for more money
than you can get on the newsgroup. I have one. They don't seem

```
to be rare because I see so many for sale. Good luck on the
footwarmer.

Guess you could say the same thing about anyone selling illegal stuff. Drug dealers
only sell to junkies so whats the big deal?

There's a BIG difference. Drug dealers tend to kill people.
No one is likely to die from an illegal CB amp.

I might be talking out of my hat here but...I seem to recall that amp used about +90 (or more) volts on the screens. If your screen grids are not grounded then I suspect they did use a hi + voltage on

them and that's what is missing. You find where that voltage went
and the amp will probably work.

Since it's been many years since I've even seen one of those I very
well could be wrong. Good luck and I welcome anyone to refresh my
memory of this amp if I am wrong.
BobC

I hate to add to this hail of fire , but I have read so of your comments and
your a stupid cunt. I guess that is all that is needed . Thanks for shopping at
Walmart.
O by the way you disrespecting the ladies be it shadow or others will not be
tolorated by a dick sucking queen like you. I tell ya its like this If you
called my
girl a bitch id beat your fucking ass from hear to the next goddam parish. Far
as women doing oral well goddam who gives a shit. I mean are you one of those
types that is jealous that toll free is getting a blow job from time to time
and
you secrety want TOll Free all to yourself. I have sat for o about 3 hours or
so reading this stuff catching up to the new asshole and have not seen
professor say one dam thing so I guess you take the cake.Hell maybe you are
professor.
I would not doubt it.

Tru dat ..Me growing up around New Orleans and going to a school where there was only 14 whitepeople I dont really see color as a basis for anything , but out of respect of my breathren of either side of the invisable line that I have been granted to cross either way, you say terms litely.Though everybody is my nigga. Though my meaning has no race applied nor do blacks .Its some blacks use it to have a reason to fight . Its some whites who use it as a term to attack some people in the black culture. In all reality I am a true motherfucking G and I keep rolling , Then again I can talk ellegant and not that way. In life there is a place for everything. Infact As every culture knows there is a boundary we all know its there and yes there are racists from all sides .I dont condone racist

actions on either side. Usually a person is racist beocuse of a few things . 1 the surroundings
he lived in , Being his/her mother or father having something done to them and telling them that other cultures are bad or they had something done to them like being beatup or there mother raped buy a certain culrute so they hold it against the whole culture. In life there are NIggers of all cultures be it white , black , hispanic etc .
Though its all ok I guess. I mean people will be people .Anyway though I would add onto Tolls message there. Maybe the candy asses of all cultures would just not gie a dam. By the way TOLL man I have quickbooks 2000 but the dam thing is messed up.Its seems to not have the right serial number. Ack thats Intuit for you..
Dumbasses.:P~~ wink

Not to pounce on you just to throw in a little humar about what my culture has done.
MY culture me being white well mostly I am part Indian , It has over the time called black people people of color .When if you punch the hell of out a white man heis all black and blue.YOu punch a black guy ant shit happening.So hell I squeeze

on your neck and you turn red.YOu squeeze on a black persons face and he is
still black .So who is the real people of color.Just thought Id throw that in
to make people think.:P

Shut the fuck up and go to HotSprings.Then your x ass will shut up and 10-7 will
too.I like 10-7 and I know very little about you only that you partly stole " daves design " if there is even a design.How someone can build amps and even make money is kinda funnny.I mean doing it for a living hell I dont know.I am just a
Cisco man. Networking is a key to reality .Various points meet many.

A friend I got hold of a President McKinley SSB CB set and it's a mess.

I have two questions...
```

I want to undo the clarified mod to get the thing aligned and working. It's just too sensitive to use the way it is. I don't have schematics or service manual. I know about the resistor and diode, and I'll put them back. I want to get the thing working first, THEN go in and 'unlock' the clarifier by changing to a regulated feed, not try to make it slide 6Kz.

My friend ordered the book from Thomas Publishing, volume 2, as that was the only reference found. But it's useless. It turns out that AFTER getting the book, you find out that the tuneup for the McKinley is listed as being in Volume 1, and variable adjustments are in volume 4. It had info on how to hack the PLL with two toggle switches and on how to convert the clarifier (with no examples or descriptions on the stock condition). Totally useless for what we needed.

Question #1:
So, where does the clarifier originally hook too? Whoever did the mod did clean work unhooking it, and without ever seeing another stock unit, I have no idea where the wires go.

And I want to do a general alignment. It's so far off frequency it's ridiculous.

Question #2:
Does anyone have the alignment order and test points for the PLL?

And if anyone could scan and email me a section of the schematic with the PLL it would be GREATLY appreaciated!!

Mike

I have an SSB CB set that is exhibiting the 'buzzing relay' problem.

I was about to tear into it, but just this morning was told it's a known
common problem in SSB radios with the Uniden uPD858 chassis.

Anyone shed some light on this?

> Could you experts out there Please tell me:
>
> 1) Where is TR24?

Put radio on table with speaker side facing up, control nobs facing you.
Remove the cover and looking down at the radio, both R-131 and TR-24 are
in the lower right corner section of the radio. A magnifying glass
really help see those numbers.

> 2) Would simply removing it make the radio perform better?

It does make the audio louder, and with the AM carrier set right it will
"swing" better, but there is the trade off with poorer sounding audio on
sideband.

> 3) Would removing R131 and using an Astatic 636L make for a good
sounding
> radio?
This would be the best choice. Removing R-131 will give you the "swing"
you looking for and will not effect the SSB audio. I have a Cobra 148-f
with an Astatic "Road Devel" mic. I have the AM carrier (VR-10) all the
way down and have R-131 removed. Gives me about a 2 watt "dead key" and
peaks around 15 watts with a whistle or 10 - 12 watt with normal talk.
With the boot on low, I see peaks between 30 and 50 watts. I keep the
Dynamike on the radio at about the "11 oclock" position and the mic
about a quarter way up fron the "off" position.

```

The talk back is usually done in one of two places in the radio, most likely it was done on the solder side of the board back by the pa jack, it will be a resistor soldered on to the board between the center conductor and board ground at the pa jack, it should be noticeable, try taking it loose and see if your talkback goes away, if so just add a switch where you have removed one side of the resistor, to the resistor and heat shrink it and go to board ground somewhere. or ground it where it was already grounded.
As far as mod kit or swing kit you can do this yourself fairly simple. In the back left hand side of the radio by the small aluminum heat sink where the final power transistor is located you will find a jumper labeled (JP36) remove this and in its place put a 220 microfarad electrolytic capacitor one leg in each hole where the jumper was, now take a resistor (75 to 150 ohm) and place it across the back side of the board to each of the legs of the capacitor you have added, a little solder and make sure it is not going to touch the case of the radio and your in business, changing resistor value will change where your deadkey will be set, also this resistor needs to be a

minimum of a 1/2 watt.

Good luck

Dat 10 ohm smoke,
Sure make you choke,
Da more dat smoke,
Da more ya broke,
Damn dat 10 ohm smoke!!!!

<2275-38028C94-40@newsd-612.iap.bryant.webtv.net>...

I have a cobra 29 LTD that I want to put a mod kit in. It's been tuned and peaked, it's also had talkback added. I would like to put a switch on the talkback, but I don't know how. I have herd that a mod kit is not always a good thing. Is this true? How hard is it to install a mod kit and add a switch to the talkback? Should it be left to a professional? I would like to do it my self for experience, but not if I might mess up my radio Thanks for taking the time to read my post.
Please respond.   Mike

Well I don't know where you live but out here in CA PA are not alowed nad you
can get a ticket for disturbing the piece, or something like that, so I just
don't use it around the cops, and it works just fine.

Haaaaa. Twenty meters has always been the most useful band. Twenty
meters and down. Even during the bottom of the solar cycle, 20 and down
work very well. Seventeen meters and up are much more subject to solar
activity and MUF. There are many times that 20 is useful and 15 isn't.
Twelve meters becomes iffy most of the time, and 10 meters even more so.
I can look at my log book and see how MANY contacts I made between 1988
and 1993, and how FEW were made from 93 to 98. No, eleven meters was
never of much use at all for any dx--at least for the amateur community.

This is exactly right. Somebody else mentioned FCC conformance, or certification. That is also correct. Some local, county, and state agencies require electrical equipment to have UL and FCC certication (where applicable) if it to be sold new through retail outlets. Manufacturers are anxious for their products to conform to these regulations. One issue involved in certification now seems to be whether the equipment is easily modifyable to receive 800 MHz cellullar or not. Amplifiers must not be easily modifyable to operate on the 11 meter band.

Hi,

If you want, you can use the Wilson Trunk Lip Mount and order the 36"
Short Load Antenna (SLA) in place of the 62" whip that comes with it.
We sell this combination quite a bit. The SLA can also be used with the
Wilson Mag Mounts as well. In other words the SLA can be used in place
of any 62" wilson antenna.

> It was the Hams prime hf dx band!<

Jack, I don't know where you are getting your info, but that's just not true.

Until then, the HF allocations were 80, 40, 20, 15, 11 and 10 meters.

20 meters was and still is the most productive HF band for most reliable communications. 15 can be just as good when the sunspots are fairly stable, but it's subject to rapid fading.

17 meters is now experiencing great popularity since it's got basically the same propagation as 20 meters, but isn't nearly as populated.

40 is a good night time band if you can either squeeze in between the SWBC stations on phone or use CW on the bottom. 30 meters, like 17 for SSB, is getting more use for CW DX as it is not nearly as crowded as 40. Also, the mandatory lower power for all classes (max 250 watts) keeps the QRM low.

There's no question that 11 could be used for DX...it's just that there wasn't as nearly as many stations on it, foreign OR domestic. And 10 meters is a great band when it's open.

But by NO stretch of the imagination was 11 meters EVER a "prime" HF allocation for Amateur Radio.

Can anyone help me with troubleshooting reciever problems with FRS 101s? We have about 20 of these radios that are a couple years old and about 5 of them have lost their recieve even though they transmit well. Is this a common problem?

What is the plug-in board for? Are there diagrams and/or troubleshooting guides available?

Any info would help.

I have heard that there is a diagram of how to do this floating around out there somewhere, but the only one that I have see is just to change the tone of the beep.

Can someone help point me in the right direction.

Thanks

Dean

No,
but the rooftop antenna installation is what first attracts anyones attention.

I get griped at by the neighbors for creating interference, the local
neighborhood association has been trying to force me into removing
the installation entirely (I was here before they were). and it seems as
though
everytime there is a problem that is radiop related, I also get that knock on
the door
asking what I am doing? etc.

There are 2 hams that live close by and theres a 25 KW am transmitter located
in
a field just east of my location (910 KFYI).

So, I don't see why I have to put up with all the bitching. I meet all FCC
requirements
here (even had the fcc come in and do an inspection to determine where the
problem was).

This is why I get any attention at all from the neighborhood, I have a very
visible setup.

He doesnt have to make his radio equipement available unless he is a licensed ham, interfering on ham freq is the key here. When people are on the radio they are creating far less havoc than if they were on the street. yes, they yell scream cuss, fight, whistle, deadkeys, play music. but this is a release of sorts for some a way to blow off some steam you might say, i know the asshle are gonna say yeah but its illegal, and so is jerking off in the closet but ya know what you still do it. The other cheek needs to be turned on occasion for the far greater effect that can happen by busting all these cbers and manufacturers, do you not think a lot of money is passed around because of the stupid cb band better think again. Peoples mortgages are being paid there property taxes are being paid and money is being circulated around from all this, call mcm,westgate, rf parts , mouser, ask them how they would like there gross profits cut because joe tune up artist is no longer in business and doesnt buy anything from them any longer. as far as CBers Keep em off the ham bands and let them play on 11 meters its like being put in a big cage and have at each other, at least you know where everyone is.

Forfeiture. Now that's a great idea. That's like giving government enforcement officials (police, DEA,
SBI, FBI, FCC, etc.) a blank check. Since forfeiture falls under civil law it's not "not guilty until proven
innocent" but "preponderance of the evidence". Many people have had items (cars, houses, money)
seized by the government who were NOT guilty yet could not afford the civil trial to get it back.
Unless you have been in a cave for the last 10 years you couldn't help but hear the many horror stories
told by honest innocent working folks who got tagged beacuse they had too much cash or a kid who sold
a narc a joint. The bad guys can afford to lose stuff to forfeiture.

I have heard Texas drug enforcement officials "shopping" for vehicles to stop. No lie. I heard and watched
them stop and detain 2 Hispanic young men who just "fit the profile" (not many Hispanic folk in Texas...hi. hi.).
They had $600 in cash and a new truck. The undercover officers had followed them from Austin and had the
local police dept. stop them and call the dogs out.

The officers then spent the next hour talking on their radios about how their boss would like a new truck, and
how the cash would make a nice addition to their training ("entertainment") fund. Well the 2 men had the
money by legit means (receipt from selling some tires and rims)), they were searched (twice) and basically
hassled just to "maybe turn something up" (direct quote). After they let the

men go I continued to listen
to the officers while they headed back to Austin, "shopping" for a new SUV.
They actually pulled into a
gas station and scoped out one guy who they were sure "fit the profile" (was ethnic and had a nice ride)
but they decided not to hassle him after he turned out to be a local deputy.
I really wish they had called the
locals on him.

BTW, The Chief of police in this Texas town drove a nice caddy thanks to a hapless pot smuggler who
stopped in the wrong rest stop. Having that nice car available for the Chief was definitely a crime deterrent.
Wonder what he drives now...

Forfeiture. BAD IDEA. Unless you live in a police state...

CUL,
-barryc

Upon posting my message about looking for the conversion for a roger
```

beep, I got this message below.

****
if you really want this then the only direction i can say is to direct a

gun at
your head and use it. its crap like that messing up the band not amps.

From Super Side Bander
****

I, like a lot of technicians/shop owners out there provide a service for a lot of people. There are always things that we do that we don't agree with or would not do to our own radio equipment, but when someone asks you to do this or that you provide them with this service.

Whether it be toy installs, super mods, echo's, there is always someone that is not going to approve of it.

My point is this however, why would someone take the time to complain to me if they were not so narrow minded, if they were to fall face first on a needle, it would put out both of their eyes.

Happy CB'ing Ya'll From Texas!

Bt The Way, I still need the diagram to convert the roger beep to a fart in the DX Radios. Please email me if you can help.

Thanks

Charger

Looking for someone who has a ts430 with out of band transmit
mod? I've received info from many folks but would like to
hear from someone who owns one. Yeah I know its not hampropriate
for this mod on this radio, so please keep your "legal" comments
to yourself. It would seem that there are 2 very different mods
listed to enable this radio out of band transmit and I want to
hear from someone who actually owns one or has done the mod on
the 430 specifically. I would like to thank all those who offered
me their info on this, and if I have no luck finding someone out
there with this radio or hands on for the 430 I'll probably flip
a coin on the mods I've been given.

Thanks in advance.

Jeff

Beg your pardon, when you use a cb, even though you are not licensed,
you are still bound by FCC regulations and you must make your equipment
available for inspection.

October 13, 1999: Today marks a new era of enforcement of FCC regulations. The Compliance and Information Bureau (CIB) formally received its funding and its Congressional mandate to ENFORCE the law. A new arm of the FCC, called simply, The Bureau is retasking many of its field engineers even as I write this. Their new job will be to monitor compliance and enforce FCC regulations in all services including the Citizens Radio Service (CB Radio). It seems the years of ABUSE by some would be "high power" CB operators, and so called "Freebanders" using non type accepted equipment, has finally goaded Congress into action. The new bill regarding local police control of CB radio is expected to pass in the House this year. With local police control and real money being funneled into CB enforcement; we will soon be hearing a quieter and more polite CB band. "Freebanding" will be a thing of the past in this country, as will noisemakers, dirty linear amplifiers, foul language, idiot beeps, and lots of the stupidity we hear every day (much of it right here on this NG). All illegal ops should take heed. Change your ways now, or pay later! For the other 75%, the thoughtful and legal ops; Keep Up the Good Work!

The traditional view has always been that a ham is someone who holds an

amateur radio operators license. I have never heard of an swl'er being
referred to as a ham. And that is not ment to put the swl'er down in any
way.

A little while ago, I posted a request for info on the McKinley.
Specifically, schematic or PLL allignment instructions.

I've since found that there a number of radios that might share
the same chassis, since the mod information I've been able to
find on the internet all list the same part numbers and references.

So, with that in mind, I'll make the request again, but also list
any of the units that will give me a clue to what I need.

They are:

    Uniden (President) Washington
    President McKinley
    President P400
    Cobra 140GTL
    Cobra 142GTL

Again, what I would like is a schematic 'section' that shows the PLL.

What I need at least is an alignment procedure for the PLL.

And if someone can tell me what the original clarifier hookup was.

Mike

I am probably the most pro-enforcement individual you will find in this newsgroup or elsewhere. But I am strongly opposed to these proposals which will give enforcement powers to local law enforcement agencies.

Most police officers and sheriff's deputies do not possess the necessary level of knowledge to enforce laws pertaining to personal communications. How many cops on the beat, for example, can tell the difference between a CB and a UHF commercial transceiver? When a neighbor complains of interference on her TV from "that CBer over there with the antenna", how is Officer Friendly supposed to know the difference between an A-99 and a 2 meter vertical? Or, what if that same A-99 is being used on 10 meters by a licensed ham? When a routine traffic stop reveals an RCI-2950 and a Texas Star amplifier, how is the cop supposed to know if it's illegal CB gear or being used legitimately on 10?

Do you see how this could conceivably cause more problems than it solves? To those of you who say "if you're a ham, they have no authority over you and you have nothing to worry about", consider this: you're usually guilty until proven innocent when it comes to matters such as this. If you are operating legally and the police confiscate your radio equipment, it is YOU who incurs the hassle and expense of going to court in order to reclaim your property.

Hams who think this is a great idea to eradicate illegal CBers better think again. Do we really want to let this genie out of the bottle?

>What comments are those. can recall making coments whereby I accept for the purposes of disccus an unflatering remark about CB and go on for there, I guess the idea of an IF.. Then .. statement is beyond your mental horizion<

Unflattering remark? YOUR assertion was it was akin to a birth defect, Mark. I'd say that was a bit beyond "unflattering".

>Indeed it is the refuseal to accept that resignation that is the reason I used the phrase drafeted in the first as you should know by now, you have sent two harassing me on this subject<

And you have insulted anyone and everyone (except Len Anderson, who is menatally ill anyway) who was a vet. And I haven't harrassed you about anything. I have asked you to stop lying and to stop insulting and humiliating yourself and American vets.

You won't, because you get off on insulting people. You are doing it here by trying to insult the folks of RRCB's intelligence by bringing your whining and flailings to another NG where you hope being a pest is acceptable. Well, it not anymore acceptable here than it is elsewhere.

>Do mention that you threnten to kill me in the preceeding post. and that you have had explained to you that the exustance of legal aias etc is not a crime, I not on the lam I simply don't want to return to being harassed by said absive exwife, I guess I have you indeed, unless you are.. no that would be paranoid<

Yeah...right....I would risk prison to threaten the life of a twit like you.

>Gee Steve but you can't understand I want to tortured by a gorgoues Female not a code key.<

No...your ads are seeking men. Some women, but you make a point of seeking men to urinate on you...Now THAT I would travel to Illinois for. And drink a case of rot-gut beer on the way up there!

>Excuse me another Stevie distortion The Doc is willing it the ARS that is not, The ARS allows waivers of 13wpm morse not 5wpm morse<

It's NOT the "ARS" that's holding you up, blockhead...It's the FCC and your refusal to go to a physician who specializes in the correct discipline of Medicine for neurological and learning disorders.

>Never claimed a BA in Chemical warfare. I claim a Masters in History, based on my work in the History of Law. If you are going to call me lieing at least get straight what you say I am lieing about<

Yes you did. Said it was your degree that got you railroaded into this Army commission that you can't get out of.

LIE LIE LIE LIE LIE LIE ! ! ! ! ! ! ! ! ! ! ! ! ! !

>No I don't lie, You insist that you and only have right to decide how I may think or express myself and call it lieing when it fails to suit your way of thinking<

MY WAY OF THINKING is to NOT misrepresent myself to people who have the contacts and resources to prove me wrong.

You are NOT an Officer.

You do NOT have a degree in "Chemical Warfare" (there is no such thing, even in the Armed Forces acadamey's)

You do NOT have a degree in the law, history thereof or otherwise.

You were NOT drafted, nor are you being held to any kind of involuntary servitude in the Armed Forces.

And lastly, you are NOT worth the trip to Illinois, even to pee on you! So GET A LIFE!

This radio is a CB that is made and operates like a mobil radio telephone. It
is 23 Channel AM only. The Audio is switchable from the speaker to the
telephone handset. It receives and transmits OK, but is dusty and needs
cleaning. Make me a cash or trade offer for Radio or computer eq.
Thanks

well that sure sounds pretty, but if i want , i shall operate my illegal equipment the way i see fit. now as far as cussing and operating out of band, tell it to the hand bud, i haven't done that in years, also why don't you go to the ham radio ng and tell them to quit using illegal power on 11 meters, seems to me a lot of people are going to be caught up in this and some of them will most certainly be hams, just a thought...............bye,........bye,bye,bye.............

Well sorry to say, but you are being way to
general. I'm lucky if once a year I go above
27.405 or below 26.965. So your statement that
"I'm fair game" is Bullshit!!! I had my "Ticket"
once and I'll tell you, it practically was the
same as listening to channel 17 around here.
That's why I said you should enforce yourselves
before you come down to whine on the 11 meter band.

Oh by the..... Small minds, breeds narrow views......

The Landshark

HTX-202: Radio Shack 2 Meter HT. Works good. Slightly chipped where the battery
slides in, but does not affect operation. No nicad, but I will include the AA
Battery pack with the unit. $80 Or trade for a good scanner with the 800 MHZ
band.

Thanks

The government can't even control themselves. How do you expect them to do anything about this. I do see them doing something about the stations that are completely out of control with power and causing problems with the TV's, but as for a simple traffic stop and seeing the radio sitting there, I don't think a thing will happen because the cop won't have a clue what he is looking at.

Matt,

     Back in the days of Norman conquerors, CB radio
was "primitive" at best.  2 channel, 100mW handhelds
were common, nobody worried about antennas.  The famous
Norman Vertical Antenna that you are talking about was
recently found by archaeologists and is the only known
specimen like it.  It was probably never used until
CBs became more diverse, circa 1640 A.D.

The secret to a pawn shop John is that the owners know full well that most of their customers are not mobile people and most likely don't have any options to buy the product anywhere else. Its kinda like a food market in a poor neighborhood. The owner of the market knows full well that the customer's that use food stamps aren't going to take a bus 1 mile down the road to save 30 cents on a pound of butter, therefore they can gouge the price.

Please be specific, just which hams have you heard lately whining about loosing 11 meters? I have been licensed since 1961 and could count on my two hands and have fingers left over the number of hams I ever heard say anything about 11 meters being taken away, and that would have been years ago. Hams could not care less about loosing a few kilocycles from 26.960 to 27.230 when they have 28.0 to 29.7 at 10 meters?

Sorry Wildcat. The word is Reign. Put riegn in your spell checker and watch in horror as you realize once again that you are a bonafide idiot. As to the legitimate fear expressed by RFENFORCER that Hams will be victimized by the new law, simply produce a copy of a valid FCC license and they will let you go on your way. For my part, a little inconvenience is worth the long overdue enforcement of the law. Also; for those that speculate I am a Ham, let me assure you; I'm not. I simply enjoy conversing on the CB band, in a quiet, friendly, legal manner.

Not necessarily true. Given the ridiculous amount of laws on the books today, there's no way to assure a police officer will know about and/or understand the ham exemption.

Consider the similar situation of mobile scanner laws. In most states, licensed amateurs are exempt from such anti-monitoring laws. Whether the presiding officer is aware of this (and decides to accept the exemption) is anyone's guess. I personally know licensed amateurs who have had their mobile scanners CONFISCATED by overzealous and/or uninformed law enforcement personnel.

Sure, they can go to court and get their equipment back. But this requires THE INNOCENT AMATEUR to incur the expense and inconvenience of taking time off of work and possibly hiring an attorney. Not to mention being denied the rightful use of his property during the period of confiscation and possible damage to said equipment while it is being "held" by the police.

Same thing will happen here. It's not a good idea.

Dwight and Lina,

I use both of these radios on a daily basis! The receiver in the 148gtl is vastly superior to the receiver in the 2950, so what downgrade?

The transmitter in the 2950 produces more power than the transmitter in the 148, so who cares? There are ways around that. I use the 2950 in a sparsely populated area where maximum receiver selectivity is not an absolute necessity because there is not a large amount of traffic!

The 2950 receiver front end would never "cut the mustard" in the middle of a truck stop with 400 trucks and god knows how many of them using the band at any given time! This is where the receiver in the 148gtl outperforms the receiver in the 2950, or just about any other export radio for that matter. The fewer channels that are covered by the receiver, the better the receivers ability to reject interference from signals on adjacent channels. As far as the receiver is concerned, going from the 2950 to a 148gtl will be an "upgrade" every time!

Jack

The receivers in export radios, by virtue of the fact that they cover such a wide range of frequencies, requires a lowering of the "Q" in the inductors of the receiver front end to achieve the bandwidth required and makes them a poor choice if receiver selectivity and immunity to adjacent channel interference is a major concern!

If the manufacturers of this equipment wanted to make a major contribution to diminishing the "logjam" in the 11 meter band, they would produce a transceiver that takes advantage of 3 or 4 stages of conversion instead of the tired "dual conversion" front end so proliferate in all equipment that is currently on the market, type accepted or otherwise!

This is one of the primary reasons that savvy operators operate amateur equipment in the citizens band service, so that they might take advantage of state of the art receivers with "tight" receiver front ends which provide a large measure of relief from "bleedover" and other forms of adjacent channel interference! Imagine having a station operating one channel away from you at a distance of a mile or so and not hearing any splatter on your frequency! Not much attention is given to this, the most important half of the transceiver, the "receiver".............

I would think Mr. "liners are illegal" would love this shit. You are always whining about how "Linears are illegal" and free banders should be caught and fined. WHAT A FUCKING HYPOCRITE!!!!!!!

Now that laws are being passed that could effect YOU, whether or not you are doing anything wrong, you start whining. You come on this newsgroup several months back PREACHING part 95. of the F.C.C. and posting statements every time someone asked "About my linear" or "how do I mod my 148" and your classic response "It's illegal see part 95." or "It's against federal law to mod that, and big fines and or jail" Now that they are going to pass laws that will screw you too, you start this whining........ Go fuck yourself, you live with what's been created, whether you like it or not, but stop being such a hypocrite and whiner.

I hate dirt bags like you and your Butt brother Joe, I would thoroughly enjoy just keep this going for a long time..........

The Landshark

hi jack. you said something there that i try to explain to people all day. the 2950 is a good and usefull radio it just sucks in the recieve department. where i live (right by three freeways) it isnt worth the money. i would opt for a 2510 more than the 148 simply because its more coverage but still a very capable radio.

Maybe now I can have a decent conversation without having a rude person running a big 500 million watt amp and a wide open echo mic cut in. It will be nice to take the "heater" out of the car too.

```

Tim,

Funny you should mention that. I have found that the 2510 performs fairly well in this department! The 148gtl and the 2510 are the 2 radios that grace my bench at the shop, for these very reasons! I have added an if notch bandpass tuning circuit to the 2510's receiver and I find that in conjunction with the noise blanker the receiver provides excellent performance. (This replaces the swr cal control on the front panel and the cal control is preset with another variable potentiometer so that the swr function still operates). Thus, the stock appearance of the front panel/face is preserved.

Jack

Bob,

Look around and ask some of the org. CoCo team and ask them why they never posted to this group . . .

ask Tommy I heard he is back

At which point you will be slapped with a Notice Of Apparent Liability
for failing to make your station available for inspection by an
authorized FCC representative. Start saving up your $20,000.

>PS: The word is spelled RIEGNED............If you going to attempt to

There is no word in the English language spelled r-i-e-g-n-e-d. If
you're going to be a spelling cop, better get yourself a spell
checker.

It is not a ham exemption. It is an exemption for ANY kind of FCC
station license. That could be a ham license, a GMRS license, a marine
radio license, etc. The type of license does not matter, the point is
that stations licensed by the FCC will not fall under the scope of
this law, only unlicensed stations.

Oh my God, I just love this stuff. You are BOTH wrong. Using 'reign' instead
of 'rein' is a common error with an uncommonly used word, but 'RIEGNED' ???
Give us all a break. You know what they say?? "People who think they know it
all are particularly irritating to those of us who do."

Sorry Wildcat. The word is Reign. Put riegn in your spell checker and watch
in
> horror as you realize once again that you are a bonafide idiot.

Sorry Oh fool of the airwaves but the word RIEGN (pronounced reen) is a legal term, the definition of which is to have a person at ones will by virtue of a legally binding contract. I really dont expect the "Fisher Price" spell checker in your computer to be capable of advanced English.

Maybe when you grow up, Ill send you a complimentary copy of Blacks Law Dictionary, that way you can attempt to impress people at parties with your superfluous vocabulary.

John, there is no such thing as an ENFORCEABLE $20,000 fine from the FCC for refusing to provide entry into ones domicile. I dont who told you you could be fined for not letting the FCC in your house but its apparent you've bought it hook, line and sinker. The ONLY time you can be fined for such an act is when a judge has ordered entry into a house by virtue of a standing search warrant and the occupant of the house refuses to acquiese. This IS the only time a monetary fine can be LEGALLY issued. You, like many other Hams think the FCC has these broad powers that allow them to trample on ones Constitutional rights, which could be the farther from the truth. Pick up a book instead of believing what everyone else is saying.

<<<   I hate dirt bags like you and your Butt brother Joe, I would
thoroughly enjoy just keep this going for a long time.........>>>

Since you have included derogatory comments to me in several
of your posts, you clearly seem to crave my attention.

I regret that I won't be able to accomodate your needs at this time.

I do, however feel bad for the family of such a person that is
so filled with hate that he is compelled to post obscenites
and taunts to others over the internet.

Get help.

-J

i agree, i have had both and thou art correct oh wise
jack.......bye,....bye,bye,bye.............ps. i think the 2950 was an
abvious ploy by the manufacturer to get around the rules and sell these
radios to unlicensed individuals. and i believe that mainly because of their
wide banded tendencies and the ease with which these radios can be modified.
i think the older 2950s were better than the new ones and that goes for the
cobras as well. just my two cents worth, ice cream man out and going to the
truck to sell goodies to the neighborhood children so i will have enough
money to buy me some radio equipment.........................icm
out..........

nope the secret to pawn shop ownership is knowing full well that you have to
deal with less than honorable people , at least most of the time. also good
location for this type of business is necessary. you have to be close to
both your potential customers and potential sellers of shall we say, 'hot
merchandise'. and finally , you must be willing to bend the rules as far as
they will bend and cover your ass with paper , as far as the laws of your
state necessitate. all this and not having any scrupples about it as far as
morality and ethics and well i think you are set...........just my two
cents worth, icm , the artist formally known as pinhead, back quiet and
hiding in the bushes , from those mean old gooserider keydown
boys,ooooooooooooohhhhhhhhhhhh, they be buggin.........icm out..........
The artist formerly known as "Wildcat" wrote in message ...

I own a TS430S and it works great on SSB,it had the MARS-CAP mod when
I got it so I can't help but there are also other mods for the noise
blanker and such on QRZ.I look forward to seeing what others say,but
whichever mod Kenwood recommends is the one I would do.

Exactly! The marine radio service requires type accepted equipment that
adheres to the technical requirements of Part 83.

The same would be found in the aviation, land mobile, FRS, GMRS,
citizens Band, and other commerical services. But NOT Amateur Radio.

You will never see a tag on a ham radio that says "Type accepted for
technical requirements of Part 97"

You WILL see a tag that says "FCC approved" or "Complies with FCC Part
15" or something similar.

I agree 100%. I've been saying this ever since the "local Enforcement"
idea first reared its ugly head. We've had discussions about this on the
band. One of our locals is a cop and even he agrees that most cops
wouldn't know a mike cord from a coax connector.

Most of these "bills" have language in there exempting hams, and other
licensed radio ops, and presumably flashing your license to "officer
Friendly" should be all that's necessary to get him to back down. But I
wouldn't trust it.

Give the money to the FCC and let THEM do what they do best.

Well, ya runs your stuff, and ya takes yer chances...

If some of these "power stations" are hams, then they deserve to get
busted as well. Thos who make the most noise will attract the most
attention.....

Fuck them and fuck you too you self hating pile-0-shit. How is it that you involve yourself with cb radio and this news group but you have nothing but contempt for either?
I can hear the squeaking from you sitting there under you flat slimy rock saying......"they're gonna get theirs now!"
Are you one of those poor little kids that got the shit beat out of them in school twice a week whether you needed it or not just because you were such an abortion from a buttfuck???

Beams concentrate the power or gain for much further communications
and to help reduce noise from other stations ,etc.A good 4 element yagi
could have 9.5 DBI compared to the popular A-99 verticals puny 0-3 DBI,a
difference of about an "S" unit! and bigger beams do even more.

Robert,

Yes you can use the SLA 36" whip in place of the 62" whip that comes
with the Wilson 1000 Trunk Lip Mount Antenna, that is the design
intent. Lets say you are favoring us, or any other company for that
matter with the order, ask for the Wilson 1000 Trunk Lip Antenna with
the SLA whip in place of the regular 62" whip. You would just pay the
difference of the whip.(approximately $3.00)

As to your next post:

Tony

Could you do the same with a K40 mount and an"SLA"?

I would not suggest that unless you want to experiment. The Wilson SLA
was designed to replace a 62" whip
whereas the K40 whip is 57".

Tony

Interesting. However, in the context that I intended (I should have perhaps said something to this effect...) Mark is like a volunteer fireman or paramedic.

He does not receive compensation (that I know of) for his trolling, but he certainly attacks it witht the zeal of a professional.

Too bad he doesn't apply that energy to something CONSTRUCTIVE!

It's hard to believe there are so many radio users that react with hostility when it comes to giving up their ILLEGAL activities. I won't dignify them with the title CBers. These radio users hurl epithets, whine, piss, and moan. They accuse, wheedle, justify, (and even make up false legal terms). These wannabe "big guns" and "freebanders" are nothing but the equivalent of litterbugs and stop sign runners. They have shit in the sandbox. They have brought dishonor to an honorable hobby. They have caused us to come under undue legal scrutiny. They have made it difficult for us to enjoy our hobby, by causing an unknowing public to paint us all with the wide brush of disfavor. Because of these inbred degenerates, all Cbers are thought to be of their ilk. As I stated, however, it amazes me that they would so vigorously defend the indefensible! We want our illegal amps. We want our "extra" channels. We want our potty mouthed antics to go on as always. We want our dumb-assed (attention seeking) roger beeps. They are like 2 year olds, who, when caught with an entire bag of cookies, sob hysterically when Mommy takes them away! Grow up and obey the LAW, or get out of our hobby! Yes OUR hobby. You forfeit your privilege to operate when you disobey laws created by a Democratically elected government. If you don't like the law, write letters and campaign to change it...but, I'm shouting down a well again...most of you are too lazy to get jobs, forget about actually registering to vote...

===
So 30 hams are active on CB and 10 of them run high power and use foul
language in your area that you personaly know about that is 33-1/3% of the
hams in your area breaking the rules How many would you consider alot?
These results are based on your facts not mine. So to answer your question
based on your

My assumptions are only from what you have posted , you said you were not a ham in your previous post, this lead me to believe you did not pass the test either and if that statement is not true you are now a liar as well as a swler. You don't know what you are yourself you said you were a swler nothing more. Shut up now before i tear you a new arse.

I am debating on what type of antenna to put on my Jepp. It has a soft top so I don't have any where on the roof to mount it. I am thinking of a 102" whip off the back bumper. This is about the only option that I can really think of. I have a mag mount on the front fender right now and about 2 miles is the reach for it and I want further than that.
Thanks A Million,
Tinker

The reason for this is many Hams are mad that the FCC is targeting the Amatuer Band and not the cb band so they cry about the amps and freebanders etc, when in reality many hams are CBers in hiding and are also contributing to the mess.

Charles bring your bird meter and a 10 kw slug along with a fist full of
money I will show you 10 kw from a mobile rather easily of course this is
into a dummy load.
I guess of you never heard or seen any 3 phase alternators into a step up
transformer producing 8-10 kw plate volts. But your right who am I
bullshitting . Have a good one

OK,I would rather have him bleed on my TV (I don't own one but I am
trying to be rational).There are no known drug dealers around here and
no burglaries because we have made them a priority.
People selling and using amps think its OK and people selling and
using crack usually think thats OK.

Hi Tony,

Do you know if any of the Wilson Trucker or the Silver Load
Fiberglass antennas will work with a magnetic mount?   Center loaded whip
is supposed to be better than base loaded is the reason I am asking.

Thanks,

Duane

How does one know which handle to pick for a name? Could I just start
calling myself _______ if I chose, or is there some sort of directory of
names already in use?

Thanks,

PN

I don't see what is wrong with the Uniden PC122XL at: http://www.copper.com
For $79.
If anybody knows any problems or concerns with this model, please tell me

```
now before I buy it.

Thanks.

>Beg your pardon, when you use a cb, even though you are not licensed,
```

>you are still bound by FCC regulations and you must make your equipment
>available for inspection.

everyone that transmits rf must make your equipment available for inspection

CB,HAM,FRS,GMRS,AM BRODCAST,FM BRODCAST,POLICE,FIRE,AMBULACE
ALL PART 15 DEVICES,CORDLESS PHONE,RC,WALKYTALKYS,
MICROWAVES LINKS,PAGING TRANSMITTERS,CELL PHONE
AND OTHER STUF

If you do not you may will be hit with a NAL

Why you say part 15 devices must be available for inspection
becuse ther could be someone with a old radio that is generating
noise around 150mc or so and wiping out police and ambulance coms
with in a 1 to 2 mile radieus with out that rule then she or he could go on using it

and do not say it can't happen well ther has ben a few cases in which that happened

To all those that think the FCC cares,

I have sent in 5 complaints about a local person that Dead keys and
blocks a city, and now hes not dead keying hes retransmitting scanner
police signals and jams the air waves more. He use 2 radios some how and

```
when we all change channels, within a matter of a few minutes hes
blocking a new one.

After some very stupid comments from the FCC I was informed by a person
there that there were not enough employees any more to chase down
offenders and that that 11 meter band was not a priority.

Thats why it isn't licensed any longer.

Well after that comment I sent back another note to the fcc with MY
license number and now they choose to ignore the complaints. I have had
all in my area send an email to the fcc to the person I was contacted
by, and now all we get is retured email.

So tell me this    DO YOU THINK THEY CARE   !!!!!

Duane,

The Wilson Fiberglass antennas will definitely work with a mag mount, however caution should be used in the size selection of the magnet. I would not go over 2' or 3' with a five inch magnet. Any size over that should be used with at least a triple mag mount.

Tony

There really isn't any such database or anything like that.
If you have a handle in mind, just listen around in your
area for a little while and if you don't hear anyone using
it you're probably safe. Don't be surprised or upset if you
find out that some venerable old timer that passed away had
that handle and the folks in your area don't like it being
used out of respect. Kinda like a sports players retired
numbers.

Hey dude!!!!
Been a long time!
It's good to hear you out and about!

If you noticed, this piece of wanna-be-what-to-do wish he had 2879's too,
did not reply to my request to say his trash to my face. He does not have
the guts to do it.
Imagine if he did try to say that to my face!!!!! That would be the funniest
thing anyone would ever see.

First hand experience moron. the only reason your a swl'er is because you
cant pass the test. Your statement doesnt make sense, your not a ham ,but
you have to put up with comments from non hams and cbers .Who cares go cry
to someone else about your stupid problems .

Hawke <proudhawk@interwrx.com> wrote in message

Friend,

If the FCC or any other government agency feels like entering YOUR HOME they sure a shell will do so. They also are under no obligation to knock first. They may very well crash the front door in. What do you think they have those battering rams for? They sure do NOT need your permission or anyone else to enter. Better just step back......

PS
10KW from a mobile is ridiculous. Who are you trying to bullshit?

You guys are dead wrong , I have seen firsthand and was in the vehicle at the time the FCC rolled up on a guy in Phila running 10kw out of his mobile, they knew he was transmiting since they got many calls of him creating interference from sitting in the same spot daily, but they could not see any radios mounted when they looked in, no microphones, no amplifiers, just the antenna on the suburban they asked to look inside and were turned down, knowing they didnt have any evidance of a radio they stood there with there Johnson's firmly in hand So you tell me who has to make there station available. A licensed Ham must, since when you take that test you have no choice you are now on record as a amatuer station and must make your station available. So what you are saying I must let the FCC in my house to check out my cordless phone. I don't think so.

The PC122 is a good all-around performer a probably the best SSB value you will
find.
BTW: $79 is a VERY good price for that unit.

Indeed! If type acceptance were needed, then we couldn't put any of
our personal home brew transmitters or amplifiers on the air at all,
since I don't know of any hams willing to spend the time and money to
have their equipment put through type acceptance testing.

By definition, IT IS NOT type acceptance, otherwise all those transmitters you've built over the years are illegal. Right!

My dad needs a cb and antenna for his mini van. He doesn't want a lot of knobs. He's a no frills kind of guy. All you gurus please help me out. By the way he wants an antenna that can work great and still get in the city parking garages. Thanks in advance. Please email me and the group.

Of all the Bulverisms (see the C.S. Lewis collection "God in the Dock", part III, chapter 1 for an explanation) I've read online, this is one of the silliest. Exactly how did you come up with this "insight" into Hawke's motivations? Do you have a gift of telepathy you haven't told us about? Have you commissioned PIs to investigate his life? Out of all the miriad reasons why a person might be an swler, but not a ham, is there any valid reason you can give why you picked out this one?

>Your statement doesnt make sense, your not a ham ,but
>you have to put up with comments from non hams and cbers.

It made perfect sense to me. He has no transmitters, but does have a quite visable antenna system. Because of the visable antenna system, his neighbors tend to blame him for every little glitch on their TVs, radios, and phones, despite the fact that he's not operating a transmitter. This is a problem any ham should empathize with.

Ben

yes that is correct
if they did't have time to zero in on the transmiter they have no evidance he is
runing a station
and if they can not see a radio they can't inspect a station that don't exist
if they did zero the vehicle out or did see a mic or any other thing
He would have ben hit with a NAL
He was very lucky
>So you tell me who has to make there station
>available. A licensed Ham must, since when you take that test you have no

When are you usually on the radio? I might not be making the trip down there, boubt that though, I can usually talk where I want to.

I listen to (27.385 and 27.555 LSB) quite a bit, along with my group channel 27.405 USB quite a bit.

Do you talk to the local group here on 38lsb? 202(EW), Rebel-215, Janet, Cindy and all them? They are north of me, so if they can make it to you so can I.

My wife and I both ride motorcycles with Uniden Pro538w CBs and antennas mounted at the rear side. Transmission and reception are both good and clear at rest and around city speeds. But once we're on the freeways, it sounds like we're on different planets.

(1). Use "no groundplane" antennas from RadioShack, which are about 2.5' tall-- with SWR readings under 1.5:1 on both CBs, for all channels. These antennas supposedly don't require a groundplane. When I looked at the base of the antenna, I also found that the shielding of the coax is not grounded as usual at the mounting location. But SWRs were good.

(2). Due to poor performance at speeds, I installed "regular" antennas with shield of the coax grounded onto the motorcycles. These antennas stand about six feet, also from RShack. SWR readings on these antennas shoot off the meter on all channels (passed the 3-mark.)

** For the antennas in (2), I used the same cables which originally came with the antennas for (1)-- except, I grounded the shielding (braided) conductors. I have not tested (2) on the freeways, since SWRs are so bad.

Please advise.

Thanks,

Winn.

Good screen name.... considering I would recommend a 1 watt resistor incase
this person likes to throw dead keys at any time without "smoking" his
resistor.

Actually should be as follows:

This one goes under the heading: TYPICAL JACKASS POST

Cbradeeo wrote in message <19991011133725.13272.00000111@ng-ci1.aol.com>...
>This one goes under the heading: TYPICAL CB MENTALITY

^^^^^^^^^^^^^^^^^^^^^^^^^
So all "CBers" have this mentality?

>
>I heard some people arguing over the use of channel 31. One guy said he had
>been on the air since 1961 and had been using 31 the whole time. The other
guy
>said the channel was hardly ever in use, so he and his friend were gonna
talk
>for a few minutes. The first guy then proceeded to whistle, make fart
noises,
>and play country music over the first two guys who wanted to use the
channel.
>Even though the other guy did not want to make a call, had no one to talk
to
>and had not been using the channel, he still thought he had the right to
"hold
>the frequency" for his own use, because he and his buddies "always talked
on
>31."

This is just an assumption. Though, if I understand your post correctly, I would say you do not have much knowledge of VSWR or propagation in itself. Therefore, I would not recommend you do ANY of the modifications that people may list to you.

>"We can't control you, but you must be controlled if you are
>to exist; therefore, control yourselves, or cease to exist."
>- A government ultimatum to Amateur Radio, 1921.

<<sounds more like hitler or stalin cir. 1938.
jeff>>

The world was a different place in 1921. You might be
interested to read a book called "200 meters and down".
by Clinton DeSoto.

The early "hams" had a bit in common with unlicensed
freebanders of today. They were totally unlicensed (as
the FCC did not yet exist) and unregulated, and except
for their common bond as radio hobbyists, they were
not yet organized. But with the sudden growth of

broadcasting and the resulting scramble for frequencies, the
only way "amateurs" could survive federal prosecution (and
extinction) was to band together and fight for a legitimate
share of the radio spectrum. To gain this, they agreed to
a licensing requirement and to be persoanlly accountable under a
set of rules and regulations administered by the precursor
to the FCC. One of the ways they convinced the US gvernment
not to do away with them was to prove that their "hobby" was
crucial to advancing the state of the radio art, and also would
be utilized as a valuable public service in times of disaster,
among other things. It's a fascinating story, well worth reading.

Anyone got a schematic of this rare gem? I need one to correct some minor
problems. If anyone has one I would appreciate if they could scan and email me
a copy, even if it's in pieces, I can put it back together. Also need a number
to obtain a power switch for this unit. The RF goes thru the main power switch,
so I need the original three pole unit. Someone told me that Texas Star was the
original builder of these? Toll, anyone know?

The Radio Amateur's Handbook is correct. I think Toll Free is talking about the ideal case, where the coax attenuation is negligible. If that is the case, then VSWR does not affect the coax loss significantly.

Amateur's used to make good use of this characteristic by running open wire feedlines - which are close to being lossless. The would use an

"antenna tuner" between the transmitter and the feedline. The antenna
might be such a mismatch that it caused a 10:1 VSWR on the feeline, but
that did not matter.

This thread started out with someone claiming that you could change the
VSWR by varying the length of coax. This is not true. What is true is
that you can change the input impedance to the coax by varying the length.

: No theory behind it at all. It just signals the end of one parties
: transmission. Makes it easier to communicate. Just ask the
: astronouts....

It was used by the astronauts primarily on moon missions. The reason
for this was the LONG propogation delay time. With over one second
delay from transmission to reception - that would mean a lot of lost
time over a period of thousands of transmissions during a day.

: rhombic... then what would you classify it as?

I would classify it a "cubical quad". A rhombic has its main radiation lobe or lobes (depending on the termination) in the plane of the wire, not at right angles to it.

A rhombic will not have directors or reflectors.

Rhombics also tend to be at least 1 wavelength on a side - which would make the total loop length greater than 4 wavelengths.

The FCC has issued a form for alternative enforcement options. Since
they don't have the manpower they have released the proper papers to allow

bounty hunter to enforce FCC rules. Anyone can do it, and it works best in groups. The hardest part is finding the signal. From there go to the local hardware store and pick up some nice sharp compact cable cutters, and some bolt cutters. If you really think it justifies it, if this guy has done nothing at all nice, and the entire city agrees and sticks together---CUT HIS COAX AND ANTENNA. (NO FLAMES) What would you do?

Ken Waters <kenh2os@pacbell.net> wrote in message
news:3803D47F.D3B22466@pacbell.net...
To all those that think the FCC cares,
I have sent in 5 complaints about a local person that Dead keys and blocks a city, and now hes not dead keying hes retransmitting scanner police signals and jams the air waves more. He use 2 radios some how and when we all change channels, within a matter of a few minutes hes blocking a new one.
After some very stupid comments from the FCC I was informed by a person there that there were not enough employees any more to chase down offenders and that that 11 meter band was not a priority.
Thats why it isn't licensed any longer.
Well after that comment I sent back another note to the fcc with MY license number and now they choose to ignore the complaints. I have had all in my area send an email to the fcc to the person I was contacted by, and now all we get is retured email.

So tell me this   DO YOU THINK THEY CARE   !!!!!

MaryW4ME <maryw4me@aol.com> wrote ...
: In a post on the type acceptance of amateur radios in the U. S. there was
a
: reference to an "FCC Number." The FCC number IS the type acceptance
number of
: that radio. All you have to do is call the FCC and feed them the number
off
: the radio ID plate and the FCC will tell you what radio you have and when
the
: original type exceptance was issued. I am a retired commercial radio
service
: technician. I have dealt with the type acceptance for over 25 years
making
: sure that the customers radios are legal from the standpoint of type
: acceptance. A good example is the Motorola Motrac/Motran, GE Mastr Pro,
and
: the GE Prog Line. They are all over 25 years old and the type acceptance
has
: been pulled by the FCC. Per the Communications Act of 1934 from which the
FCC
: Rules and Regs derive MANDATES type acceptance and licensing of all
: transmitters in the U. S. I made mention of the FCC ID number on the
radio

: model or id plate. The type number is there by law. Amps for 6 and 10
meters
: can be built with the approval of the FCC..... They too get an FCC number.
: Marilyn Hartley W4ME.

The guys might be right. Our equipment may only be
type approved rather than type accepted. It is based
on our technical expertise compaired to other services.

It doesn't gain you that much. By stacking (co-phasing) two identical antennas, you only gain 3 dB gain - at the maximum. The rejection improvement off the sides is only - 3 dB, at the best.

This generally makes little difference in perceived volume - although it will make your S-meter read higher.

hi all!

I got a few of those GE 5980 handhelds quite cheap (about $15 incl. s&h at OnSale), and the range of these units suck. We tried it out in the city and got barely 300m. Now, after reading posts in this newsgroup, I assume the main culprit is bad antenna. As I don't want to invest more in antenna than in the unit itself, the question is: can i make my own antenna that can be either attached instead of stock one, or mounted on a car roof with some cabling? I'm new to radio scene, and don't know alot about all this stuff. I believe I have to use coax cable (what kind?) to connect to the antenna, what is the wiring at the antenna end? Maybe I can even use a coax cable itself as antenna?

Thanks,
Peter

: There was lots of vhf-uhf space available which is where it should have
: been, or better yet, never allocated.

Unfortunately, VHF equipment was very expensive in the late 50s. The FCC
wanted the radios to be affordable - so had no choice but to use an HF
band segment. As 11 meters was not being used by the Hams - 10 meters
is generally better - it was the logical choice.

Bull! Hams were not using 11 meters. Why should they, when 10 meters
was better for DX - and was a larger band segment?

If Hams had been commonly using the band, the FCC would never have
reassigned it.

: Furthermore, placing the service here insured that propagation
: characteristics at 27 Mhz would guarantee the eventual problems that
: we now see on the band with respect to signals from thousands of miles
: away booming in on all 40 channels.

Agreed. For some reason, the FCC did not feel this would be a problem.
I suspect that they never thought it would become as popular as it did.

>   Claims to be a "drafted" officer in the United States Army Reserve, but
>they won't let him "resign". This is very peculiar since Mark is openly

Indeed it is the refuseal to accept that resignation that is the reason I used the phrase drafeted in the first as you should know by now, you have sent two harassing me on this subject

>gay/bisexual, and openly solicits sexual encounters for same on the Internet.

And your point is
>
>   He originally tried to tell me (a retired Marine Corps enlisted man) that
>he was a "lieutenant colonel" to try and get me to stop challenging his posts
>on RRAP, then when confronted with the fact that DOD doesn't know him, he
>changed that to "just" a lieutenant, and he is serving under an AKA since he's
>on the lam from an abusive ex-wife.

Do mention that you thr額ten to kill me in the preceeding post. and that you have had explained to you that the exustance of legal aias etc is not a crime, I not on the lam I simply don't want to return to being harassed by said absive exwife, I guess I have you indeed, unless you are.. no that would be paranoid

```
>
>     Mark also claims that trying to master the 5WPM morse code for the slowest
>of HF Amateur licenses is "torture", yet he ALSO solicits "DOMME/SUBMISSIVE"
>encounters, with him being the submissive...guess he LIKES torture?

     Gee Steve but you can't understand I want to tortured by a
gorgoues Female not a code key.

>
>     He COULD get a medical waiver for his alleged dyslexia and other

     Now you are not even quote the regs right

>neurological deficits, but he keeps ignoring the pleadings of a dozen others to
>go to a NEUROLOGIST...Mark for some reason believes his ALLERGIST should give
>him the waiver, but the good Doc won't do it...wonder why...?!?!  (This from a

     Excuse me another Stevie distortion The Doc is willing it the
ARS that is not, The ARS allows waivers of 13wpm morse not 5wpm morse

>person who purports to have a 246 IQ...guess that doesn't include the ability
>to take a hint!)
>
>     Claimed only a few months ago to have a Bachelor's in Chemical
>Warfare...NOW states he has a MASTER'S in "History of the Law"

     Never claimed a BA in Chemical warfare. I claim a Masters in
History, based on my work in the History of Law. If you are going to
call me lieing at least get straight what you say I am lieing about
>
>     That Mark would insist that the "newcomers" to Amatuer or CB radio know
>that 11 meters was once an amateur allocation is just another attempt by him to
>stir an empty pot.  He just likes to hear the ladel banging inside the pot!
>
>     Sorry Mark!  Caught Ya!  You lie in the other NG...you lie in here!...WHEN
>WILL IT STOP?!?!

     No I don't lie, You insist that you and only have right to
decide how I may think or express myself and call it lieing when it
fails to suit your way of thinking

Indeed He does. He sent two years relentously attacking in Usenet,
email. there is evidence that someone called the cops in my town
trying to find my address (may or may have been Stevem there are
several OT in Policy with way too much time on thier hand, somebody
may have trying to spook me in to taking his death threat more
seriously)

It is interesting tough how much He claims to know vs how much
he does

I am getting a similar problem, only it's not buzzing, but a constant 5-7lbs of radio 'noise'. I lower my RF gain on my 2510, but then I cannot hear signals that well. All signals seem to be buried by this noise. I notice that when I put the 2510 in my van and drive away from the house, the signal level of the noise decreases.

Called the Elec. co, who checked thier lines near my house to rule out bad wires - all ok there. Down the road there is a large transformer on a pole, but when I drive closer to it, the signal meter level still lowers as I move away from my home.

All computers off - all major appliances off, still getting the noise levels.

Anything I can do to 'filter' this? Could it be that my antenna is too close to the power lines (35-40 ft.)?

SWR matches out within specs. Transmitts fine, radio checks as far as 40 miles away have confirmed good Tx. Just this noise is making RX nearly impossible on weaker signals.

HELP!

Thanks in advance

I have a Uniden 2510, which since I moved to my new home, I notice I get alot of static noise to the tune of about 7lbs on some days. I lower the RF gain, but lose faint signals then. Antenna is an Antron 99, and the SWR match is perfect (nearly).

What can I do to reduce this noise level? Moving the antenna is an option, as it is about 30 feet from some power lines that I think could be the problem. Called the electric co, but they report nothing foul with the lines.

Still, I'm getting this interference, and would like to resolve this.

Thanks

There you go making assumptions.
what makes you *THINK* i didn't pass any test?
Also, you have no real clue who I am. I COULD be a ham,
or i COULD BE a CB'er. Problem is, you just can't tell
in here , now can't you?

Funny thing about assuming: makes an ASS out of yoU and ME.

Hawke

I am not so concerned with the power capability of this antenna...........but does it work? I live in a townhouse community that will only allow an outside antenna of less than 1 meter in size. I have seen this antenna for sale on the web, but NO feedback from any owners.

Good or bad share your knowledge about this antenna.

thanks,

BK

Are you sure it is your house? If you live in a residential neighborhood, it might be a neighbor's house, but pull the main breaker on the house and see if the noise goes away. if it does, you know the problem IS in your house. Start turning breakers back on one at a time until the noise returns, and then check that circuit for the trouble maker. Beware of things like door bell transformers.

> It is still a fact.

No, that is NOT "type Acceptance", that is "Part 15 compliance". You are still confusing 2 sets of completely different requirements.

Part 15 compliance among other things, makes sure that an electronic device does not emit an out of band signal strong enough to interfere with users of other services, as well as sets standards for spectral purity.

Type acceptance is an ADDITIONAL set of requirements that are specific to the radio service that the equipment is to be used on. In the case of CB radio, things like 40 channels, modulation control, power output etc. This is specific to the CB service. In order to be type accepted for CB, you can't, for example, have a radio with VFO frequency control, it has to be channelized and PLL controlled.

None of this applies to the Amatuer radio service. Hams are allowed to use VFO's because the HAM is responsible to know where the band edges are. The ham is allowed to adjust his power because he is supposed to know the limits and is responsible enough to adhere to the rules.

It is this technical competance, that allows the ARS to not require type accepted equipment.

The 1-640 was a 23 channel radio. $100 is kind of steep for something
that obsolete. Nice radio in its day, but I've seen them go at hamfests
for $30.

I have a Realistic TRC-212 (21-1662) for sale. This is the full size 40 channel unit with carrying case. High/low TX power switch. Around 5 watts output on high. LCD display with TX and receive meters. Great shape. Original long (around 5 feet) center loaded antenna. Has external antenna, power and charging connections. Has an 5-pin external mic connection as well. Uses 8 'AA's or 10 'AA's rechargeables and you can recharge the batteries WITHOUT taking the batteries out. (Batteries and charger not included)

Asking only $ 40.00 plus shipping.

A Picture can be e-mailed.

Hi,
I have a Kenwood TS-440SAT 10M serial number, very good cosmetic and electrical condition, with VCO mods done in California.   Built in antenna tuner. Covers 0.3-30 Mhz continuous TX/RX.   With hand mic, power cable, owners manual, and radio. $600 + shipping

I also have a Heathkit Warrior Kilowatt linear amplifier.   Uses 4x 811A tubes. Output power
is between 500 and 700 watts. Covers 10/11/15/20/40/75/80 meter bands. Also works on 12/17/30 meter bands. Can be modified for 6 meter band too.   Very nice.   It's heavy -- so probably needs to go by fedex or UPS. $400+ shipping.

Will sell the package for $900. I'm a non-smoker so you wont get a radio that smells like an ashtray or has nicotine stains all over it.

Email if interested.
thanks,
Joe

This is an FCC "Fortfeiture Notice" and not a court case, nor does it demonstrate that the defendant actually paid the fine.

You are right. It isn't a court case. It isn't a court case because it didn't go to court. It didn't have to. The FCC has statutory authority to fine the operator. The operator can appeal, but what would be his appeal? The rule states that if you don't open your station to inspection, you have violated the rule and are subject to fine--period. So, what is to argue? If the guy should actually get an attorney to take it to a court to argue, he is going to lose. There is no way that he can explain away what he did. If he doesn't pay the fine, it gets sent over to the IRS and they begin to have their way with the violator by collecting a little for the rest of his life. The jerk will pay the fine, one way or another.

Look at the bottom
footnotes (No payment verification). Any government agency can fine anybody for anything.

What an idiot!

Dave amps do not suck they are just fine. The only problem here is service and selection.

It's rough in the amp building industry. especially when you can provide the customer with a great product. If you know the laws of "supply and demand" then you know whati am talking about. But when you see a decrease in the demand for the product you yourself are producing then you need to examine where you went wrong.

No need for bickering and nitpicking over who did this and who did that who cpied this who improved that. Just concetrate on your incoming, standing and outgoing orders. Especially the orders that have already left and have been delivered. That is the most important part of the business is the service after the sale.

So keep it real.
 827 White Cloud Chicago
Dont go playin on the tracks if you can't see the train a comin' because the cloud is rollin on.
X Force, the service and selection is always better!

> You are right. It isn't a court case. It isn't a court case because it didn't
> go to court. It didn't have to. The FCC has statutory authority to fine the
> operator. The operator can appeal, but what would be his appeal?

His appeal is based on a violation of search and siezure rights. In America, niether the FCC nor Almighty God can demand their way into anyones domilcile without a warrant. How many times do I have to type this?.................You guys are arguing about one of the most basic principles of an individuals constitutional rights. Ill say it again, CONSTITUTIONAL LAW 1st, ADMINISTRATIVE LAW 2nd. Civil rights always supercede administrative statutes..............My God, take your HAM hat off for a second and think about it.

>The rule
> states that if you don't open your station to inspection, you have violated the
> rule and are subject to fine--period.

Gary, you are not paying attention. We are not talking about being fined for refusing an inspection, we are talking about being fined for refusing an "Immediate" (on the spot) inspection. There is a huge difference between the two. The FCC clearly has the right to inspect a station however they do NOT have the right to enter anyones home to do so. The FCC inspection law as it is currently written will NOT hold water if anyone ever held their feet to the fire.....The biggest problem with this discussion is that most of you guys think that the Part 95 and Part 97 rules are the Holy Grail.

>So, what is to argue? If the guy should
> actually get an attorney to take it to a court to argue, he is going to lose.

Lose what, his Ham license? Or be forced to pay a fine if he's a non-ham? I dont think either (as long as he's not a moron). Let me ask you something Gary, when you are fined for something do you blindly take out your checkbook and pay or do you research the validity of the fine? If a cop told you that he caught you doing 10mph over that speed limit on his radar gun, do you put all of your faith in that electronic device to substantiate your guilt?

Its apparent that Mr. Hightower doesn't know how to read. Maybe its a lack
of education that's holding him back. Lets look at what he's now posting:

> I think Mr. Wildcat gets off on thinking his opinions are actual fact. He
> needs to spend more time researching his facts before he posts them as
such to
> the newsgroup. The following is an excerpt from an FCC publication Mr
Wildcat.
> If you have trouble with any of the words, please ask someone will
explain
> them to you.
>
> Q: Why must operators of radio frequency devices allow the FCC to inspect
their
> equipment?
>
> A: The Commission must ascertain essential facts pertaining to the
operation of
> a station which may be vital to the resolution of
> a number of questions, including interference problems involving public
safety.
> For this reason, the FCC must be able to check
> all covered equipment that have the potential to emit radio frequencies.
> Section 303(n) of the Communications Act gives the
> FCC this authority.

OK, Ill buy this one.

>
> Q: What happens if I do not allow the FCC agent to inspect my equipment?
>
> A: Failure to allow inspection forecloses the opportunity to resolve the
> problem. Thus, refusal to allow inspection is a serious
> challenge to the Commission's authority to inspect radio stations and is a
> violation of the Rules. Such a refusal may lead to
> revocation of a license, maximum monetary forfeiture, or other Commission
> sanctions.

This is where YOU really should learn the English language. Where in this statement does it say you will ACTUALLY be fined? I am reading the word "May", as in "may be fined". Mr. Hightower, did you ever hear of a law that did not have the penalty clearly written. There is no such thing as the word "MAY" is U.S. lawbooks. A person either breaks the law and faces a predetermined minimum punishment, or there is no punishment. What is the predetermined minimum punishment here? Is it $5.00 or $460,000? In your state, if you murder a person, is it completely up to the judge to determine the punishment for 1st degree murder or is there a minimum penalty in years? Cant you read?

If you could interpolate this Rule, which I realize how hard it must be for you, you would see that the actual penalty for breaking this rule is the foreclosing of further negotiations to resolve the fine with the FCC. It does not foreclose any right to argue your position in front of ANY legal body or panel. Like the many other Hams that have swooped into this newsgroup, you like to mentally add things between the lines of rules which are clearly written, thus allowing you all to make these far fetched assumptions.

If thats the word you like to use Outlaw that is fine, but again shows how off the shelf some of the FCC laws really are, a law enforcement officer that goes around catching rapist,drug dealers ,mobsters,scam artist, murderers, child pornographers , pedophiles, these are the real criminals that need attention not someone talking on a cb radio with 1000 watts, I guess if you ever drive over the speed limit which I am sure you do /done I guess we'll call you a Outlaw driver

Yes I am wondering myself how many people he has actually charged $500 . Hmm
lets find out

AB7RS,

Show me ONE manufacturer who quotes line losses in coaxial feedline relative to antenna system standing wave ratio!

You won't find any, because feedline loss in and of itself is NOT a function of SWR.........

Good luck....
Jack

Dear
Wildcat...................................................................
............................
This is best played to the tune of any stupid ass rap
beat................................
You ain't no friggin' poet, and now we ALL know it. The whitesnake is your God
(yeah; we know you blow it), got no eddication and man you surely show it!
--------------------------------------------------------------------------
---------------------TollFree's your boy, your little sex-toy, you act like a
man, but we know  it's just a ploy. Ain't nuttin' but a wussy, a fuzzy little
pussy, a stone-cold, kitty kat,
taut-i-taw-a-putty-tat.---------------------------------------------------
------------------- Try to shoot the DX, get some power out...when Grandma
there out-talks you, all you do is pout...You talked about some Amateurs, tried
to give 'em a black eye; why not just take your hand from outta TollFree's
fly??------------------------ You really want to get out, you want to talk some
skip? Talk to Africa, Zimbabwe or Canada you
dip!----------------------------------------------------------- Gotta learn
your code, gotta pound that key, cuz nothin in this great big world is gonna
come for free...except that little welfare check, but THAT you get from me!

I have a brand new in the un-opened box a Grant XL SSB CB radio $100.00
plus the shipping . I also have a NOS made in Malaysia Cobra 148 GTL SSB
CB radio still in the un-opened box for $110.00 plus the shipping.
Thanks for looking.
Alan.

quoted line losses are at a perfect 1:1 SWR,the loss goes up drastically from there,especially with coax and that is one reason so many people use ladder line.

Can I use non-matched, matched pairs, or must I use matched quads as
replacement pills to fix my error? Also what will the performance be like
compaired to each other? As for cars... my dead pontiac blew the trans I drove
it for aslong as I could but It was not dependible and and wasn't worth fixing
to much rust in and the engine needs work. my mothers tourus is on the 3rd trans
and needs another, my F250 is rusting rather well also it needs a front end
rebuild and a new ?computer? the fuel pumps don't turn on unless you jump the
positive lead on the battery to the ECC relay socket, a friends ford probe has a
bad engine he had the heads replaced now 15000 miles later the same problem. I
used to be a diehard bieliver American automobiles (I am still to a point) but I
havent had a lot of luck, nothing would make me happier then driving to school
and work in my big 4x4 F-250 but I don't have the time or the money to fix them
nor the money to pay for the gas... I drive well over 150 miles a day to work
and school and for the money this was the best deal.

p.s. My dream truck is a late 40's early 50's full bodied dodge power wagon...
imho you can't get more American than that.

AB7RS,

  People who use ladder line usually
have a load impedance that they're
trying to match somewhere in the area
of 300 - 450, maybe even 600 ohms....

AB7RS, Tracey

I fail to see how this is going
to help the individual asking the
original question since the antenna
that he referred to is designed to
use 50 ohm coaxial cable, unless you
happen to know where we can get some
50 ohm ladder line?

The question is rhetorical.....
We are talking about coaxial
type cable here, right?

am running around 200ft of belden 213 coax from a jo-gunn 3 x 3
star.have followed the instructions to set swr. instructions say to tune
on ground with radial at least 1 ft. off the ground. my radials are
about 6 ft off the ground. it says to use a wooden mast, i did that.
have moved the metal stap up and down but don't seem to be getting any
results. must admit the highest reading i have had is 1.7. i'm suppose
to go approximately 20 channels down from my mid point and set swr flat,
then when i put it on the tower they are suppose to be flat at my mid
point. so far i am having terrible luck on the ground, could someone
advise. moving the metal strap changes thing very minimal if any at all,
thanks jerry.

I've read most of the posts about the FCC's ability/inability to enter w/o a search warrant and the question comes to mind...Are there that many of you out there making such a pain in the ass of yourselves to the cable companies, public safety and neighbors in general that you even need to worry about this question??

In my limited past knowledge of the FCC's actions, I recall they generally bring a Marshall and/or local cops with them who most likely will be carrying a warrant to search the premises for radio gear. I also recall the warrant needs to be read carefully by the intended searchee because these warrants are sometimes not overly specific and could lead to other problems should something else be noticed.

One other thing I know comes to mind and that is the primary operator of the station needs to be there during the search unless someone in the household foolishly lets them in when the primary op isn't there. Also the Feds can only show up during normal hours...unless you happen to be operating at 3 am. This then is considered normal because the station is in use.

Personally, if I were running that much power to be noticed I would move my heavy equipment to a different room and remote control it or maybe have a second legit station setup elsewhere to show anyone that surprises you.

Of course this would be a moot point in some cases because the FCC will probably already have a good idea of how much you're running by the time they get to your door.

I guess the only real answer to keeping the Feds off your case is (1) don't do anything illegal or (2) if you must do it illegally, don't create problems in the "hood" so you won't be noticeable.

Jerry,

First of all, I don't know what you're using to measure swr, but make sure that you are using the least amount of power necessary to provide meter calibration for the swr meter and no more.

I believe that the jo-gunn 3x3 star is a "beam" antenna. (correct me if I am wrong here) Set the beam "on its back", pointing straigt up into the air in an area that is clear of all metal objects for at least 37 feet in all directions. At 200 feet of RG213 the loss will be in the area of approximately 1.5 db., with a good quality cable design, but let's forget all of this for the moment. After implementing all of the above criteria, retake your measurements and let me know what happens.

Jack

    Well you could spray some downy liquid on your carpets and this
should reduce or eliminate the static on your body. If this doesn't
sound good than you can hit a local industrial electronics place for
some commercial carpet/tile floor anti static liquids and these will
work too.Just a bit more expensive.

I heard a story from a truck driver recently.  It seems that some IDIOT was
being an IDIOT on CH. 19 with big power in Cal. recently.  A driver saw the
```

danger comming & tried to warn other people of the DANGER ahead, and could NOT get through because of the MORON keying down acting like an idiot uselessly. Because someone couldn't get through, an accident happened & the driver was asked WHY he didn't warn others about it. He told the BEAR that HE DID, but the MORON on the CB covered him up so no one could hear him warn others. The Bear did understand, because he hears the MORON too. They ought to accuse him of MURDER !!!!   I guess he's going to answer at the Judgment if not sooner!!!!   Dave

Hey Wildcat: Perhaps YOU should get back to US when you have read AND
UNDERSTOOD it.

On the other hand, don't bother, displaying your complete ignorance of
our legal system serves to underscore the worthlessness of the trash
you post.

>Article I says that only Congress has the power to make laws. Congress
>cannot give these powers to any other body. Through the years, however,
>Congress has created various federal agencies to make regulations and put
>its policies into practice. Such agencies include the Federal Trade
>Commission, the Federal Power Commission, and the Commission on Civil
>Rights.

Fortunately, YOU do not decide what Congressional acts are
constitutional are what Congressional acts are not. That authority
rests with the courts:

```
>                    Article III
>
>                    The judicial branch
>
>Section 1. The judicial power of the United States, shall be vested in one
>Supreme Court, and in such inferior courts as the Congress may from time to
>time ordain and establish.  The judges, both of the Supreme and inferior
>courts, shall hold their offices during good behavior, and shall, at stated
>times, receive for their services, a compensation, which shall not be
>diminished during their continuance in office.
>
>Section 2 (1).  The judicial power shall extend to all cases, in law and
>equity, arising under this Constitution, the laws of the United States, and
>treaties made, or which shall be made, under their authority;--to all cases
>affecting ambassadors, other public ministers and consuls;--to all cases of
>admiralty and maritime jurisdiction;--to controversies to which the United
>States shall be a party;--to controversies between two or more states;
```

>[between a state and citizens of another state;] between citizens of
>different states;--between citizens of the same state claiming lands under
>grants of different states, and between a state, or the citizens thereof,
>and foreign states, [citizens or subjects].

NOTE that the above gives judicial power extending "to all cases, in law and equity, arising under this Constitution," to the COURTS, and NOT to outhouse lawyers such as yourself.

The Supreme Court has upheld the acts of Congress creating various federal agencies as being constitutional in that they create a mechanism through which Congress exercises its constitutional authority. Your opinions to the contrary don't mean diddly squat, because it's not up to you to decide the matter, it is up to the Supreme Court to decide the matter...and the court has already done just that! YOUR interpretation of the law doesn't matter...it is the interpretation of the courts that matters.

>   Powers granted to Congress
>
>The Congress shall have power:
>
>Section 8 (1): To lay and collect taxes, duties, imposts and excises, to pay
>the debts and provide for the common defense and general welfare of the
>United States; but all duties, imposts and excises shall be uniform
>throughout the United States;

NOTE that the term "general welfare of the United States" does NOT refer to public assistance programs. In fact, no such programs existed at the time the Constitution was written. The term "general welfare of the United States" has an entirely different meaning here. More on this later.

>
>Section 8 (2): To borrow money on the credit of the United States;
>
>Section 8 (3): To regulate commerce with foreign nations, and among the
>several states, and with the Indian tribes;
>
>Notes: This section, called the commerce clause, gives Congress some of its
>most important powers. The Supreme Court has interpreted commerce to mean
>not only trade but also all kinds of commercial activity. Commerce "among
>the several states" is usually called interstate commerce. The Supreme
>Court has ruled that interstate commerce includes not only transactions
>across state boundaries but also any activity that affects commerce in more
>than one state. The court has interpreted the word regulate to mean
>encourage, promote, protect, prohibit, or restrain. As a result, Congress
>can pass laws and provide funds to improve waterways, to enforce air safety
>measures, and to forbid interstate shipment of certain goods. It can
>regulate the movement of people, of trains, of stocks and bonds, and even of
>television signals. Congress has made it a federal crime to flee across
>state lines from state or local police. It also has forbidden people who
>operate interstate facilities or who serve interstate passengers to treat

>customers unfairly because of race.

Didn't you even read the stuff that you yourself posted before you posted it? Agencies such as the Federal Trade Commission, Federal Power Commission, and Commission on Civil Rights *are* constitutional, because they provide the mechanism through which Congress exercises its constitutional authority over activities that affect commerce in more than one state - as the courts have ruled on numerous occasions. Your reading comprehensive scores in high school must have set record lows that are still on the books today - if you even got as far as high school, that is.

>Section 8 (4): To establish an uniform rule of naturalization, and uniform

>
>Notes: This section is known as the "necessary and proper" clause or the
>elastic clause. It allows Congress to deal with many matters that are not
>specifically mentioned in the Constitution but are suggested by powers
>granted to Congress in Article I. As times have changed, Congress has been
>able to pass needed laws with few amendments to the Constitution. This
>flexibility helps explain why the Constitution is one of the oldest written
>constitutions.

Ah, yes, the powers granted in Article I. Let's review them, shall we?

>Section 8 (1): To lay and collect taxes, duties, imposts and excises, to pay
>the debts and provide for the common defense and general welfare of the
>United States; but all duties, imposts and excises shall be uniform
>throughout the United States;

Now we get back to that clause concerning the power of Congress to provide for the general welfare of the United States...which Section 8(18) specifically grants Congress the authority to make all laws necessary to execute that power.

The question here, then, insofar as our discussion of the FCC is concerned, is whether or not Congress has the power to make laws governing the use of a natural resource (the RF spectrum) and create a federal agency to provide the mechanism through which Congress exercises its constitutional authority to regulate same.

The Federal courts have already decided this matter.

In short, mister outhouse lawyer, once you find yourself standing in front of a federal judge, the court WOULD NOT EVEN PERMIT YOU TO RAISE THE ISSUE OF CONSTITUTIONALITY OF THE REGULATIONS IN QUESTION !!!

I remind you of some other constitutional provisions previously quoted:

>Section 8 (9): To constitute tribunals inferior to the Supreme Court;
>

>Notes: Examples of federal courts "inferior to the Supreme Court" include
>the U.S. district courts and the U.S. courts of appeals.

The Constitution grants Congress the authority to create the Federal District Courts.

> Article III
>
> The judicial branch
>
>Section 1. The judicial power of the United States, shall be vested in one
>Supreme Court, and in such inferior courts as the Congress may from time to
>time ordain and establish. The judges, both of the Supreme and inferior
>courts, shall hold their offices during good behavior, and shall, at stated
>times, receive for their services, a compensation, which shall not be
>diminished during their continuance in office.

The Constitution vests the judicial power in the United States in those Federal District Courts just as it does in the Supreme Court.

What you don't seem to realize, mister outhouse lawyer, is that the legal system in this country is not predicated on what is written in the law, but rather on how the courts INTERPRET what is written in the law. This is what is known as CASE LAW and case law sets the precedents by which subsequent interpretations of the law are made by the courts. In this instance, there is already sufficient case law that your arguments about the constitutionality of FCC's authority to make and enforce its regulations would get you absolutely nowhere.

If you had bothered to read any of the material on the world wide web to which I posted links a couple of days ago (which I did for the specific purpose of allowing persons such as yourself to rise above the state of ignorance in which you are currently mired), you would have found at http://www.fcc.gov/cib/dunifer.html the ruling of the U.S. District Court For The Northern District Of California in the case of U.S. vs. Stephen Paul Dunifer in which the court cited numerous instances of case law where courts have concluded that defendants must have standing in order to claim an affirmative defense requiring the litigation of issues not encompassed in the plaintiff's case-in-chief. On that basis, the court denied Dunifer's standing to raise an affirmative defense based on the constitutionality of FCC licensing regulations.

See e.g. Meredith Corp. v. FCC, 809 F.2d 363, 872, 874 (D.C. Cir. 1987)(holding that FCC was required to respond to plaintiff's constitutional arguments and remanding case to FCC to consider the constitutionality of FCC's fairness doctrine on its face and as applied to plaintiff); WAIT Radio v. FCC, 418 F.2d 1153, 1156 (D.C. Cir. 1969)(remanding FCC's denial of an applicant's waiver request to FCC to reconsider the First Amendment issue raised therein).

See National Broadcasting Co. v. United States, 319 U.S. l90, 227 (1943)("The right of free speech does not include, however, the right to use the facilities of radio without a license. The licensing system established by Congress in the Communications Act of 1934 was a proper exercise of its power over commerce.);

Red Lion Broadcasting v. FCC, 395 U.S. 367, 389 (1969); See also, Action for Children's Television v. FCC, 59 F.3d 1249, 1260, 1262 (D.C. Cir. 1995), cert. denied, 516 U.S. 1072(1996)(statutory scheme authorizing the FCC to enforce forfeitures is constitutional on its face, does not lack appropriate safeguards and was not unconstitutional as applied).

The Ninth Circuit Court Of Appeals has, in at least two cases, analyzed whether defendants have standing to raise, as an affirmative defense, the unconstitutionality of the statute and regulations that form the basis of the government's case-in-chief. See United States v. Hugs, 109 F.3d 1375, 1378 (9th Cir. 1997); United States v. Thirty Eight (38) Golden Eagles, 649 F. Supp. 269, 274, 276 (D. Nev. 1986), aff'd, 829 F.2d 41

The case law cited above came from the opinion of the Federal District Court judge in the Dunifer case. Had you bothered to follow the links I posted a few days ago, one of them was a link to this specific opinion containing these specific references to case law which clearly show that you don't know what you're talking about. The FACTS clearly show that regardless of your uninformed assertions to the contrary, the courts have indeed ruled that the FCC does indeed have the authority to enact and enforce its regulations.

Now, I hope for the sake of the other people reading this NG that anyone who thinks they might at some point be affected by FCC enforcement of its regulations will take the time to find out the truth for themselves, instead of listening to slef-proclaimed experts on the law such as yourself...because it is obvious to me that you don't know half of what you ought to have known about this subject before you started shooting your mouth off about it, and anyone who accepts your highly misinformed assertions about the laws that apply to this issue is in for a very rude awakening should they ever find themselves standing in front of a federal judge and a U.S. Attorney.

Bottom line...don't attempt to interpret or apply ANY provisions of law yourself unless you are properly educated and are licensed to practice law! If you do not meet those requirements, then don't endanger yourself by listening to the likes of Wildcat - consult a REAL legal professional !

Usually for a fine ($$$) collection enforcement action because if its
after a raid then you will know the Miranda by heart. Raids are only
used to get attention of hardheads who don't get the $FINE$ message.

John, we all know that the FCC inspects radio stations, CFR 47 says so but the constitutional arguements are going nowhere on this thread. I have been INSPECTED and the bottom line is:

The inspection law is directory and not mandatory (Legalese for saying that you should do it but its not criminal if you don't), however the FCC may fine you for "Lack of Candor" should you not permit an inspection (deal with the fine at the federal courthouse before the federal judge at collection time).

So only a warrant can force an inspection, a fine is the stick the FCC uses on the first go around to get cooperation. It si wise to pernmit the inspection because Mr. FCC will bring back his federal poker playing buddies with the desired warrant.

     Yes, buy an amplifier.

     There are tuning tricks that will increase the radio's
     power, but the before/after difference won't be very
     significant.  Also, anytime you increase the output of
     a device you decrease its reliability to one degree or
     another.

Why argue with Bob?

The center and ground are a DC short - meaning there is NO resistance -
O Ohms.
RF doesn't "see" this short, it sees around 50 Ohms worth of radiation
resistance on 27 Mhz (something you can't measure with your Ohm meter).

So, anyway, Debby or Dave, no need to freak cause you think your
antenna is shorted out, its not (to RF).

Stay off the crack,

Bob.

Right, you're wrong. If a cop with a search warrant is at your door and you refuse, he just forces entry. If an FCC Agent *without* a warrant is at your door and you refuse, he can't force entry. He can however go back to the office and make you wish (legally) that you had let him in.

For example, if the regular cops had had a search warrant for the K1MAN house, and no one answered the door, they would simply have broken in. The FCC, when they got no answer, had to go back to the office and start a letter writing campaign...

Want to buy older 2kw HF amplifier at a reasonable price. Looking for
something like SB220 or Thunderbolt. Must be clean and have 10m.
Please reply directly to my email at blueglow@mindspring.com.

Thanks,
Blueglow

In Arizona, the speed law (28-701A) is a reasonable and prudent law. Speed limit signs are but a guide and are not absolute. The officer must prove that your speed was not reasonable and prudent for a conviction. 20 mph over might be reasonable at 2 am when there is no traffic, and 20 under might be unreasonable in a dust storm...

Sounds good to me.  Georgia has a too fast for conditions law which is
written in a similar way.  I have always instructed my students to start at
15 mph over the posted limit.  This allows for the plus or minus 1 mph
variance on the RADAR and also takes into account a plus or minus 5 mph on
the speedometer.  Very few motorists will argue that they weren't speeding
if the officer gives this 15 mph.  (school zones excluded, of course)

I don't doubt for a minute that you were cited, Rick. I have a problem with officers citing for under 6 mph over, and this is why. Typically a speedometer can be off by as much as 5 mph and still considered to be accurate. The RADAR itself has a variance of plus or minus 1 mph. Using this logic, in order to be perfectly fair, an officer should not write a ticket for less than 6 mph over. I teach my students to start at 15 mph over.

Who said cops were fair? They have a crappy job enforcing lots of stupid
laws written by old women. The stress usually gets to them and they crack,
the shell of humanity drops away and another perfect asshole is hatched.

Jim

The unit I was familiar with was the Custom Signals HR-8. It was one of the first handheld units in the 70's. If it was reading several cars on the same road, it would often lock on the fastest and/or largest vehicle, and not necessarily the closest. (It had about a one mile range.) For example, if a motorcycle was 2 blocks away going 35 mph and a large truck was 4 blocks away going 50 mph, it would likely lock on the truck. If the officer was poorly trained the MC rider got a bad ticket for 50mph. At that time the officer was required to give a visual estimate as well as the radar reading in court, which was supposed to eliminate the possibility of this error. I still think some bad tickets were written though. The bottom line was that the accuracy of the radar unit was secondary to the officers training...

right and like i said before, do not open the door and do not let them see
you and for goodness sakes go back in the radio room and disconnect all that
stuff and put it in the closet......icm, out..........

  I fail to see how buying a new radio
is going to solve your problem!  The
antenna system (or lack of one) is your
problem.  Correct the antenna problem
and save your money!  BTW, Wilson makes
a great new "no ground" antenna which
just might solve your dilemma!

Hi Dave,
I have found a 2950 tuned properly will out due just about any other radio
and sound better doing it. I install a tone switch on them after the radio
is alined properly Use RCI spec for alinement and you will get good results
and be happy. 73s Oldtimer

How much power can such an engine produce? It takes about
200kw to run a 100kw box. The engine better have more than
200kw capacity.

You know that. *I* know that. However, I think there are a lot of people out there who *don't* know that...and then we have outhouse lawyers like Wildcat who don't know from shinola telling people they can defy an FCC request to inspect their stations and get away with it scot free by waving the Constitution in their faces, and that is just plain NOT the case.

Furthermore, each person who becomes informed of the facts as a result of reading this discussion and is thus encouraged to operate legally in order to avoid getting slapped with a NAL, represents one less person out there screwing up the band for everybody else. The aim here is the same as that of the FCC - namely, compliance with the applicable regulations.

73 and good DX'ing,
John D. Kasupski

But in response. Like I said. You can be written a ticket by GSP for 56 in a 55. I'm not saying it's going to happen or that you will even get convicted for it, I'm saying you can get a ticket for 56 in a 55 by GSP. Isn't that correct? You do sound like the authority. So I'm taking advantage of the situation and asking you. I was 99% sure that I was

correct about this situation. I am under the impression GSP can write you a
ticket for violating any law to any degree. If not, then going 56 in a 55
is at least P.C. (probable cause) to pull you over, and find some dope in
the car :)

Years ago, when I was 19, I got a ticket from GSP. The ticket said 63 in a
55. Granted, it was dismissed in court, I still got the citation from the
officer!

I have one of the first HR-2510 built and it's been in the closet for
the past 7 years. I took it out of the closet last week and the sound
is really bad. I even hooked it up to an external speaker, but it
still sound like the speaker is broken. Does anyone have any idea what
could be wrong with it?

: >long out lived it's usefullness.

I doubt if anyone is locked out of learning the code at 5 wpm. You can
receive almost that fast after you memorize the code. People who are
5 years old have managed - deaf people have managed - blind people have
managed. I doubt if you have any less ability along that line than
some of them. It might take a year of 30 minutes practice per day, but
that would be rare. Many manage by taking a class from an Amateur Radiio
Club - and pass the code within a month.

: My point is this, Jeff...you want a no-code band on HF. There already
: is a no-code band on HF. And it is a MESS because of operators who do
: not operate according to the rules for that band. By that, I mean the
: CB rules, not ham rules.

Yep. And a lot of the CBers that disobey the CB regulations are Hams.
I have known several. They don't use noise toys, power mikes or trash
linears - but they use Ham gear, usually run at full output - often
out of band or between channels.

: The reason that enforcement is stricter on the ham bands, Jeff, is
: that the ARS is largely self-policing. If someone got onto a ham
: frequency and pulled the kind of crap I hear on The Bowl every night,
: there would be a fox hunt with several amateurs locating the offending
: parties and they would then receive a letter from an ARRL Official
: Observer requesting that they knock off the B.S.

And often nothing happens. The OO can only make a request - they have
no enforcement powers. Witness the trash on some of the Ham frequencies
that is as bad, or worse, than what you hear on the CB channels.

: If that wasn't sufficient to put a stop to the nonsense, the next step
: is a formal complaint to the FCC, with possible loss of license,
: confiscation of equipment, and fines.

See above.

The Yaesu's have a noise blanker - at least, all those I have seen.

The one in the FT-101E/EX/EE is pretty poor. The one in the FT-101ZD is rather good - as is the one in the FT-757GX.

The Kenwood noise blanker seems to be fairly good, but not great.

>I don't doubt for a minute that you were cited, Rick. I have a problem with officers citing for under 6 mph over, and this is why. Typically a speedometer can be off by as much as 5 mph and still considered to be accurate. The RADAR itself has a variance of plus or minus 1 mph. Using this logic, in order to be perfectly fair, an officer should not write a ticket for less than 6 mph over. I teach my students to start at 15 mph over.

Can we convince you to come teach in Michigan? :-)

Actually, I think the 4 MPH over the limit was the most minor part of the reason for the ticket. I went for almost 40 years of driving without _ever_ receiving a ticket (not that I never _deserved_ one, but I never _received_ one). Then I bought a new car. Two years. Two tickets (one for 4 MPH over, one for a "rolling stop").

Always bought a gray, white, or bronze car before. Not this time.

The car is "arrest me" red.

<sniff>

Rick

I think the obvious problem with this debate is that apples and oranges are being argued.

A LEO with a warrant can enter a home to search for evidence of a crime _without_ either the permission of the owner OR any proof that the owner had the evidence on the premises (assuming s/he can convince a judge that probably cause to believe the evidence is present does exist). Thus if someone is suspected of committing a homicide, his/her home can be searched for the murder weapon without any proof that the weapon has _ever_ been on the premises.

An FCC official, on the other hand, cannot demand that the station equipment be made available for inspection unless s/he can prove that illegal activities occurred at that location. In other words, an FCC official can view an antenna connected to a building, have reports in his/her hand by other users of the frequency that specific offenses had occurred, but still not demand access to the equipment unless s/he actually detects a radio transmission originating from the location _at the time._

These are _not_ equivalent situations. In the first case, the existence of the evidence is pure conjecture based on the facts of the crime; in the second case, the transmission could _not_ have occurred unless the equipment (evidence) was on that site and in use at the time.

Thus the correct comparison is not to a LEO with a search warrant, it is to a LEO who witnesses a crime being committed in which immediate action is necessary in order to preserve the evidence trail. In such a case, a warrant is not required for entry.

In the case of the FCC, because they lack the legal status of Law Enforcement Officers, they cannot force entry to prevent the destruction of evidence (i.e., removal of the illegal equipment). But having evidence of the commission of the offense, if the resident refuses them permission to inspect the equipment (and thus to confirm that it is _not_ illegal which would end the matter immediately), the burden of proof immediately falls to the resident to demonstrate a compelling reason why the station could NOT be inspected.

The comparison would be far more accurate if made to the right of a LEO to require a test for intoxication when s/he observes a motorist driving in an erratic and apparently intoxicated manner. Most states have laws that require the suspension of the driver's license of any driver who refuses such a test since one condition of driving on the roads of the state is that the driver provides tacit agreement to submit to such a test.

Hey Hightower, here's some basic reading for you which shouldn't shatter your brain....I hope.

>Copied from: "The Constitution of The United States of America"<

Amendment 4: Search and Arrest warrants

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

I think that just about says it all.............dont you?

A man goes to the doctors and says, "Doctor, I've got this problem you see, only you've got to promise not to laugh."

The doctor replies, "Of course I won't laugh! That would be thoroughly unprofessional. In over twenty years of being a doctor I've never laughed at a patient."

"OK then," says the man, and he drops his trousers.

The doctor is greeted by the sight of the tiniest penis he has ever seen in his life. Despite his best efforts, he begins laughing, softly at first, then uncontrollably. Several minutes later he manages to compose himself and wipes the tears from his eyes. "I'm so sorry," he says to the patient, "I don't know what came over me, I won't let it happen again. Now what seems to be the problem?"

The man says, "It's swollen."

A retired gentlemen went into the social security office to apply for Social Security.

After waiting in line a long time he got to the counter.� The woman behind the counter asked him for his drivers license to verify his age. He looked in his pockets and realized he had left his wallet at home.� He told the woman that he was very sorry but he seemed to have left his wallet at home.

"Will I have to go home and come back now?" he asks.

The woman says, "Unbutton your shirt."

So he opens his shirt revealing lots of curly silver hair.� She says, "That silver hair on your chest is proof enough for me," and she processed his Social Security application.

When he gets home, the man excitedly tells his wife about his experience at the Social Security office.� She said, "You should have dropped your pants, you might have qualified for disability, too."

Subject: Blonde Goes Ice Fishing

A blonde wanted to go ice fishing.� She'd seen many books on the
subject, and finally, after getting all the necessary tools together,
she made for the nearest frozen lake.
```

After positioning her comfy footstool, she started to make a circular cut in the ice.� Suddenly---from the sky---a voice boomed,

"THERE ARE NO FISH UNDER THE ICE!"

Startled, the blonde moved further down the ice, poured a Thermos of cappuccino, and began to cut yet another hole.� Again, from the heavens, the voice bellowed,

"THERE ARE NO FISH UNDER THE ICE!"

The blonde, now quite worried, moved way down to the opposite end of the ice, set up her stool, and tried again to cut her hole.� The voice came once more, even louder:

"THERE ARE NO FISH UNDER THE ICE!"

She stopped, looked skyward, and said, "Is that you Lord?"� The voice replied,

"NO, THIS IS THE ICE RINK MANAGER!"

Hey Hightower: When you get through with the 4th Amendment, work on the whole enchilada. Get back to me once you've read it.

CONSTITUTION OF THE UNITED STATES/The Constitution

Preamble

We the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

Article I

The legislative branch

Section 1. All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

Notes: The first three articles of the Constitution divide the powers of the United States government among three separate branches: (1) the legislative branch, represented by Congress; (2) the executive branch, represented by the President; and (3) the judicial branch, represented by the Supreme Court. This division, called the separation of powers, is designed to prevent any branch of the government from becoming too powerful.

Article I says that only Congress has the power to make laws. Congress cannot give these powers to any other body. Through the years, however, Congress has created various federal agencies to make regulations and put its policies into practice. Such agencies include the Federal Trade Commission, the Federal Power Commission, and the Commission on Civil Rights.

The two-house Congress was one of the most important compromises of the Constitutional Convention. The small states at the convention supported the New Jersey plan, under which each state would have had the same number of representatives. The large states at the convention wanted the Virginia plan, which provided representation based on population. As a compromise, one house was chosen according to each plan.

The House of Representatives

Section 2 (1). The House of Representatives shall be composed of members chosen every second year by the people of the several states, and the electors in each state shall have the qualifications requisite for electors of the most numerous branch of the state legislature.

Notes: Members of the House of Representatives are elected to two-year terms. If a person is eligible to vote for the "most numerous branch" of his or her state legislature, he or she is also eligible to vote for members of Congress. The "most numerous branch" is the house that has the most members. All states except Nebraska have a two-house state legislature. The question of who can vote for state legislators is entirely up to the state, subject to the restrictions of the Constitution and federal law. The 15th, 19th, 24th, and 26th amendments forbid the states to deny or restrict a citizen's right to vote because of race, sex, or failure to pay a tax; or age if the person is at least 18 years old.

Section 2 (2). No person shall be a representative who shall not have attained to the age of twenty-five years, and been seven years a citizen of the United States, and who shall not, when elected, be an inhabitant of that state in which he shall be chosen.

Notes: Each state decides for itself the requirements for legal residence, subject to constitutional limits. Most representatives live not only in the state but also in the district from which they are chosen.

Section 2 (3). Representatives and direct taxes shall be apportioned among the several states which may be included within this Union, according to their respective numbers, [which shall be determined by adding to the whole number of free persons, including those bound to service for a term of years, and excluding Indians not taxed, three-fifths of all other persons]. The actual enumeration shall be made within three years after the first meeting of the Congress of the United States, and within every subsequent term of ten years, in such manner as they shall by law direct. The number of representatives shall not exceed one for every thirty thousand, but each state shall have at least one representative; [and until such enumeration shall be made, the state of New Hampshire shall be entitled to choose 3, Massachusetts 8, Rhode Island and Providence Plantations 1, Connecticut 5, New York 6, New Jersey 4, Pennsylvania 8, Delaware 1, Maryland 6, Virginia 10, North Carolina 5, South Carolina 5, and Georgia 3].

Notes: The effect of this paragraph has been greatly changed, both by amendments and by new conditions. It now provides only three things: (1) the number of representatives given to each state shall be based on its population; (2) Congress must see that the people of the United States are counted every 10 years; and (3) each state gets at least one representative.

The Founding Fathers probably considered the words "and direct taxes" to apply to poll and property taxes. The 16th Amendment gives Congress the right to tax a person according to the size of his or her income, rather than to tax a person according to the population of the state in which the person happens to live.

In the reference to "three-fifths of all other persons," the "other persons" meant black slaves. Since there are no longer any slaves, this part of the paragraph no longer has any meaning.

The average House district has well over half a million people, so the requirement that there shall be no more than one representative for every 30,000 people no longer has any practical force. In 1929, Congress fixed the total number of representatives at 435.

Section 2 (4). When vacancies happen in the representation from any state, the executive authority thereof shall issue writs of election to fill such vacancies.

Notes: If a vacancy occurs in a House seat, the state governor must call a special election to fill it. However, if the next regularly scheduled election is to be held soon, the governor may allow the seat to remain empty rather than call a special election.

Section 2 (5). The House of Representatives shall choose their Speaker and other officers; and shall have the sole power of impeachment.

Notes: The House chooses an officer called the Speaker to lead meetings (see SPEAKER). The House alone has the power to bring impeachment charges against an official. The Senate tries impeachment cases. See IMPEACHMENT.

The Senate

Section 3 (1). The Senate of the United States shall be composed of two senators from each state, [chosen by the legislature thereof,] for six years; and each senator shall have one vote.

Notes: The Constitution at first provided that each state legislature should pick two senators. The 17th Amendment changed this rule by allowing the voters of each state to choose their own senators.

Section 3 (2). Immediately after they shall be assembled in consequence of the first election, they shall be divided as equally as may be into three classes. The seats of the senators of the first class shall be vacated at the expiration of the second year, of the second class at the expiration of the fourth year, and of the third class at the expiration of the sixth year, so that one-third may be chosen every second year; [and if vacancies happen by resignation, or otherwise, during the recess of the legislature of any state, the executive thereof may make temporary appointments until the next meeting of the legislature, which shall then fill such vacancies].

Notes: Senators are elected to six-year terms. Every two years, one-third of the senators are elected and two-thirds are holdovers. This arrangement makes the Senate a continuing body, unlike the House, whose entire membership is elected every two years. The 17th Amendment changed the method of filling vacancies. The governor chooses a senator until the people elect one.

Section 3 (3). No person shall be a senator who shall not have attained to the age of thirty years, and been nine years a citizen of the United States, and who shall not, when elected, be an inhabitant of that state for which he shall be chosen.

Notes: In 1806, Henry Clay of Kentucky was appointed to fill an unexpired term in the Senate. He was only 29, a few months younger than the minimum age, but no one challenged the appointment. In 1793, Albert Gallatin was elected to the Senate from Pennsylvania. He was removed from office when the Senate ruled that he had not yet been a citizen for nine years.

Section 3 (4). The Vice President of the United States shall be president of the Senate, but shall have no vote, unless they be equally divided.

Notes: The Vice President serves as president of the Senate, but votes only when a tie vote occurs. The Vice President's power to break ties can be important. In 1789, for example, Vice President John Adams cast the vote that decided the President could remove Cabinet members without Senate approval.

Section 3 (5). The Senate shall choose their other officers, and also a president pro tempore, in the absence of the Vice President, or when he shall exercise the office of President of the United States.

Notes: The Senate elects an officer called the president pro tempore to lead meetings when the Vice President is absent.

Section 3 (6). The Senate shall have the sole power to try all impeachments. When sitting for that purpose, they shall be on oath or affirmation. When the President of the United States is tried, the Chief Justice shall preside: and no person shall be convicted without the concurrence of two-thirds of the members present.

Notes: The provision that the Chief Justice, rather than the Vice President, shall preside over the Senate when a President is on trial probably grows out of the fact that a conviction would make the Vice President the President. The phrase "on oath or affirmation" means that senators are placed under oath when trying impeachment cases, just as jurors are in a regular court trial.

Section 3 (7). Judgment in cases of impeachment shall not extend further than to removal from office, and disqualification to hold and enjoy any office of honor, trust or profit under the United States: but the party convicted shall nevertheless be liable and subject to indictment, trial, judgment and punishment, according to law.

Notes: If an impeached person is found guilty, he or she can be removed from office and forbidden to hold federal office again. The Senate cannot impose any other punishment, but the person may also be tried in regular courts. The Senate has convicted only five people, all of them judges. These men were removed from office, but none was tried in another court.

Organization of Congress

Section 4 (1). The times, places and manner of holding elections for senators and representatives, shall be prescribed in each state by the legislature thereof; but the Congress may at any time by law make or alter such regulations, [except as to the places of choosing senators].

Notes: As long as state legislatures chose the senators, it would not do to let Congress fix the place of choosing. This would have amounted to giving Congress the power to tell each state where to locate its capital. The words of the Constitution "except as to the places of choosing senators" were set aside by the 17th Amendment.

Section 4 (2). The Congress shall assemble at least once in every year, [and such meeting shall be on the first Monday in December,] unless they shall by law appoint a different day.

Notes: In Europe, monarchs could keep parliaments from meeting, sometimes for many years, simply by not calling them together. This is the reason for the requirement that the Congress of the United States must meet at least once a year. The 20th Amendment changed the date of the opening day of the session to January 3, unless Congress sets another date by law.

Section 5 (1). Each house shall be the judge of the elections, returns and qualifications of its own members, and a majority of each shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may be authorized to compel the attendance of absent members, in such manner, and under such penalties as each house may provide.

Notes: Each house determines if its members are legally qualified and have been elected fairly. In judging the qualifications of its members, each house may consider only the age, citizenship, and residence requirements set forth in the Constitution. In acting on motions to expel a member, however, either house of Congress may consider other matters bearing on that member's fitness for office. A quorum is a group large enough to carry on business. Discussion and debate can go on whether a quorum is present or not, as long as a quorum comes in to vote.

Section 5 (2). Each house may determine the rules of its proceedings, punish its members for disorderly behavior, and, with the concurrence of two-thirds, expel a member.

Notes: Either house can expel one of its members by a two-thirds vote. Each house makes its own rules. For example, the House of Representatives puts strict time limits on debate to speed up business. It is much more difficult to end debate in the Senate. A senator may speak as long as he or she wishes. Senators use this privilege to make long speeches called filibusters to delay Senate action. The Senate, however, may vote for cloture, a motion to end debate. On most matters, cloture requires a vote of 60 senators, or three-fifths of the total Senate membership. See CLOTURE.

Section 5 (3). Each house shall keep a journal of its proceedings, and from time to time publish the same, excepting such parts as may in their judgment require secrecy; and the yeas and nays of the members of either house on any question shall, at the desire of one-fifth of those present, be entered on the journal.

Notes: The House Journal and the Senate Journal are published at the end of each session of Congress. They list all the bills and resolutions considered during the session, as well as every vote. All messages from the President to Congress also are included. The journals are considered the official documents for the proceedings of Congress.

Section 5 (4). Neither house, during the session of Congress, shall, without the consent of the other, adjourn for more than three days, nor to any other place than that in which the two houses shall be sitting.

Section 6 (1). The senators and representatives shall receive a compensation for their services, to be ascertained by law, and paid out of the treasury of the United States. They shall in all cases, except treason, felony and breach of the peace, be privileged from arrest during their attendance at the session of their respective houses, and in going to and returning from the same; and for any speech or debate in either house, they shall not be questioned in any other place.

Notes: The privilege of immunity (freedom from arrest) while going to and from congressional business has little importance today. Members of Congress, like anyone else, may be arrested, tried, convicted, and sent to prison.

Congressional immunity from charges of libel and slander remains important. Libel is an untrue written statement that damages a person's reputation. Slander is a spoken statement that does so. Immunity under the speech and debate clause means that members of Congress may say whatever they wish in connection with congressional business without fear of being sued. This immunity extends to anything said by members during debate, in an official report, or while voting.

Section 6 (2). No senator or representative shall, during the time for which he was elected, be appointed to any civil office under the authority of the United States, which shall have been created, or the emoluments whereof shall have been increased during such time; and no person holding any office under the United States, shall be a member of either house during his continuance in office.

Notes: These provisions keep members of Congress from creating jobs to which they can later be appointed, from raising salaries of jobs they hope to hold in the future, or from holding office in the other branches of government while they are in Congress.

Section 7 (1). All bills for raising revenue shall originate in the House of Representatives; but the Senate may propose or concur with amendments as on other bills.

Notes: Tax bills must originate in the House. The tradition that tax laws should originate in the lower house of the legislature came from England. There, the lower house--the House of Commons--is more likely to reflect the people's wishes because the people elect its members. They do not elect the upper house, the House of Lords. In the United States, this rule has little importance because the people elect both the Senate and the House. In addition, the Senate can amend a tax bill to such an extent that it rewrites the whole measure.

Section 7 (2). Every bill which shall have passed the House of Representatives and the Senate, shall, before it become a law, be presented to the President of the United States; if he approve he shall sign it, but if not he shall return it, with his objections to that house in which it shall have originated, who shall enter the objections at large on their journal, and proceed to reconsider it. If after such reconsideration two-thirds of that house shall agree to pass the bill, it shall be sent, together with the objections, to the other house, by which it shall likewise be reconsidered, and if approved by two-thirds of that house, it shall become a law. But in all such cases the votes of both houses shall be determined by yeas and nays, and the names of the persons voting for and against the bill shall be entered on the journal of each house respectively. If any bill shall not be returned by the President within ten days (Sundays excepted) after it shall have been presented to him, the same shall be a law, in like manner as if he had signed it, unless the Congress by their adjournment prevent its return, in which case it shall not be a law.

Notes: A bill passed by Congress goes to the President for the President's signature. If the President disapproves the bill, it must be returned to Congress with a statement of the objections within 10 days, not including Sundays. This action is called a veto. Congress can pass a law over the President's veto by a two-thirds vote of each house of those members present. The President can also let a bill become law without signing it merely by letting 10 days pass. But a bill sent to the President during the last 10 days of a session of Congress cannot become law unless it is signed. If a bill the President dislikes reaches the President near the end of a session, the bill may simply be held unsigned. This practice is known as a pocket veto.

In 1996, Congress enacted a law that by Jan. 1, 1997, would add to the veto powers established by the Constitution. This law would enable the President to veto certain parts of bills passed by Congress. These parts included some spending items and tax breaks. The power to veto individual items in bills is often called a line-item veto. Under the 1996 law, Congress would, in effect, be able to override such a veto by a two-thirds majority of the members present in each house. The 1996 law would expire after eight years unless Congress renewed it. See VETO.

Section 7 (3). Every order, resolution, or vote to which the concurrence of the Senate and House of Representatives may be necessary (except on a question of adjournment) shall be presented to the President of the United States; and before the same shall take effect, shall be approved by him, or being disapproved by him, shall be repassed by two-thirds of the Senate and House of Representatives, according to the rules and limitations prescribed in the case of a bill.

Powers granted to Congress

The Congress shall have power:

Section 8 (1): To lay and collect taxes, duties, imposts and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts and excises shall be uniform throughout the United States;

Notes: Duties are taxes on goods coming into the United States. Excises are taxes on sales, use, or production, and sometimes on business procedures or privileges. For example, corporation taxes, cigarette taxes, and amusement taxes are excises. Imposts is a general tax term that includes both duties and excises.

Section 8 (2): To borrow money on the credit of the United States;

Section 8 (3): To regulate commerce with foreign nations, and among the several states, and with the Indian tribes;

Notes: This section, called the commerce clause, gives Congress some of its most important powers. The Supreme Court has interpreted commerce to mean not only trade but also all kinds of commercial activity. Commerce "among the several states" is usually called interstate commerce. The Supreme Court has ruled that interstate commerce includes not only transactions across state boundaries but also any activity that affects commerce in more than one state. The court has interpreted the word regulate to mean encourage, promote, protect, prohibit, or restrain. As a result, Congress can pass laws and provide funds to improve waterways, to enforce air safety measures, and to forbid interstate shipment of certain goods. It can regulate the movement of people, of trains, of stocks and bonds, and even of television signals. Congress has made it a federal crime to flee across state lines from state or local police. It also has forbidden people who operate interstate facilities or who serve interstate passengers to treat customers unfairly because of race. See INTERSTATE COMMERCE.

Section 8 (4): To establish an uniform rule of naturalization, and uniform laws on the subject of bankruptcies throughout the United States;

Section 8 (5): To coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures;

Notes: From this section, along with the section that allows the Congress to regulate commerce and to borrow money, Congress gets its right to charter national banks and to establish the Federal Reserve System. See FEDERAL RESERVE SYSTEM.

Section 8 (6): To provide for the punishment of counterfeiting the securities and current coin of the United States;

Notes: Securities are government bonds.

Section 8 (7): To establish post offices and post roads;

Section 8 (8): To promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries;

Notes: Photographs and films may also be copyrighted under this rule (see COPYRIGHT; PATENT).

Section 8 (9): To constitute tribunals inferior to the Supreme Court;

Notes: Examples of federal courts "inferior to the Supreme Court" include the U.S. district courts and the U.S. courts of appeals.

Section 8 (10): To define and punish piracies and felonies committed on the high seas, and offenses against the law of nations;

Notes: Congress, rather than the states, has jurisdiction over crimes committed at sea.

Section 8 (11): To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water;

Notes: Only Congress can declare war. However, the President, as commander in chief, has engaged the United States in wars without a declaration by Congress. Undeclared wars include the Korean War (1950-1953), the Vietnam War (1957-1975), and the Persian Gulf War (1991). Letters of marque and reprisal are documents that authorize private vessels to attack enemy shipping.

Section 8 (12): To raise and support armies, but no appropriation of money to that use shall be for a longer term than two years;

Section 8 (13): To provide and maintain a navy;

Section 8 (14): To make rules for the government and regulation of the land and naval forces;

Section 8 (15): To provide for calling forth the militia to execute the laws of the Union, suppress insurrections and repel invasions;

Notes: Congress has given the President power to decide when a state of invasion or insurrection (uprising) exists. At such times, the President can call out the National Guard.

Section 8 (16): To provide for organizing, arming, and disciplining, the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the states respectively, the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress;

Notes: The federal government helps the states maintain the militia, also known as the National Guard. Until 1916, the states controlled the militia entirely. That year, the National Defense Act provided for federal funding of the guard and for drafting the guard into national service under certain circumstances.

Section 8 (17): To exercise exclusive legislation in all cases whatsoever, over such district (not exceeding ten miles square) as may, by cession of particular states, and the acceptance of Congress, become the seat of the government of the United States, and to exercise like authority over all places purchased by the consent of the legislature of the state in which the same shall be for the erection of forts, magazines, arsenals, dockyards, and other needful buildings;--And

Notes: This section makes Congress the legislative body not only for the District of Columbia, but also for federal property on which forts and other federal works or buildings are located.

Section 8 (18): To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the government of the United States, or in any department or officer thereof.

Notes: This section is known as the "necessary and proper" clause or the elastic clause. It allows Congress to deal with many matters that are not specifically mentioned in the Constitution but are suggested by powers granted to Congress in Article I. As times have changed, Congress has been able to pass needed laws with few amendments to the Constitution. This flexibility helps explain why the Constitution is one of the oldest written constitutions.

Powers forbidden to Congress

Section 9 (1). The migration or importation of such persons as any of the states now existing shall think proper to admit, shall not be prohibited by the Congress prior to the year one thousand eight hundred and eight, but a tax or duty may be imposed on such importation, not exceeding ten dollars for each person.

Notes: This paragraph refers to the slave trade. Dealers in slaves, as well as some slaveholders, wanted to make sure that Congress could not stop anyone from bringing African slaves into the country before the year 1808. That year, Congress did ban the importing of slaves into the United States.

Section 9 (2). The privilege of the writ of habeas corpus shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it.

Notes: A writ of habeas corpus is a legal order that commands people who have a person in custody to bring the person into court. They must explain in court why the person is being restrained. If their explanation is unsatisfactory, the judge can order the prisoner released. See HABEAS CORPUS.

Section 9 (3). No bill of attainder or ex post facto law shall be passed.

Notes: A bill of attainder is an act passed by a legislature to punish a person without trial. An ex post facto law is one that provides punishment for an act that was not illegal when the act was committed. See ATTAINDER; EX POST FACTO.

Section 9 (4). No capitation, [or other direct,] tax shall be laid, unless in proportion to the census or enumeration herein before directed to be taken.

Notes: A capitation is a tax that is collected equally from everyone. A capitation is also called a head tax or a poll tax. The Supreme Court held that this section of the Constitution prohibits an income tax. The 16th Amendment set aside the court's decision.

Section 9 (5). No tax or duty shall be laid on articles exported from any state.

Notes: In this sentence, exported means sent to other states or to foreign countries. The Southern States feared that the new government would tax their exports and that their economies would suffer as a result. This sentence forbids such a tax. However, Congress can prohibit shipment of certain items or regulate the conditions of their shipment.

Section 9 (6). No preference shall be given by any regulation of commerce or revenue to the ports of one state over those of another: nor shall vessels bound to, or from, one state, be obliged to enter, clear, or pay duties in another.

Notes: Congress cannot make laws concerning trade that favor one state over another. Ships going from one state to another need not pay taxes to do so.

Section 9 (7). No money shall be drawn from the treasury, but in consequence of appropriations made by law; and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time.

Notes: Government money cannot be spent without the consent of Congress. Congress must issue a financial statement from time to time. Congress authorizes money for most government programs in lump sums because too much time would be needed to authorize each item separately.

Section 9 (8). No title of nobility shall be granted by the United States: And no person holding any office of profit or trust under them, shall, without the consent of the Congress, accept of any present, emolument, office, or title, of any kind whatsoever, from any king, prince, or foreign state.

Notes: Congress cannot give anyone a title of nobility, such as countess or duke. Federal officials may not accept a gift, office, payment, or title from a foreign country without the consent of Congress.

Powers forbidden to the states

Section 10 (1). No state shall enter into any treaty, alliance, or confederation; grant letters of marque and reprisal; coin money; emit bills of credit; make anything but gold and silver coin a tender in payment of debts; pass any bill of attainder, ex post facto law, or law impairing the obligation of contracts, or grant any title of nobility.

Section 10 (2). No state shall, without the consent of the Congress, lay any imposts or duties on imports or exports, except what may be absolutely necessary for executing its inspection laws: and the net produce of all duties and imposts, laid by any state on imports or exports, shall be for the use of the treasury of the United States, and all such laws shall be subject to the revision and control of the Congress.

Notes: Without the consent of Congress, a state cannot tax goods entering or leaving the state except for small fees to cover the cost of inspection. Profits from a tax on interstate commerce go to the federal government.

Section 10 (3). No state shall, without the consent of Congress, lay any duty of tonnage, keep troops, or ships of war in time of peace, enter into any agreement or compact with another state, or with a foreign power, or engage in war, unless actually invaded, or in such imminent danger as will not admit of delay.

Notes: Only the federal government has the power to make treaties and to carry out measures for national defense.

Article II

The executive branch

Section 1 (1). The executive power shall be vested in a President of the United States of America. He shall hold his office during the term of four years, and, together with the Vice President, chosen for the same term, be elected, as follows:

Section 1 (2). Each state shall appoint, in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of senators and representatives to which the state may be entitled in the Congress: but no senator or representative, or person holding an office of trust or profit under the United States, shall be appointed an elector.

Notes: This section establishes the Electoral College, a group of people chosen by the voters of each state to elect the President and Vice President (see ELECTORAL COLLEGE).

Section 1 (3). [The electors shall meet in their respective states, and vote by ballot for two persons, of whom one at least shall not be an inhabitant of the same state with themselves. And they shall make a list of all the persons voted for, and of the number of votes for each; which list they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the president of the Senate. The president of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted. The person having the greatest number of votes shall be the President, if such number be a majority of the whole number of electors appointed; and if there be more than one who have such majority, and have an equal number of votes, then the House of Representatives shall immediately choose by ballot one of them for President; and if no person have a majority, then from the five highest on the list the said House shall in like manner choose the President. But in choosing the President, the votes shall be taken by states, the representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall be necessary to a choice. In every case, after the choice of the President, the person having the greatest number of votes of the electors shall be the Vice President. But if there should remain two or more who have equal votes, the Senate shall choose from them by ballot the Vice President.]

Notes: The 12th Amendment changed this procedure for electing the President and Vice President.

Section 1 (4). The Congress may determine the time of choosing the electors, and the day on which they shall give their votes; which day shall be the same throughout the United States.

Section 1 (5). No person except a natural-born citizen, or a citizen of the United States at the time of the adoption of this Constitution, shall be eligible to the office of President; neither shall any person be eligible to that office who shall not have attained to the age of thirty-five years, and been fourteen years a resident within the United States.

Section 1 (6). In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice President, and the Congress may by law provide for the case of removal, death, resignation or inability, both of the President and Vice President, declaring what officer shall then act as President, and such officer shall act accordingly, until the disability be removed, or a President shall be elected.

Notes: On Aug. 9, 1974, President Richard M. Nixon resigned as chief executive and was succeeded by Vice President Gerald R. Ford. Until then, only death had ever cut short the term of a President of the United States. The 25th Amendment provides that the Vice President succeed to the presidency if the President becomes disabled, and specifies the conditions applying to that succession. See PRESIDENTIAL SUCCESSION.

Section 1 (7). The President shall, at stated times, receive for his services, a compensation, which shall neither be increased nor diminished during the period for which he shall have been elected, and he shall not receive within that period any other emolument from the United States, or any of them.

Notes: The Constitution made it possible for a poor person to become President by providing a salary for that office. The President's salary cannot be raised or lowered during his or her term of office. The chief executive may not receive any other pay from the federal government or the states.

Section 1 (8). Before he enter on the execution of his office, he shall take the following oath or affirmation:--"I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United States, and will to the best of my ability, preserve, protect and defend the Constitution of the United States."

Notes: The Constitution does not say who shall administer the oath to the newly elected President. President George Washington was sworn in by Robert R. Livingston, then a state official in New York. After that, it became customary for the chief justice of the United States to administer the oath. Calvin Coolidge was sworn in by his father, a justice of the peace, at his home in Vermont. Coolidge took the oath again before Justice Adolph A. Hoehling of the Supreme Court of the District of Columbia.

Section 2 (1). The President shall be commander in chief of the Army and Navy of the United States, and of the militia of the several states, when called into the actual service of the United States; he may require the opinion, in writing, of the principal officer in each of the executive departments, upon any subject relating to the duties of their respective offices, and he shall have power to grant reprieves and pardons for offenses against the United States, except in cases of impeachment.

Notes: The President's powers as commander in chief are far-reaching. But even in wartime, the President must obey the law.

Section 2 (2). He shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the senators present concur; and he shall nominate, and by and with the advice and consent of the Senate, shall appoint ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States, whose appointments are not herein otherwise provided for, and which shall be established by law: but the Congress may by law vest the appointment of such inferior officers, as they think proper, in the President alone, in the courts of law, or in the heads of departments.

Notes: The framers of the Constitution intended that in some matters the Senate should serve as an advisory body for the President.

The President can make treaties and appoint various government officials. But two-thirds of the senators present must approve before a treaty is confirmed. Also, high appointments require approval of more than half the senators present.

Section 2 (3). The President shall have power to fill up all vacancies that may happen during the recess of the Senate, by granting commissions which shall expire at the end of their next session.

Notes: This means that when the Senate is not in session, the President can make temporary appointments to offices which require Senate confirmation.

Section 3. He shall from time to time give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient; he may, on extraordinary occasions, convene both houses, or either of them, and in case of disagreement between them, with respect to the time of adjournment, he may adjourn them to such time as he shall think proper; he shall receive ambassadors and other public ministers; he shall take care that the laws be faithfully executed, and shall commission all the officers of the United States.

Notes: The President gives a State of the Union message to Congress each year. Presidents George Washington and John Adams delivered their messages in person. For more than 100 years after that, most Presidents sent a written message, which was read in Congress. President Woodrow Wilson delivered his State of the Union messages in person, as did President Franklin D. Roosevelt and all Presidents after Roosevelt. The President's messages often have great influence on public opinion, and thus on Congress. Famous messages to Congress include the Monroe Doctrine and President Wilson's "Fourteen Points."

During the 1800's, Presidents often called Congress into session. Today, Congress is in session most of the time. No President has ever had to adjourn a session of Congress.

The responsibility to "take care that the laws be faithfully executed" puts the President at the head of law enforcement for the national government. Every federal official, civilian or military, gets his or her authority from the President.

Section 4. The President, Vice President and all civil officers of the United States, shall be removed from office on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors.

Article III

The judicial branch

Section 1. The judicial power of the United States, shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish. The judges, both of the Supreme and inferior courts, shall hold their offices during good behavior, and shall, at stated times, receive for their services, a compensation, which shall not be diminished during their continuance in office.

Notes: The Constitution makes every effort to keep the courts independent of both the legislature and the President. The guarantee that judges shall hold office during "good behavior" means that, unless they are impeached and convicted, they can hold office for life. This protects judges from any threat of dismissal by the President. The rule that a judge's salary may not be reduced protects the judge against pressure from Congress, which could otherwise threaten to fix the salary so low that the judge could be forced to resign. See COURT; SUPREME COURT OF THE UNITED STATES.

Section 2 (1). The judicial power shall extend to all cases, in law and equity, arising under this Constitution, the laws of the United States, and treaties made, or which shall be made, under their authority;--to all cases affecting ambassadors, other public ministers and consuls;--to all cases of admiralty and maritime jurisdiction;--to controversies to which the United States shall be a party;--to controversies between two or more states; [between a state and citizens of another state;] between citizens of different states;--between citizens of the same state claiming lands under grants of different states, and between a state, or the citizens thereof, and foreign states, [citizens or subjects].

Notes: The right of the federal courts to handle "cases arising under this

Constitution" is the basis of the Supreme Court's right to declare laws of Congress unconstitutional. This right of "judicial review" was established by Chief Justice John Marshall's historic decision in the case of Marbury v. Madison (1803). See MARBURY V. MADISON.

The 11th Amendment to the Constitution set aside the phrase between a state and citizens of another state. A citizen of one state cannot sue another state in a federal court.

Section 2 (2). In all cases affecting ambassadors, other public ministers and consuls, and those in which a state shall be party, the Supreme Court shall have original jurisdiction. In all the other cases before mentioned, the Supreme Court shall have appellate jurisdiction, both as to law and fact, with such exceptions, and under such regulations as the Congress shall make.

Notes: The statement that the Supreme Court has original jurisdiction in cases affecting the representatives of foreign countries and in cases to which a state is one of the parties means that cases of this kind go directly to the Supreme Court. In other kinds of cases, the Supreme Court has appellate jurisdiction. This means that the cases are tried first in a lower court and may come up to the Supreme Court for review if Congress authorizes an appeal. Congress cannot take away or modify the original jurisdiction of the Supreme Court. However, it can take away the right to appeal to the Supreme Court, or it can fix the conditions one must meet to present an appeal.

Section 2 (3). The trial of all crimes, except in cases of impeachment, shall be by jury; and such trial shall be held in the state where the said crimes shall have been committed; but when not committed within any state, the trial shall be at such place or places as the Congress may by law have directed.

Section 3 (1). Treason against the United States, shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort. No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court.

Notes: No person can be convicted of treason against the United States unless he or she confesses in open court, or unless two witnesses testify that he or she has committed a treasonable act. Talking or thinking about committing a treasonable act is not treason. See TREASON.

Section 3 (2). The Congress shall have power to declare the punishment of treason, but no attainder of treason shall work corruption of blood, or forfeiture except during the life of the person attainted.

Notes: The phrase no attainder of treason shall work corruption of blood means that the family of a traitor does not share the guilt. Formerly, an offender's family could also be punished.

Article IV

Relation of the states to each other

Notes: Much of this article was taken word for word from the old Articles of Confederation.

Section 1. Full faith and credit shall be given in each state to the public acts, records, and judicial proceedings of every other state. And the Congress may by general laws prescribe the manner in which such acts, records and proceedings shall be proved, and the effect thereof.

Notes: This section requires the states to honor one another's laws, records, and court rulings. The rule prevents a person from avoiding justice by leaving a state.

Section 2 (1). The citizens of each state shall be entitled to all privileges and immunities of citizens in the several states.

Notes: This means that citizens traveling from state to state are entitled to all the privileges and immunities that automatically go to citizens of those states. Some privileges, such as the right to vote, do not automatically go with citizenship, but require a period of residence and perhaps other qualifications. The word citizen in this provision does not include corporations.

Section 2 (2). A person charged in any state with treason, felony, or other crime, who shall flee from justice, and be found in another state, shall on demand of the executive authority of the state from which he fled, be delivered up, to be removed to the state having jurisdiction of the crime.

Notes: If a person commits a crime in one state and flees to another, the governor of the state in which the crime was committed can demand that the fugitive be handed over. Returning an accused person is called extradition. A few governors have refused to extradite, perhaps because the crime was committed many years ago, or because they believed the accused would not get a fair trial. It is not clear how the federal government could enforce this section. See EXTRADITION.

Section 2 (3). [No person held to service or labor in one state, under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due.]

Notes: A "person held to service or labor" was a slave or an indentured servant (a person bound by contract to serve someone for several years). No one is now bound to servitude in the United States, so this part of the Constitution no longer has any force, being overruled by the 13th Amendment.

Federal-state relations

Section 3 (1). New states may be admitted by the Congress into this Union; but no new state shall be formed or erected within the jurisdiction of any other state; nor any state be formed by the junction of two or more states, or parts of states, without the consent of the legislatures of the states concerned as well as of the Congress.

Notes: New states cannot be formed by dividing or joining existing states without the consent of the state legislatures and Congress. During the Civil War (1861-1865), Virginia fought for the Confederacy, but people in the state's western part supported the Union. After West Virginia split from Virginia, Congress accepted the new state on the ground that Virginia had rebelled.

Section 3 (2). The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States; and nothing in this Constitution shall be so construed as to prejudice any claims of the United States, or of any particular state.

Section 4. The United States shall guarantee to every state in this Union a republican form of government, and shall protect each of them against invasion; and on application of the legislature, or of the executive (when the legislature cannot be convened) against domestic violence.

Notes: This section requires the federal government to make sure that every state has a "republican form of government." A republican government is one in which the people elect representatives to govern. The Supreme Court ruled that Congress, not the courts, must decide whether a state government is republican. According to the court, if Congress admits a state's senators and representatives, that action indicates that Congress considers the state's government republican.

The legislature or governor of a state can request federal aid in dealing with riots or other violence. During the Pullman strike of 1894, federal troops were sent to Illinois even though the governor said he did not want them (see PULLMAN STRIKE).

Article V

Amending the Constitution

The Congress, whenever two-thirds of both houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the legislatures of two-thirds of the several states, shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes, as part of this Constitution, when ratified by the legislatures of three-fourths of the several states, or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the Congress; provided [that no amendment which may be made prior to the year one thousand eight hundred and eight shall in any manner affect the first and fourth clauses in the ninth section of the first article; and] that no state, without its consent, shall be deprived of its equal suffrage in the Senate.

Notes: Amendments may be proposed by a two-thirds vote of each house of

Congress or by a national convention called by Congress at the request of two-thirds of the states. A national convention has never been called, in part because there are no established procedures for operating such a meeting and because of fear that such a convention could result in vast and possibly dangerous changes. To become part of the Constitution, amendments must be ratified (approved) by the legislatures of three-fourths of the states or by conventions in three-fourths of the states.

Notes: The framers of the Constitution purposely made it hard to put through an amendment. Congress has considered more than 9,000 amendments, but it has passed only 33 and submitted them to the states. Of these, 27 have been ratified. Only one amendment, the 21st, was ratified by state conventions. All the others were ratified by state legislatures.

The Constitution sets no time limit during which the states must ratify a proposed amendment. Ratification of the 27th Amendment took 203 years, longer by far than that of any other amendment. The amendment was first proposed in 1789 and did not become part of the Constitution until 1992. Nevertheless, the courts have held that amendments must be ratified within a "reasonable time" and that Congress decides what is reasonable. Since the early 1900's, most amendments have included a requirement that ratification be obtained within seven years.

Article VI

National debts

Section 1 (1). All debts contracted and engagements entered into, before the adoption of this Constitution, shall be as valid against the United States under this Constitution, as under the Confederation.

Notes: This section promises that all debts and obligations made by the United States before the adoption of the Constitution will be honored.

Supremacy of the national government

Section 1 (2). This Constitution, and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every state shall be bound thereby, anything in the constitution or laws of any state to the contrary notwithstanding.

Notes: This section, known as the supremacy clause, has been called the linchpin of the Constitution--that is, the part that keeps the entire structure from falling apart. It means simply that when state laws conflict with national laws, the national laws are superior. It also means that, to be valid, a national law must follow the Constitution.

Section 1 (3). The senators and representatives before mentioned, and the members of the several state legislatures, and all executive and judicial officers, both of the United States and of the several states, shall be bound by oath or affirmation, to support this Constitution; but no religious test shall ever be required as a qualification to any office or public trust under the United States.

Notes: This section requires both federal and state officials to give supreme allegiance to the Constitution of the United States rather than to any state constitution. The section also forbids any religious test for holding federal office. The 14th Amendment applies the same rule to state and local governments.

Article VII

Ratifying the Constitution

The ratification of the conventions of nine states, shall be sufficient for the establishment of this Constitution between the states so ratifying the same.

Done in convention by the unanimous consent of the states present the seventeenth day of September in the year of our Lord one thousand seven hundred and eighty-seven and of the independence of the United States of America the twelfth. In witness whereof we have hereunto subscribed our names,

George Washington--President and deputy from Virginia

Delaware: George Read; Gunning Bedford, Jr.; John Dickinson; Richard Bassett; Jacob Broom.

Maryland: James McHenry; Daniel of St. Thomas Jenifer; Daniel Carroll.

Virginia: John Blair; James Madison, Jr.

North Carolina: William Blount; Richard Dobbs Spaight; Hugh Williamson.

South Carolina: John Rutledge; Charles Cotesworth Pinckney; Charles Pinckney; Pierce Butler.

Georgia: William Few; Abraham Baldwin.

New Hampshire: John Langdon; Nicholas Gilman.

Massachusetts: Nathaniel Gorham; Rufus King.

Connecticut: William Samuel Johnson; Roger Sherman.

New York: Alexander Hamilton.

New Jersey: William Livingston; David Brearley; William Paterson; Jonathan Dayton.

Pennsylvania: Benjamin Franklin; Thomas Mifflin; Robert Morris; George Clymer; Thomas FitzSimons; Jared Ingersoll; James Wilson; Gouverneur Morris.

CONSTITUTION OF THE UNITED STATES/The Bill of Rights

The first 10 amendments, known as the Bill of Rights, were proposed on Sept. 25, 1789. They were ratified on Dec. 15, 1791. They were adopted because some states refused to approve the Constitution unless a bill of rights was added.

The amendments protect individuals from various unjust acts of government. Originally, the amendments applied only to the federal government. But the 14th Amendment declares that no state can deprive any person of life, liberty, or property without "due process of law." The Supreme Court has interpreted those words to mean that most of the Bill of Rights applies to the states as well. See BILL OF RIGHTS.

Amendment 1: Freedom of religion, speech, and the press; rights of assembly and petition

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the government for a redress of grievances.

Amendment 2: Right to bear arms

A well-regulated militia, being necessary to the security of a free state, the right of the people to keep and bear arms shall not be infringed.

Amendment 3: Housing of soldiers

No soldier shall, in time of peace be quartered in any house, without the consent of the owner, nor in time of war, but in a manner to be prescribed by law.

Amendment 4: Search and arrest warrants

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

Amendment 5: Rights in criminal cases

No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

Amendment 6: Rights to a fair trial

In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the state and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense.

Amendment 7: Rights in civil cases

In suits at common law, where the value in controversy shall exceed twenty dollars, the right of a trial by jury shall be preserved, and no fact tried by a jury, shall be otherwise re-examined in any court of the United States, than according to the rules of the common law.

Amendment 8: Bails, fines, and punishments

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

Amendment 9: Rights retained by the people

The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

Amendment 10: Powers retained by the states and the people

The powers not delegated to the United States by the Constitution, nor prohibited by it to the states, are reserved to the states respectively, or to the people.

Amendment 11: Lawsuits against states

(This amendment was proposed on March 4, 1794, and ratified on Feb. 7, 1795. However, the amendment was not proclaimed until 1798 because of delays that occurred in certifying the ratification.)

The judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by citizens of another state, or by citizens or subjects of any foreign state.

Amendment 12: Election of the President and Vice President

(This amendment was proposed on Dec. 9, 1803, and ratified on July 27, 1804.)

The electors shall meet in their respective states and vote by ballot for President and Vice President, one of whom, at least, shall not be an inhabitant of the same state with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the president of the Senate;

the president of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted;

the person having the greatest number of votes for President, shall be the President, if such number be a majority of the whole number of electors appointed; and if no person have such majority, then from the persons having the highest numbers not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by states, the representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall be necessary to a choice. And if the House of Representatives shall not choose a President whenever the right of choice shall devolve upon them, [before the fourth day of March next following,] then the Vice President shall act as President, as in the case of the death or other constitutional disability of the President.

The person having the greatest number of votes as Vice President, shall be the Vice President, if such number be a majority of the whole number of electors appointed, and if no person have a majority, then from the two highest numbers on the list, the Senate shall choose the Vice President; a quorum for the purpose shall consist of two-thirds of the whole number of senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice President of the United States.

Amendment 13: Abolition of slavery

(This amendment was proposed on Jan. 31, 1865, and ratified on Dec. 6, 1865.)

Section 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

Section 2. Congress shall have power to enforce this article by appropriate legislation.

Amendment 14: Civil rights

(This amendment was proposed on June 13, 1866, and ratified on July 9, 1868.)

Section 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the state wherein they reside. No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any state deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Section 2. Representatives shall be apportioned among the several states according to their respective numbers, counting the whole number of persons in each state, [excluding Indians not taxed]. But when the right to vote at any election for the choice of electors for President and Vice President of the United States, representatives in Congress, the executive and judicial officers of a state, or the members of the legislature thereof, is denied to any of the male inhabitants of such state, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such state.

Section 3. No person shall be a senator or representative in Congress, or elector of President and Vice President, or hold any office, civil or military, under the United States, or under any state, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any state legislature, or as an executive or judicial officer of any state, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may by a vote of two-thirds of each House, remove such disability.

Section 4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any state shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss of emancipation of any slave; but all such debts, obligations and claims shall be held illegal and void.

Section 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

Amendment 15: Black suffrage

(This amendment was proposed on Feb. 26, 1869, and ratified on Feb. 3, 1870.)

Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any state on account of race, color, or previous condition of servitude.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

Amendment 16: Income taxes

(This amendment was proposed on July 12, 1909, and ratified on Feb. 3, 1913.)

The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several states, and without regard to any census or enumeration.

Amendment 17: Direct election of senators

(This amendment was proposed on May 13, 1912, and ratified on April 8, 1913.)

(1) The Senate of the United States shall be composed of two senators from each state, elected by the people thereof for six years; and each senator shall have one vote. The electors in each state shall have the qualifications requisite for electors of the most numerous branch of the state legislatures. (2) When vacancies happen in the representation of any state in the Senate, the executive authority of such state shall issue writs of election to fill such vacancies: Provided, That the legislature of any state may empower the executive thereof to make temporary appointments until the people fill the vacancies by election as the legislature may direct.

(3) This amendment shall not be so construed as to affect the election or term of any senator chosen before it becomes valid as part of the Constitution.

Notes: This amendment takes the power of electing senators from the state legislatures and gives it to the people of the states.

Amendment 18: Prohibition of liquor

(This amendment was proposed on Dec. 18, 1917, and ratified on Jan. 16, 1919.)

Section 1. After one year from the ratification of this article the manufacture, sale, or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited.

Section 2. The Congress and the several states shall have concurrent power to enforce this article by appropriate legislation.

Section 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of the several states, as provided in the Constitution, within seven years from the date of the submission hereof to the states by the Congress.

Amendment 19: Woman suffrage

(This amendment was proposed on June 4, 1919, and ratified on Aug. 18, 1920.)

Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any state on account of sex.

Section 2. Congress shall have power to enforce this article by appropriate legislation.

Amendment 20: Terms of the President and Congress

(This amendment was proposed on March 2, 1932, and ratified on Jan. 23, 1933.)

Section 1. The terms of the President and Vice President shall end at noon on the 20th day of January, and the terms of senators and representatives at noon on the third day of January, of the year in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin.

Section 2. The Congress shall assemble at least once in every year, and such meeting shall begin at noon on the third day of January, unless they shall by law appoint a different day.

Section 3. If, at the time fixed for the beginning of the term of the President, the President elect shall have died, the Vice President elect shall become President. If a President shall not have been chosen before the time fixed for the beginning of his term, or if the President elect shall have failed to qualify, then the Vice President elect shall act as President until a President shall have qualified; and the Congress may by law provide for the case wherein neither a President elect nor a Vice President elect shall have qualified, declaring who shall then act as President, or the manner in which one who is to act shall be selected, and such person shall act accordingly until a President or Vice President shall have qualified.

Section 4. The Congress may by law provide for the case of the death of any of the persons from whom the House of Representatives may choose a President whenever the right of choice shall have devolved upon them, and for the case of the death of any of the persons from whom the Senate may choose a Vice

President whenever the right of choice shall have devolved upon them.

Section 5. Sections 1 and 2 shall take effect on the 15th day of October following the ratification of this article.

Section 6. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several states within seven years from the date of its submission.

Amendment 21: Repeal of prohibition

(This amendment was proposed on Feb. 20, 1933, and ratified on Dec. 5, 1933.)

Section 1. The eighteenth article of amendment to the Constitution of the United States is hereby repealed.

Section 2. The transportation or importation into any state, territory, or possession of the United States for delivery or use therein of intoxicating liquors, in violation of the laws thereof, is hereby prohibited.

Section 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by conventions in the several states, as provided in the Constitution, within seven years from the date of the submission hereof to the states by the Congress.

Amendment 22: Limitation of Presidents to two terms

(This amendment was proposed on March 24, 1947, and ratified on Feb. 27, 1951.)

Section 1. No person shall be elected to the office of the President more than twice, and no person who has held the office of President, or acted as President, for more than two years of a term to which some other person was elected President shall be elected to the office of the President more than once. But this article shall not apply to any person holding the office of President when this article was proposed by the Congress, and shall not prevent any person who may be holding the office of President, or acting as President, during the term within which this article becomes operative from holding the office of President or acting as President during the remainder of such term.

Section 2. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several states within seven years from the day of its submission to the states by the Congress.

Amendment 23: Suffrage in the District of Columbia

(This amendment was proposed on June 16, 1960, and ratified on March 29, 1961.)

Section 1. The district constituting the seat of government of the United States shall appoint in such manner as the Congress may direct: A number of electors of President and Vice President equal to the whole number of senators and representatives in Congress to which the district would be entitled if it were a state, but in no event more than the least populous state; they shall be in addition to those appointed by the states, but they shall be considered, for the purposes of the election of President and Vice President, to be electors appointed by a state; and they shall meet in the district and perform such duties as provided by the twelfth article of amendment.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

Amendment 24: Poll taxes

(This amendment was proposed on Aug. 27, 1962, and ratified on Jan. 23, 1964.)

Section 1. The right of citizens of the United States to vote in any primary or other election for President or Vice President, for electors for President or Vice President, or for senator or representative in Congress, shall not be denied or abridged by the United States or any state by reason of failure to pay any poll tax or other tax.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

Amendment 25: Presidential disability and succession

(This amendment was proposed on July 6, 1965, and ratified on Feb. 10, 1967.)

Section 1. In case of the removal of the President from office or of his death or resignation, the Vice President shall become President.

Section 2. Whenever there is a vacancy in the office of the Vice President, the President shall nominate a Vice President who shall take office upon confirmation by a majority vote of both houses of Congress.

Section 3. Whenever the President transmits to the president pro tempore of the Senate and the Speaker of the House of Representatives his written declaration that he is unable to discharge the powers and duties of his office, and until he transmits to them a written declaration to the contrary, such powers and duties shall be discharged by the Vice President as acting President.

Section 4. Whenever the Vice President and majority of either the principal officers of the executive departments or of such other body as Congress may by law provide, transmit to the president pro tempore of the Senate and the Speaker of the House of Representatives their written declaration that the President is unable to discharge the powers and duties of his office, the Vice President shall immediately assume the powers and duties of the office as acting President.

Thereafter, when the President transmits to the president pro tempore of the Senate and the Speaker of the House of Representatives his written declaration that no inability exists, he shall resume the powers and duties of his office unless the Vice President and a majority of either the principal officers of the executive department or of such other body as Congress may by law provide, transmit within four days to the president pro tempore of the Senate and the Speaker of the House of Representatives their written declaration that the President is unable to discharge the powers and duties of his office. Thereupon Congress shall decide the issue, assembling within forty-eight hours for that purpose if not in session. If the Congress, within twenty-one days after receipt of the latter written declaration, or, if Congress is not in session, within twenty-one days after Congress is required to assemble, determines by two-thirds vote of both houses that the President is unable to discharge the powers and duties of his office, the Vice President shall continue to discharge the same as acting President; otherwise, the President shall resume the powers and duties of his office.

Amendment 26: Suffrage for 18-year-olds

(This amendment was proposed on March 23, 1971, and ratified on July 1, 1971.)

Section 1. The right of citizens of the United States, who are eighteen years of age or older, to vote shall not be denied or abridged by the United States or by any state on account of age.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

Amendment 27: Congressional salaries

(This amendment was proposed on Sept. 25, 1789, and ratified on May 7, 1992.)

No law varying the compensation for the services of the senators and representatives shall take effect, until an election of representatives shall have intervened.

Here here! A moment of silence to contemplate, meditate or pray if you wish skirts the edge of constitutionality. There is nothing wrong with it as long as the kids are not pressured to 'pray.'   The PC thinking of today expects that all problems can be solved without resorting to violence but that is just not true. We are teaching the youth of today that they can behave violently and have violent outbursts without any reprocussions. The PC'ers just give them a talking to and explain why they have been bad. Until the kids learn that when they act out with violence they will bring violence back on themselves their behavior will never improve. Imagine how hard it would be to teach a child not to touch a hot stove when every time he touched it he felt no pain but instead felt pleasure? It would do no good to tell him that he is destroying his skin. He only cares for the moment as children (and most adults) do. Look at teen smoking, you can tell them that they are hurting their bodies until they are blue in the face but they will continue to do it. Now if smoking brought on an instant punishment of pain nobody would do it. Evolution has given us an excellent deterrent in pain as a negative reinforcement to bad behavior We should use it. Maybe that is the way to clean up the CB band. Route the antenna lead up their ass so when they key up with 1000's of watts they get a little reminder that it's against the rules....

look in  your state's constitution, You will see the bill of rights accepted
as boilerplate language.  It has to be or it would not have been ratified in
the fed. constitution....

JIm

Green Dragon <nunya@business.com> wrote in message
>Congress never made any law or rule saying that kids in

follow the ground wire out of the fusebox that will usually lead to the plumbing service and is grounded there and also usually goes to one or more ground rods pounded into the earth. To merely ground your radio you can ground to any ground in the electrical system but the closer you get to the actual ground rods the much less chance you will pick up any interference from 60Hz AC power and the dirty harmonics put out by electronic equipment such as Computer equipment, microwaves and fax machines. The easiest way to ground against the static would be right at the electrical outlet. IF it is a grounded outlet and your power supply has a grounded cord all you have to do is jumper the powersupply chassis and the radio chassis. If not you can just change the plug on your powersupply to a 3 prong grounding plug and run up a ground wire (#14 gauge would be sufficient to reference the chassis against static charges) up to the radio chassis. If the receptacle is not a grounded type, all is not lost as most older non-grounded systems were run in metal-clad cable (BX) and that will be a sufficient ground (less than 2 ohm) to ground against static charges. get a ground clip at your hardware store and clip it onto the electrical box being careful to turn off the power first at the outlet before taking it off. Hopefully this will not give you any interference with your reception. IF it does, the only good answer would be to go straight to the grounding electrode of the electrical service found by the electric meter (ground rod).

Jim

Depends which type of resistance you are talking about.

DC Resistance - nearly Zero.
Radiation Resistance - ~50 Ohms.

Bob.

Well that's a shock the what would you put a price on a 2510 or 2950 they don't have the same power and one will not split intill you change the chip so I think that you would say around $50.00 each?? If that's the case then I might as well keep the radio and just get a bigger power supply
thanks..

Try setting the reflector on the ground and then point the antenna
straight up.You could be in a high RF area causing false readings but I
think if you set the resonant freq the SWR will go down when the thing
is at its permanant height.

You should have read the next paragraph Bill, also, I'm pretty sure they
always show up with a Marshall.

Q: The FCC Agent standing at my door does not have a search warrant, so I
don't have to let him in, right?

A: Wrong. Search warrants are needed for entry involving criminal matters.
One of the requirements as a licensee, or
non-licensee subject to the Commission's Rules, is to allow inspection of
your radio equipment by FCC personnel. Whether you
operate an amateur station or any other radio device, your authorization
from the Commission comes with the obligation to
allow inspection. Even radio stations licensed under a "blanket" rule or
approval, such as Citizen's Band (CB) Radio, are
subject to the Commission's inspection requirement.

Actually, there IS a pause, and a tone. In fact, there are some '*'
around here that the one repeater sponsored by a club I belong to
has a 'timeout' that counts how many times it's been triggered. Once
it's been triggered 3 times, the repeater shuts off, period, until
the idle timer expires, which I think is 15 minutes. It's caused
some of the 'longwinded' people to move elsewhere. EVERYONE
hits it now and then, but some people never learn... And they
moan loudly that the repeater s*cks, but they don't wonder that
maybe they are the reason.

As to the original repeater in question ...
Unfortunately, there are no 'penalties' for violating it's intended
operations. Not that a repeater that 'goes down' would help my in
an emergency situation....

That was my feelings over 15 years ago!  17 years ago, I voiced my
discontent over the radio waves.  Many asked that I do not leave, only put
the station away for a year.  Well when I came back after a year, many
people I knew were gone, so I sold the radio. I now have a Cherokee AH 100
for hunting and emergency use.  I also have a Wilson 500 magnetic mount for
the mobile adapting.

I wanted to get some opinion from the pros out there on some radio advice,

I am considering the following radios

Connex 4000 hi power

Ranger 2970

President Lincoln

I currently have a president grant (about 1 1/2 yr. old) and slip seat
into sterling trucks with fiberglass doors (lousy grounds for antennas) I am
just not getting out with this radio and am considering the above.. The
company frowns on mag mount antennas as well.. Thank you and all responses
welcomed...

So that excuses out-of-band operation? That excuses deliberate
interference with other stations? That excuses deliberately ignoring
the legal power limit? That excuses the use of profanity on the air?

>automatically preclude a lot of people from upgrading

The only people this would preclude from upgrading are the people with
the CB mentality that says you ain't s**t unless you have the biggest,
baddest radio on the block. For normal people, you can go to a hamfest
and pick up a very good HF station for a lot less money than you might
think. You may not have the newest, most expensive all-mode HF rig
from Kenwood, Icom, Yaesu...but the older model from a couple of years
ago is no less useful today than it was when it was new.

As far as antennas are concerned, you can buy a used antenna tuner at
a hamfest, get a G5RV from MFJ for a whopping $30, add some coax feed
line and some rope or other nonconducting support and you're ready to
go on 80 through 10 meters for less than most CB antennas cost. Or if
you're that strapped for cash, buy a roll of wire and build yourself a
dipole.

>with write in answers would be in order.   There are lots of
>technical folks, engineers, smart people, etc, that want to get into
>HF amateur radio but the code is a significant barrier to them.

Yeah, I understand that. Unfortunately, the code is also a significant
barrier to the CB operators who can't be bothered with things like
rules. This is a reflection of society - the many suffer because of
the actions of the few.

>Again, for the bands supplied the amateur rules are not unreasonable.
>For the CB part 95 is VERY unreasonable given the circumstances.

What is unreasonable about expecting people to operate ONLY on the frequencies authorized by the rules?

What is unreasonable about expecting people to avoid deliberately interfering with other stations?

What is unreasonable about expecting people to stay within the legal power limits for the mode they are operating in?

What is unreasonable about wanting people to avoid using profanity on the airwaves?

What does the limitation on communicating with stations beyond a certain distance from your own station have to do with the moron who keys up with 500 watts on someone else's QSO and starts retransmitting a broadcast station's music programming?

What do prevailing propagation conditions on the 11 meter band have to do with the morons who break into a friendly conversation between two people they don't even know for the purpose of calling names and obscenities at the participants?

Even if I agree with you in considering the distance limitation to be unreasonable, that does not render the rest of Part 95 any less valid. You cannot use your opinion of that particular provision in Part 95 as justification to ignore the rest of Part 95 right along with it.

>As far as the assholes are concerned they always will be there, not
>much you can do about them aside from stomp on them or ignore
>them.   Ever listen to 75/80M on a random night?   Theres always at
>least one frequency that has "problems" on it.   (Every night it's
>3.950, and other frequencies at random)

The problems on 80m are the subject of a current enforcement action by the FCC. So, you see, there *is* something that can be done about them. Like the old saying goes, "If you're not part of the solution, you're part of the problem."

Want to get rid of them on the CB band? Start sending in complaints about illegal operation to the FCC. Gather your evidence first - make tape recordings of the offenses as they are happening, while others track down the offending party and note field strength readings and results of radio direction finding efforts, and then you send a letter to the violator advising him or her that if they do not clean up their act, a complaint will be filed with the FCC.

If they continue to operate contrary to Part 95, complain to the FCC and supply them with your evidence.

That's how it works on the ham bands, and that's how it could work on the CB band if enough people were willing to get off their butts and do it instead of whining about it and doing nothing.

>And they don't have the choice to discriminate, either, because
>that too is illegal!

Ah, but they DO have the choice to require that the applicant demonstrate that they are qualified for the necessary license, by passing the written and/or code proficiency testing mandated by FCC for the license class being applied for. In fact, it's not even a choice - it's right in Part 97 that they are REQUIRED to do so!

>Most of the true assholes on the CB don't even know what it takes
>to get a ham license, period.   Most of them couldn't pass
>the tech no code test.

Well, at least we agree on something! However, why entrust such individuals with any further HF privileges, in light of what they have done to the CB band? That is the point I am trying to make here, whether you understand it or not. I got my ham ticket to get away from people like that. I certainly don't want them to follow me onto the ham bands, now do I? And neither do any other hams I know...so why would we want to make it any easier than it already is for those morons to get a license?

If the N3CVJ in your e-mail address is a legitimate ham call belonging to you, then you do not need one. The fact that you have a primary station license issued by FCC for your amateur station would place you beyond the jurisdiction of this legislation.

Put a BNC to PL 259 adapter on it, then hook it up to an Antron I-Max 99...or a ground plane. You will get out for miles in all directions...and the best part is when that guy 10 miles away asks you what kind of radio you are on, you can blow his mind and tell him your on a walky talky.

>You have been misinformed.

Trent,

I am a state certified RADAR instructor, and have been one for the last 6 years and have been RADAR certified since 1985. Did you know that RADAR has a plus or minus 1 mph variance? Please cite me even one case where a person was written a ticket and convicted for 1 mph over in the state of Georgia and withstood appeal. (hint) don't bother looking.

You almost got it right, If the zone is 35 mph or greater, Local, County, and Campus officers may not cite unless the speed exceeds the limit by at least 10 mph.

BTW, It's 40-14-8

Regards,

Arnie -

resistance between ground and centre should be infinity or insulation
resistance - ie very high.You are thinking of the dc resistance of the lengh
of the antenna which yes is very low 2-3 ohms .impedance should be ~50 ohms
which is the resistance to the rf signal.

Unfortuntely, Tom, there's no way to enforce civility and courtesy.

Even if Uncle Charlie could somehow force the worst offenders off the air permanently, as long as there's an atmosphere of hostility and rudeness and value placed on the strongest signal regardless of operating practice, more jammers will come. The conditions of extreme rudeness (in some areas at least) create and even attract obnoxious operators. More people will come running power "stepping on" people just trying to have a
normal, friendly conversation, just because they can. Many years ago, I got so disgusted with the nastiness on CB, evasive channel-changing, death threats between CBesr, etc. that I left the hobby forever, never to return. (I was licenced as KBTN 4826.)

The problem is, once the social stigma of being rude and obnoxious to others wears off, it's hard to turn back. Once it's deteriorated into a power-running competition of "might makes right", the battle for CB as a COMMUNICATIONS medium has been lost to the law of the jungle.

About the only way out is to start acting respectfully toward other CBers (except the ones who jam, who need to be *ignored* at all costs, because they're usually looking for a reaction), and hope the jammers will find something more useful to do with their time and money. Courtesy is contagious. :)

This would do 100,000x more than any FCC enforcement to clean up the band and make it useful again.

It would be nice to be able to have a CB antenna on the car and not be pegged as a stupid obnoxious redneck or loser for it.

do you live in a house or an apartment? are there any tall pine trees around? and lastly are you willing to get a base radio?
if you live in a house with tall trees i'd say get an ANTRON-99 put it in a tree and if you want something more convenient get a cheap used base or a mobile and hook it to your power supply. i've got 2 radios a base and a mobile that i picked up for under $15 each.
if you live in an apartment i'd say get a mobile antenna and make your self a ground plane.
... just one guys opinion in a sea of many.

: http://www.fcc.gov/cib/inspect.html

I don't need the link - I am well familiar with the FCC web site, as I work with radio systems for a living. But thank you for posting it for the other readers of the group.

When you read it - don't read anything into it that is not there.

For example: Just because it says that the FCC has the right to examine your station at any time does NOT mean that they can force this examination. You risk suffering various penalties if you refuse - but the only way that an examination can be forced is with a search warrant. That warrant would be accompanied by a federal marshal - very humorless individuals who do not accept "No" as a valid response.

NO, NO, let them go!!!
it's about time that the truth came out. they almost had me convinced that
these things don't go on on the squeeky clean ham bands.:):):)
they are finally admitting to what i've been saying and they've been denieing
for 5 months!!!

```
for heaven's sake, let them go but now that i've mentioned it, it will probably
dry up anyway.

if its like my 2950... the mobile version... there should be two pairs
of jumper pins on the back of the lcd display board only one pair will
be jumped if you move the jumper to the other pair you can tx from 26 -
29.6999 and if you jump both pairs you tx from 26-32.0000 this is fact
for my RCI-2950 i believe this holds true for the RCI-2990 and for the
DX version i'm not sure... i am sure if im wrong others will be quick to
point out my errors.

Read this, then tell me that the FCC can force an inspection without a
warrant.

:>
:>
:>Q: The FCC Agent standing at my door does not have a search warrant, so I don't
:>have to let him in,
:>right?
:>
:>A: Wrong. Search warrants are needed for entry involving criminal matters. One
:>of the requirements
:>as a licensee, or non-licensee subject to the Commission's Rules, is to allow
:>inspection of your radio
:>equipment by FCC personnel. Whether you operate an amateur station or any other
:>radio device, your
:>authorization from the Commission comes with the obligation to allow
:>inspection. Even radio stations
:>licensed under a "blanket" rule or approval, such as Citizen's Band (CB) Radio,
:>are subject to the Commission's inspection requirement.
:>
:>I suggest that you reread it if you still don't understand it, then talk to a
:>linguist, its in plain english. What part of it don't you understand?

Let me put it this way - If you refuse, what can the FCC agent do? The answer is that he can only go and get a search warrant. He cannot force inspection without one. Refusal makes you subject to revocation of any license you may hold and subject to a NAL and possible civil fine, as well as the agent returning with a warrant.

And that is exactly what might happen. That warrant will be served by a federal marshall - who CAN force entry to do the inspection. And hiding any illegal gear will be worthless (and probably worse that leaving it easily seen). If necessary, they WILL tear the house apart to find the illegal equipment.

The Q&A is misleading. I suspect that it is intentionally so.

The answer you listed should have gone on to state what I wrote.

:   Not true,quoted line losses are at a perfect 1:1 SWR,the loss goes up
: drastically from there,especially with coax and that is one reason so
: many people use ladder line.

That is a bit of an exaggeration. With a 2:1 VSWR, the additional loss
due to the VSWR is only about 11%. That is rather insignificant.

Ladder line is desired when the VSWR is much worse than 2:1 - such as
feeding a 300 ohm antenna using an antenna matcher near the transmitter.
Then, ladder line is highly desireable.

These days, the cold water pipe is likely to be PVC - of no use as a ground.

If the apartment manager does not have any objection to CB radio, see about getting an electrician in to provide a semi-decent ground.

where have you been slick. might does make right, that is how it was taught to me, and that is the way it was taught to many and that is the way it is. now as i have said before, i did not make the rules. quit whining about courtesey and if you get your ass run off of one channel , take it to the other one . i mean you really do sound like a mudduck, maybe you ought to stay in the mudduck pond, geez or better yet get a crying towel, i mean this is cb radio, don't you understand that, a place where silly stuff goes on all the time, so quit taking it so seriously. its crybabies like you that are going to mess it up for everyone with this incessant whining to fcc about this and that. if they do get involved, no one and i do mean no one

will like it. haven't you ever heard the government messes up everything it
touches. get a grip, and oh yeh , quit cryin and start buyin, may i suggest
your first stop is ebay,.....good day,.......icm out........

it wouldn't be a case of hiding as much as protecting your right to privacy.
what if you got into an argument with a ham who was "real good friends" with
the local field engineer and he had him come to your house for an inspection,
read harassment, to report back to him on personal aspects of your home life
unrelated to radio?
it is within his power for the engineer to walk into your home to "inspect"
your station but not be blindfolded from your front door to the shack door.
i'm not denigrading all fcc engineers but you CAN'T say it can't happen. they
are human too.
this is why i've said if they want to inspect my equipment, i'll move my
station out to the front porch. they CAN inspect my station but nowhere in the
rules does it say they can inspect my domicile.

unless someone slipped something into the part of the constitution that
protects against negative consequences for refusing warrantless searches of
one's private home, i doubt that it would hold up under court appeal.
the only reason it has gone on for so long is because it's been allowed to.
it's like the old question: why does a dog lick himself???
BECAUSE HE CAN!!!
why does an inspector just walk into someone's home?
again, because he can if no one stands up for their constitutional rights and
lets him do it.
it's NOT a question of hiding something, it's a question of reining in
government powers to within the bounds of the constitution. so much has been
lost because it hasn't been watched and more is to follow if people don't wake
up and smell the constitution burning.

i have NO problem with the fcc inspecting my equipment, as you said, without a warrant.
i would be more than happy to bring mine out to the front porch and will gladly hand him an extension cord and a screw driver.
it is in the rules that he can inspect my equipment but NOWHERE is it in the rules that my domicile is a part of my equipment. my domicile, by it's self, neither generates nor radiates any rf energy of any kind so it, of itself, is NOT a part of my equipment inventory or subject to fcc rules as it is not a broadcast station open for inspection.
nothing to hide, privacy rights to protect.

You want to get your conditions for tuning that antenna as
close to what they'll be when using it as possible. If you
don't use the same coax then you might get your SWR set
tolerable on the grond then have it shoot for the sky on the
tower.

personally, i do believe in the Christian God but that is not my issue here.
when i was in grade school in the 60's, we were asked to stand for a moment of silence, (which was the only silence the teacher heard all day :)).
there Christians, Hebrews, Hindus, those raised atheist and those who didn't care.
the teacher did not dictate any prayer or favor any religion. just silence.
it gave those who had a belief a minute to think and reflect on their activities for the day and those of no belief to just think.
back then we didn't have 1% of the crime in our intercity schools in upstate new york that we have today all over the country.
the biggest news back then was the fat lip or bloody nose that little johnny got and the suspension that little tony got for doing it and little tony was taught a lesson by the suspension and at home.
even in my high school days, if a columbine were to happen, it would have shocked everyone in the school down to their toenails and if any good could come of such things it would have dropped that 1% crime statistic even lower.
today, kids have so little respect for parents and teachers that the schools have become a war zone and the scarry part about it is the teachers can't carry in kind weapons just for self defense. parents have to be afraid of child welfare knocking on their door if they look cross eyed at their kids. i have a friend that, 2 years ago, was threatened by his 17 year old son with a pair of grass sheers. my friend took a rake handle and hit his arm and knocked the sheers out of his sons hand for which his son promptly called the hillsborough county fla sheriffs and had his father removed from his own house for 24 hours or face felony child abuse charges because he left a bruse on his sons arm.
had he hit his son on the head and killed him, it would have been self defense as he did have reliable witnessess in his defense but being he loved his son and didn't kill him, he could have either been killed or went to prison because this "almost adult" pulled a weapon on him first.
our solders in viet nam were better outfitted to be teachers than the teachers are today.
today, if some punk punches a teacher, and the teacher hits back, the punk gets a felony record that, here in fla, disappears as an 18th birthday present because of the juvenile sealed records law but the teacher carries a felony child abuse conviction or at least the stigma of "striking a child" for life along with the possible life-loss of his teaching certificate.

it's funny how an armed punk that asults a teacher suddenly becomes a "child"
when it comes time for that teacher to defend himself.
i love kids, i have 4 and would do anything in the world for them but i
wouldn't last long as a teacher today, doing what would come natural for any
human being who is being accosted by that same punk in a back alley.
well, back to the radio arts.
jeff

Perhaps you signed such an agreement. However, for my CB I
never signed or agreed to anything. If such a signature it
what they use to get people they're probably crap outta luck
with most CBers. I operate my CB station like most hams at
least claim to operate thier ham stations. I run as little
power as I can and still be able to carry on conversations.
That usually means I'm running under 4 watts. A good
antenna (stacked threes in my case) goes a long way.

>>
>>> Train

my mother died of lung cancer 3 years ago at home under the care of hospice.
the gave her great care but they CAN'T go beyond the doctor prescription for pain medication which really irks me to no end because in England, they give herion addics herion like we use methodone and they arn't terminal.
herion is just one step beyond "legal" pain meds and could bring great relief but the feds seem to worry more about someone with 3 months to live becomming addicted than the amount of pain that they are in for their last 3 months of life.
it is just as addictive as dilaudid but the pain relieving qualities of dilaudid are much less to the person still writhing in pain 30 minutes after their last dose and still 3.5 to 5.5 hours from their next.
i in no way advocate the legalization of illegal drugs but if there is a REAL pharmacutical, pain relieving quality that a near-death patient can derive from something without twisting it to fit LSD or other such drugs, i'm all for it.
they put mu mother on a morphene pump at a dose LOWER than they gave me for my back surgery recently. my dose didn't compleatly remove the pain. my mother had a stroke on both sides of her brain 3 days before she died and was mostly unresponsive but was still fully aware of her surroundings. we knew this because she would move her left hand a little in response to yes or no questions.
how was she susposed to operate a manual morphene pump to respond to her pain in her condition?
the home hospice nurse said that we would have to operate it for her.
how were we to know when she did or didn't need it? do we wake her up and ask?
i know the nurse was right when she said she was bound by the doctors orders and couldn't increase it as it would threaten her license for which we could not fault her.
it just seems stupid to me that the govt. and the med. profession worries more about such "addictions" when people are so close to death and are under 24 / 7 medical care.
if they won't legalize mercy death, the least they could do is do all things possible to manage pain to the end.
back to the radio arts. that's the way she would have wanted it.
jeff

Did it just fly over your head or something?  The above
statement of mine, combined with the one immediately
following it serve to point out one of MANY reasons why
atheism is a generally bad idea.  You take part of what was
said out of context and make a fairly lame attempt to twist
it to say what you want it to.  I'll try again in simpler
terms, altho it is rather difficult to talk down to people
who can't comprehend inteligent logical thought processes.

If you are right, and God doesn't exist, then when we die
it's all over.  You've lived your life with this in mind and
have made the most of life in this world.  I on the other
```

hand, have lived my life in a manner that would, according to my beliefs, get me eternal life at the side of God. You probably had a little more fun in this life than I did. But then again, since it's all over I'll not have any regrets.

On the other hand, if you are wrong, and God does exist, then when we die it's not all over. Again, I've lived my life according to my beliefs and assuming they are correct, will be granted eternal life in Heaven. You, again, have lived your life in the belief that this world is all there is and not done those things required for entry into Heaven. You die and wake up in eternal torment for freely choosing to not believe.

> immoral acts of the world have been done in the name of some religion
> or another. Just look at your history books a little.

Actually, most of the events you're refering to were carried out by one or more people who were abusing the power that comes from organized religion. The Bible has been around for thousands of years. It's concepts and storys were orriginally passed down by word of mouth for centuries until the written word was available to record it. Since then, it has been copied and recopied over and over. Yet the content of the message hasn't changed. Even when people take the oldest known manuscripts written Hebrew, Chaldean or Greek and translate them directly to modern English then compare the results to English translations from the earliest times of the Church there are very few differences. Have you ever played the old game called gossip? One person whispers something in his/her neighbors ear and they whisper it in the next persons and so on and so forth. After 10 or so whisperings the entire message has changed completely. The Bible has been thru thousands of such iterations and the message is completely intact. The only way that can be sufficiently explained is that it was protected by God.

> can't understand plain and simple english

Congress never made any law or rule saying that kids in school should pray at a certain time. Nor did they make a rule or law that said they had to. Schools where religious and or people with traditional values were in a position to set school policy merely provided a time when those who wanted could pray, those who didn't only had to respect the right of those who did to do so.

>

> I didn't say forbid prayer. anyone can pray at anytime.
It doesn't take a
> church to pray

But forbidding prayer is exactly what's happened. At least prayer in such a manner where someone else might recognize it as such. Atheist groups tend to target Christians. The ACLU is constantly suing the gov't or other organizatinos for some perceived breach of some groups rights. Yet, when its the rights of Christians that are being breached they're usually suing on the side of those doing the breaching.
Case in point: I don't know about other states, but here in Alabama the churches put up little signs, often blue, somtimes green, that point the way to the church. These signs are paid for by the churches themselves, maintained by the churches, and whenever possible placed on private property. Yet, the ACLU has in recent years attempted to sue city gov't for allowing the churches to post those signs. The amendment that atheists use to support such nonsense makes absolutely no mention of city, county or state gov't. It says that CONGRESS shall make no laws respecting the establishment of religion. Another amendment says that powers not expressly GIVEN to the federal gov't and not expressly FORBIDDEN to the states belong to the states. Well, the power to make laws concerning religion is expressly forbidden to the feds. That means the federal gov't can't legally make any law, pro or con, concerning religion. They can't legally ban school prayer nor can they

legally require it. They can't legally stop churches from
posting little signs, nor can they legally provide those
signs. They can't legally stop school children from having
their meet me at the pole prayer meetings on school property
nor can they legally be actively involved in organizing
such. The only way that amendment can be interpreted any
other way is if the person interpreting it changes the
meaning of the words to suit thier own agenda.

> your false jehova. BUT, your religion is no better than
mine in the eyes of
> the law. THATS HOW IT WORKS

It goes both ways, your religion is no better than mine and
deserves no special treatment that mine doesn't get. Yet, I
doubt very seriously that the ACLU has EVER attempted to
stop whatever religion you follow from doing what ever you
want. Here's an example of how there's a double standard.
Our religion requires us to at least tell others about
Christ. If they're not receptive, so be it, we've done our
job by planting the seed, if it grows, praise God. Yet, if
a Christian teacher attempts to follow his/her religion in
that aspect they can lose thier job because of laws that
have been passed limiting our ability to follow our
religion. Yet some American Indian tribes can legally
ingest peyote which is a controlled substance and illegal,
because it's part of thier religin. They are allowed to
follow parts of thier religion that are illegal, while we
are prevented from even discussing ours on public property.

Christians who read the Bible for themselves instead of merely allowing some preacher to read it for them don't "keep bringing it up" as you say. I don't know what religion you follow, but if your serious about it, you follow all of its rules and precepts. One of the primary precepts of Christianity is the tell others about Christ. The Bible says that we are to tell everyone we meet. It also tells us that if we meet someone who isn't receptive, we're not to press the issue. That's why I'm not trying to convince you that your religion is false. I know you wouldn't be receptive to it. Now, I'll argue Constitutional law with you all day long, but you wont catch me trying to convert you not that I know you're attitude. Most of the worlds religions believe in some form of punishment for those who don't live by the rules of their religion. For some, it's reincarnation as some lower form of life to be repeated until they get it right. For most of the others it's eternal life in some unpleasant plane of existence. Be it Hades, Ghenna, Tarterus, Hell, or whatever. Even the few that don't have a punishment in some form, do have a reward of some sort. Reincarnation as a rich person, Nirvana, Enlightenment, unity with the Brahman, Heaven or whatever.

In my religion it happens to be Heaven and Hell. And in this lies another of the double standards that exists. Christians are often hated by non-believers because of our concept of Hell. However, other religions are at worst made fun of. For example, those religions that believe in reincarnation are laughed at because of the idea that a non-believer might be reincarnated as a cricket or something. Why such a double standard? Because true Christianity says that lots of the behaviors that non-belivers like to engage in will get non-belivers a ticket to Hell. Homosexuality, alcoholism, gambling, pre-marital sex, and drug use are just a few examples. Christianity holds it's followers up to a pretty high standard, and since Christians are human just like everyone else we often fail to meet that standard. However, success as a Christian isn't measured so much in how good a job you do at avoiding sin as it is measured in how honestly you make the attempt. If a person honestly believes in Christ then they will automatically make an honest attempt to live up to the standard. The problem is that if he fails in any way so that the public sees it they tend to hang him/her out to dry. Such things don't happen to Muslims, Buddhists, Hindus, or other religions. Just Christians and those pseudo-Christian groups that occaisionally pop up and make Christianity look like a bunch of kooks such as the Branch Davidians, Jev. Witnesses and others.

Anyway, I appologize now for going so long on this post. This will be my last post on this topic as it is waaaaay off the topic of this newsgroup.

I'm in need of an owners manual and/or schematics for a Lafayette HA-270
amplifier. This unit is designed for operation from  7Mhz to 29Mhz and gives
about 100w with 10w input. Mine worked well for me in a mobile installation
until a week or so ago. This amp has to be nearly 20 years old maybe more. I'll
gladly pay copying/shipping charges.

Thanks in advance

My point is this, Jeff...you want a no-code band on HF. There already is a no-code band on HF. And it is a MESS because of operators who do not operate according to the rules for that band. By that, I mean the CB rules, not ham rules.

Now, I'm not going to even attempt to guess the percentages of CB operators who do and don't obey the rules of Part 95, because it really doesn't matter. What does matter is that CB could very easily be what you are talking about. The FCC could institute licensing, testing, etc. on 11 meters, expand the band the include the so-called "freeband" frequencies, allow higher power, allow other modes such as FM on part of the band, etc.

The FCC *could* - but it probably never will...and every time you turn on one of your radios and hear a potty-mouth, or a carrier dumper, or a music player, or a bunch of brain-dead idiots having a keydown, or people operating on frequencies other than the 40 they are allowed to operate on, you are listening to one or more reasons WHY the FCC will probably never expand the privileges that Part 95 already grants CBers. There is no reason why the FCC - or anyone else with even half a brain - would think it appropriate to grant additional privileges to users of a radio service where so many of the operators can't handle the privileges they already have.

>yes, i've heard many say, "in case of mic. failure, you can always tap out the
>code".
>this is true but in the last 70 years, they've come a long way in microphone
>technology and they really are much more dependable since the days of the
>carbon crystal mics. this arguement sounds like the paranoid cries of a dooms
>day survivalist.

I've stated my position on the code issue in rec.radio.amateur.policy on numerous occasions, I'm not going to waste bandwidth repeating it here in rec.radio.cb but you can check http://www.qsl.net/kc2fng/ if you want to see where I stand on that issue so that you'll know where I'm really coming from with the rest of this.

I've had enough of the code argument to make an ape puke. Talking to the pro-coders about no-code licensing on HF is like talking to a brick wall. I have come to the conclusion that, despite all the arguments the pro-coders use to try to justify their position, there is only one argument that really holds water. The code testing requirement for HF privileges serves as a filter of sorts. It keeps the riff-raff off the HF ham bands.

Now, personally, I have no doubt that a CB operator who obeys the rules on CB would be perfectly capable of having a no-code ham license on HF and obeying the rules on the ham bands too. I also have no doubt that the morons who key up on other people, play music, spout obscenities, operate out of band, and generally act like a major ALPHA HOTEL every time they get near a radio, would NOT be capable of obeying Part 97 rules for a no-code HF ham license, anymore than they have proven themselves capable of obeying Part 95 rules.

The problem is that when someone shows up for the written exam for a ham license, the Volunteer Examiners have no way of knowing if the guy taking that exam is a good CBer, a moron, or is someone who has never even touched a CB in his life. Neither does the FCC, upon receiving this person's license application.

We have know way of knowing the nature of anyone who applies for a license. All we do know is that the vast majority of the people on the CB band who act like total idiots on that band claim to not be interested in ham radio because of the code requirement.

I don't know if you fit into this category or not, Jeff...I don't live in Florida and so I don't have the opportunity to observe your behavior on the air. I do know that, having been in my previous post on this thread about the fact that the 6 meter band acts like an HF band and gets the same E-layer skip that HF does, your response was to tell me that you're only interested in HF. Despite the fact that you can do the same thing on 6 meters that you can do on HF - and then some - you're not interested. Despite the fact that you do not need to know the code to get licensed for 6 meters, you're not interested.

So, I have to wonder what it is you ARE interested in...communicating? Or being able to break the rules and thinking you can get away with it because you can blend in with a few thousand other rule-breakers?

>what does these radios and there legal use on 10 meters have to do with the
>bowl? if modified properly for spectral purity, a cb is just as good as any qrp
>ham rig. in some cases, they have the same circuitry.

Yep...the difference is that there is a licensed ham at the controls, who - because s/he has a license to lose if s/he does not obey the rules, is more likely to operate in accordance with Part 97. I never said we couldn't let the radios onto 10 meters - we already do. What we can't allow on 10 is some of the people who operate those radios in the CB bands - the ones with limited vocabularies who have to resort to profanity to compensate, who play music while others are trying to talk, who...well, I'm sure you get the idea. It's not necessarily the radios from The Bowl that we don't want, it's the operators.

>i have a uniden pro 810-e and a president 2510 which, as far as am / ssb, are

>if i were to change the crystals in it's crystal kit, it would make a great 10
>meter ssb qrp base at a non-parts modified 20 watts pep that it puts out now.
>please don't cloud the issue.

Well, 20 watts is four times what most QRP operators consider to be QRP, but that's beside the point. I'm not clouding the issue, you're avoiding the issue - which is simply that there are a lot of operators on the CB band whose operating practices leave a lot to be desired. To me and to most normal people, a two-way radio is a means of communication. To these idiots, it is a toy to be used to annoy other people. These people are crazy! How do you communicate when you have ten or fifteen people all keyed up at once on the same frequency, using amplified echo mikes that are cranked up so far that nobody can understand a word the operator says? If the FCC ever gives more of the HF spectrum to these jerks on The Bowl, they're crazier than the jerks on The Bowl are.

>it wouldn't be the same because the ones who respect their licenses would
>conform to the rules and the ones who don't would get shut down because
>enforcement is much more strict on the ham bands. i've heard the same stuff
>about stricter enforcement on 11 meters but i've also heard this many times
>before. they come out until the dust settles and go home and it all starts over
>again.

The reason that enforcement is stricter on the ham bands, Jeff, is that the ARS is largely self-policing. If someone got onto a ham frequency and pulled the kind of crap I hear on The Bowl every night, there would be a fox hunt with several amateurs locating the offending parties and they would then receive a letter from an ARRL Official Observer requesting that they knock off the B.S.

If that wasn't sufficient to put a stop to the nonsense, the next step is a formal complaint to the FCC, with possible loss of license, confiscation of equipment, and fines.

You see what happens in this newsgroup when the prospect of that kind of enforcement on the CB band is mentioned here? Instead of a lot of CBers coming out and welcoming any attempt to clean up the band, which might actually lead to CBers getting the kind of privileges on HF that you seem to want...we get s---house lawyers like Hightower telling us the FCC has no authority to enforce its regulations. We get some buttwipe who says he'll sick his pit bull on the FCC agent. We get pinheads like Ice Cream Man who talk the same way in the newsgroups that they do on The Bowl because that's the only thing their puny little minds are capable of dealing with. Forget trying to communicate with morons like that, because they aren't capable of it. They never got past Middle School, and it shows every time they get behind a keyboard - or a microphone.

If all the CBers who operate within the rules of Part 95 would act the same way when someone abuses their privileges on the CB band that hams do when someone abuses their privileges on the ham bands, in five years the morons would be gone from CB. At that point it would be feasible for CB operators to petition the FCC for more privileges. But the way things are today, forget it...the laughing in Washington would be so loud you could hear it all the way to Seattle.

>i am aware of the no-code tech license but there are people like me with no
>interest in comms above 50 mhz or the 2 meter cb band.

2 Meters is a ham band.

>i can go to a yard sale almost any weekend and pick up an ssb cb for under
>$25.00 and be on 10 meters in an afternoon at no cost considering the size of
>my "junk box".

Waste of time to modify the radio. You can go to a hamfest and get a 10m QRP rig for the same money! But you need the license first.

>i don't talk on 10 but i do monitor and, to tell you the truth, haven't heard
>any conversations that i'd be interested in joining. i know that, at times,
>i've used "colorfull" language here to get my point across but i'm not that way
>on the air but some of the stuff that i hear on ten has valium beat in the
>sleeping pill department hands down.

Well, now that you mention it, Jeff...if you don't use that kind of language on the air, that's good...but why use it here? If you want to be perceived as having something more upstairs than the idiots that ruin the CB band for everybody else, then why talk like they do?

Now that you've stopped parroting the potty-mouth routine of some of the other pinheads in this NG and started to actually make an effort to express yourself in a manner that isn't immediately offensive to others, I'm more inclined to listen to what you have to say, and you do make some sense. A licensed no-code band on HF just might be a good idea. In a way, I even agree with what you're saying. But given the current state of affairs on the CB band, the only way I can see this happening at any time in the next ten years or so, is if the Technician Class privileges in the ARS are extended to include full ham privileges on 10 meters...and that isn't likely to happen because the General, Advanced, and Extra classes will scream bloody murder the second you even bring up the idea.

That is why I ask you to consider getting a Tech ticket, even if you aren't necessarily interested in operating above 50 MHz. If everyone on the CB band who is a responsible operator, obeys Part 95, behaves like a civilized human being, got a Tech class ham ticket there would be so many no-code Techs that the call to open up 10 meters to no-code Techs would carry a lot more weight with the FCC.

>as i said before, i have no interest in vhf / uhf comms.
>i've been in and around 11 meters since 1972 and am still perfectly content
>with it.

Well, if you're perfectly content with it, why are you suggesting the creation of another no-code band on HF with a license and testing? Apparently you aren't THAT content with it. :-)

>if i were interested in generating that much power, i could do it on 11 meters.

Not legally, you can't.

>i do that now. it's just not what some would consider "witthin the rules".
>mostly, my interests lie in ssb.

In other words, you're a freebander and are operating on frequencies you are not legally permitted to operate on. Now, why should the FCC want to license you on another part of the HF spectrum? Why would it expect you to obey those rules, when you don't even obey the rules that apply to your operation now?

>the only difference between me and a "legal" ham is the frequencys used and a
>piece of paper.

That, and the fact that a "legal" ham - or for that matter, a "legal" CBer - obeys the appropriate FCC regulations...which, by the way, is the only thing that keeps the entire radio spectrum from sounding just like The Bowl - adherence to regulations. Without that, we have complete anarchy on the airwaves, and the entire RF resource because useless to everyone.

>i, unlike some others, am proud of my equipment and make great efforts to keep
>my radios spectrally pure.
>i get hours of entainment at the challenge of obtaining, modifing, and
>maintaing my radios in top shape.
>i don't take the easy way out and buy already "good" radios and do the simple
>jumper-block mods, i buy cheap yard sale left overs and turn them into
>something really good or it becomes junk box fodder.

If you're operating on unauthorized frequencies, Jeff, it really doesn't matter if your running technically sound equipment or not, you are still ignoring the regulations that govern your operation of that station. Using spectrally pure equipment to violate the FCC rules does not excuse violating the rules, anymore than my using a sterilized knife to cut your throat with would excuse my cutting your throat. And every person who continually violates Part 95 in this manner figuratively cuts the throat of the entire CB Radio Service by demonstrating to the FCC that CBers cannot obey the rules and thus removing any incentive the FCC might have to let Cbers use more frequencies, use more modes, use more power legally. Why can't you and others like you understand that?

>if it were up to me, i wouldn't turn "a few more mhz of spectrum into the
>bowl".
>all that i would like to see is a 450 khz piece either above or below cb turned
>into a LICENCED area with the associated privledges for experimenation purposes
>for those who don't want to be a ham. 200 or 300 watt limit, am, fm, ssb mode,
>a technical test and the same enforcement as hams.

I understand that. However, the FCC doesn't. All the FCC understands is that you can't follow the simple rules they have set up for the CB band, therefore they have no reasonable expectation that you'd follow any rules they might set up for a licensed band either.

You're asking that the FCC make it legal for you to do what you are already doing illegally, and THEN start enforcing the regulations! What you don't seem to understand is this...why should the FCC want to create yet another enforcement headache for itself?

When the current CB service was first created, there was a 5-watt power limit, a 150-mile distance limit on communications, and it was NOT supposed to be a hobby radio service at all. That was in 1958. Some 20 years later, the FCC modified its regulations for this service to bring it in line with actual operating practices on the band. They dropped the no-hobby regulations. They gave us a no-test, low-power hobby band. And what did people do with it? As soon as their formerly illegal operations became legal, they found new ways to operate illegally. You really think the FCC wants to go through that again???

>you could almost call it a "learners permit" for a ham license. some people
>would get tired of the limited spectrum, power and modes and, by then, maybe
>have enough respect for what a license means and would upgrade the way a novice
>would go tech plus, to tech, to general to extra.
>it could be actually one class LOWER than novice for those who don't want to go
>all out for "full ham".

Learner's permit? More like an entry-level license class. The thing is, there are already two entry-level ham tickets as it is, and you've already told us you're not interested in the one that permits HF operation (Novice) because of the code, and you're not interested in the one that permits codeless entry into ham radio (Technician) because the privileges it grants doesn't allow you to operate on HF. So instead, you want the FCC to create yet another entry-level license class, and start turning people loose on yet another 450 Khz worth of the HF spectrum, and let them run 200 watts and bounce their signals all over the world...but you still haven't shown us that you have any respect for the operating privileges you already have. You can't even operate legally under the rules you're supposed to operate under now. So why should FCC expect you to operate under the rules if it gave you what you're asking for?

>my wife has no interest in learning the code either but would like to have more dependable local comms. than cb offers. it could also be considered a higher powered version of FRS. the 2 mile at best FRS just doesn't cut it in some cases. these may be good for flea markets and malls but i travel farther than that and she is home.

Well, there's an answer to that, too, it's called GMRS. In fact, it shares some frequencies with FRS, but uses higher power, and repeaters. And there is no test for a license, either.

>for her, all she needs is basically a higher powered cb and would be willing to pass a minor technicalo test to get such a licence. the 4 watt limit was great in the begining but is usless now not only because of the real idiots but also of the shear numbers of "legal" cb's in use with the advent of cheaper technology and the upswing of the new solar cycle.

Well, then she should get her Technician class amateur radio license. Since you insist on calling the 2-meter ham band "2 meter CB" then okay, fine, I won't argue with you...that's exactly what it is, then...so go get your licenses.

>if the license that i proposed were to exist, i wouldn't have to put up with the bowl either and a lot more cb'ers wouldn't have to put up with a lot of the crap that they have to put up with now as more people,(not all), would go for the license so they wouldn't have to look over their shoulder for uncle charley as the price to pay for more power or quieter channels.

Which is exactly why there are some 150,000 no-code Technician class ham operators today. The VHF bands are a lot quieter than the CB channels, especially when the "skip" is in on the CB band. Thanks to repeaters, you can use a 5-watt HT and talk to someone halfway across the state if you want to. And there is no Toilet Bowl either.

>this is why cb'ers have, and still do go over to ham but "all out" ham just isn't for everybody.

To me, Jeff, "all out ham" is when you pass five written tests and three code tests and qualify for your Extra class license. Everything you've said you want to do communications-wise, you can do on the 6-meter band, but you claim not to be interested in operating above 50 Mhz. Why not? Because you can't use your CB rig there and would have to buy another radio? If not, it sure looks that way, Jeff...you sound like you just want to fiddle around with your garage sale CB radios

and can't be bothered to obtain any other equipment, so you're content
to just go on ignoring the FCC regulations and whine because the FCC
won't change its rules to legitimize your illegal operating practices.

And if that's the case, that's not going to buy you any credibility
with me or with the FCC.

>have a good day.

You too, Jeff. :-)

73 and good DX'ing,
John D. Kasupski

I owe Hightower an apology for the above reference, this should have
said Wildcat rather than Hightower. My mistake, in a post that also
contains some grammatical errors. Guess I shouldn't post before my
morning coffee.

So, Hightower, I apologize...it wasn't you I had in mind when I posted
the above. From now on, I'll wait until I'm fully awake before I post.

73 and good DX'ing,
John D. Kasupski

You fail to understand that the rules imposed for CB are unreasonable
due to the fact that the band carries skywave communications. It is

oxymoronic of the FCC to even think about preventing a CBer for
talking to distant stations, especially considering that 4 watt
"legal" stations are landing in your lap from 5 states away.   In the
amateur side of things, the amateur license provides for reliable
communications under many different bands.

Again, read above, the privledges are rather unreasonable for the
chunk of spectrum that is assigned.

CB was supposed to be for short range communications; fat chance
being in the middle of a skywave band.

>the riff-raff off the HF ham bands.

Not really true.   The real filter is antenna restrictions and
equipment costs.   Even if you let everyone get full HF access
with a 100 question test, lets say, I doubt there would be tons of
new people on HF overnight.   It takes more capital to set up an
HF station thats worth more than a pile of dirt, too.... so that would

automatically preclude a lot of people from upgrading
anyways.   The best way to attack this is to have a second
"extra" test, which has more/harder questions.   Perhaps something
with write in answers would be in order.   There are lots of
technical folks, engineers, smart people, etc, that want to get into
HF amateur radio but the code is a significant barrier to them.

>

Again, for the bands supplied the amateur rules are not unreasonable.
For the CB part 95 is VERY unreasonable given the circumstances.

As far as the assholes are concerned they always will be there, not
much you can do about them aside from stomp on them or ignore
them.   Ever listen to 75/80M on a random night?   Theres always at
least one frequency that has "problems" on it.   (Every night it's
3.950, and other frequencies at random)

>

>
Most of the true assholes on the CB don't even know what it takes

to get a ham license, period.   Most of them couldn't pass
the tech no code test.

snip snip snip.

More of the same stuff reiterated again.

I have a Realistic TRC-212 (21-1662) for sale. This is the full size
40 channel unit with carrying case. High/low TX power switch. Around
5 watts output on high. LCD display with TX and receive meters.
Great shape. Original long (around 5 feet) center loaded antenna. Has
external antenna, power and charging connections. Has an 5-pin
external mic connection as well. Uses 8 'AA's or 10 'AA's
rechargeables and you can recharge the batteries WITHOUT taking the
batteries out. (Batteries and charger not included)

Asking only $ 40.00 plus shipping.

A Picture can be e-mailed.

And if a frog had wings he wouldn't bump his ass on the ground every
time he hops.

Yeah, the guy was an idiot. But in case you haven't noticed idiots are
everywhere. I had two guys 'quick keying' on a local HAM repeater
while I tried for over 9 minutes to break into get an emergency call
through. After 2 or 3 minutes I gave up exclusively trying, and
alternated with a 'long distance' machine I finally got through on. The
end result was the emergency call was not in time, a total loss. Could

it have been prevented? Who knows, I never got the chance. Once I got through though, I eventually went back to these guys, and FINALLY they left a break, and I spoke my mind. I'm sure it did a whole lot of good, but it did make me feel better.

One time in Dallas I broke in on a converstation for an emergency. One of the individuals chastized me and basically wanted me to 'prove' it was an emergency before he would relenquish space. I made the call, and formally complained about him. I got a VERY appolgetic letter from the club involved, with real signatures from all their officers and a detailed outline of how that would be prevented in the future. The club handled it very well, in my opinion.

There have been numerous fines and cases published over the last umpteen years. I assume that there must be some level of court involvement at some point. It's not the same as the OJ trial, but there needs to be a court involved to enforce any fines, or to mediate any challenge. SOMEBODY has to hear the evidence and make the judgement call.

> Most individuals are bullied into stipulating to the FCC's demands

True to a point. Intimidation works in many cases. But if you ARE in the right, you can fight and win. But if you are cought with your hands in the cookie jar, and the FCC has the goods on you, don't think that by fighting, you will overturn their judgement. You may be successful at having the fine reduced, if you can prove financial hardship.

> However, what will be very interesting to see is the outcome of a Ham called

I am unfamilair with the particulars of this case, so I can't comment. But as far as I'm concerned, if there isn't a rule specifically prohibiting a particular action, then the action cannot be cited as illegal.

> You know what? The

I agree that "bully tactics" only work if you do not understand the principles of law. But as far as the scope of this original discussion, if you DO willfully violate written rules, you should not be surprized if you get tagged.

> his 8 pill box (unless he's disrupting some sort of public communications
> with his transmissions).

You're right, it doesn't happen overnight. Usually the FCC will take their time, and build their case, by silently monitoring the illegal. Usually the illegal will be operating long enough that the FCC will have no problem determining that the equipment is illegal. Once this evidence is presented to a judge, there is usually no problem getting the probable cause to have a warrant issued. It happens all the time.

The FCC is not going to announce on the air that they're monitoring. You could be happily working DX on 27.555, running 500 watts, and be totally unaware that the FCC "van" is recording your contact, making ERP measurments, and frequency. It will be pretty hard to counter their evidence, especially if they come to your door, with warrant in head, and US marshalls, and find the illegal equipment.

>Hams are a bit
> > different in that respect.
>
> Thats because most Hams are intimidated by just about anything.

No, hams understand how the FCC works, and generally have more respect for the rules.

> If you listen to their QSO's, they'll have you believing that a Black Stealth Helicopter is hovering over their house at any given time recording their transmissions or an infrared satellite is looking through the walls of their houses. I personally think they've watched to many Rambo re-runs.
>
> >If the FCC man knocks at your door and wants to do an inspection, you either let him in on the spot, or you can lose your ticket.
>
> Wrong Dave. No one has to agree to an "on the spot" inspection. Again most Hams agree to an inspection by their own will but no one has ever lost their license for NOT letting the FCC in their house immediately.

The FCC is an administrative agency that has the power to issue, suspend or revoke your operating license, much the same as the DMV does with respect to driver's licenses. The FCC can suspend or revoke your license for any reason that they choose, if you do not follow their rules. One of the rules is that you have to agree to let their man in to inspect your station. You can say no, and the man will leave, but you WILL lose your license, for breaking that rule. Read some of the many published cases, in a few there were incidences of hams not allowing inspections, and their licenses were pulled as a result. In some of these cases, the ham was able to "bargain" for his license back again, after agreeing to other conditions, but the FCC CAN and WILL pull your ticket, if they choose to.

Now, you can say "F*** the FCC" and operate without your license, but then they can pop you for operating without a license, which has a greater fine. CBers have no license to pull, so the FCC has to issue citations, and NAL's, and make their case to whatever legal branch oversees their operation.

I have read them. S9 magazine used to print a collum, called "Washington
Outlook", where FCC actions against CBers were published. I read them
then, and I still see them from time to time. I've been personally
involved with tracking ham jammers, and saw what the FCC did when they
finally caught one of them. Not all of them involved failure to allow
access. Usually, when they go after someone, like I've said before, they
have the warrant and the US Marshall, so there is no arguement.

Sure, any lawyer will smile at you and take your money, but I don't
beleieve that paying a lawyer $1000 to save a $200 radio is "winning".

Again, there is a difference between proving that a particular action is
enforcable, as illegal, and other actions, which are clearly illegal,
that people try to fight.

All I know comes from experience. I can put a 2950 on the bench hooked to my generator, and a 148, and the Ranger works down to a lower microvolt signal. The first stage coil is sensitive. If you tune the coil improperly, you get more signal, but a heck of a lot more noise as well, and the signal/noise ratio gets worse. If you set the 1st stage properly, the 2950 has a usuable signal down to .15 uV. The 148 is about .25 uV. Because of the varactor tuning, the sensitivity bandwidth is also greater. I can optimize the receiver for CB, and still have good sensitivity on 29 Mhz. The 148 won't do that.

The AGC on the 2950 is pretty poor though. I've had to change many of the feedback resistors, so that the radio does not overload on strong local signals. It now only overloads if someone is as close as one or two car lengths. I like it that way as it gives me an instant clue how close someone is, without me having to look at the meter.

You did not have to sign anything, the first time you keyed up, you
agreed to make your station available for inspection as per FCC rules.

Anyone else hear this guy yesterday? Claims to be in Hershey, PA. Apparently
has an axe to grind with a group of operators in Abilene, TX. Repeatedly
referring to them as "a bunch of butt dabblers who floss their teeth with each
others anal hairs." Over and over again, just like a broken record, for several

hours.

Good place for Riley to start is with this guy, eh?

Evidently, you have never been inspected, well, it don't work like the outhouse lawyers tell ya. Mr. FCC will come to your door, knock and when you answer, ask to inspect your radio gear (They have usually DF'ed you and "fingerprinted" your transmitter on an scope, so there it goes. At that point the FCC will show you his Federal ID and badge. YOU MAY REFUSE, HOWEVER, he may cite you with an NAL (notice of apparent liability) for "Lack of Candor," at this point it gets dicey because then Mr. FCC is left with two options, 1. Warrant 2. Get Federal Attorney to Collect NAL.   Option is simple, Mr. FCC gets Warrant, gets braun from 3 letter federal agencies and commences to search. Option #2 is death by slow means, usually years, as the Federal Government tries to collect "Fine" which usually ruins your credit record, places a federal lien on your property and costs you lawyer bills and headaches as you try to explain "Constitutional Rights" to a Federal Attorney and Judge who are not impressed.

By the time the FCC is at your door, they usually have done their homework, know more about you than your motherand have your name and MO (modus operandi) for future reference.

>Sorry Wildcat, I appreciate and Agree with Bills input.

You appreciate and agree with Bill's input? Now you've just made evident your true level of intelligence. Thank you Mr. Hightower, because I couldn't have done a better job even if I tried.

Did you happen to notice the word "Agree" in your sentence?

If you did, you are openly acknowledging that you either didn't read, or didn't understand what was previously written, because Bill told you to go out and find a linguist due to your lack of comprehension.

Do I also have to explain to you what a linguist is?..........................What a putz!

What does this have to do with CB, other than similar dirty mouths are on CB
too?  You Hambo's go back to your Hambo News Groop, cause we don't want to
know of your Amateur band filth, since there is enough of it that seeped
into 27 MegaCycles  from your Hambo freqs.  nearby  (2 meter) !!!!
Dave!!!!!

Do any of you guys have any recommendations on a
good base antenna for a handheld CB radio?
I use a 120 to 12vDC converter so I can use
my Midland ProSport XL CB as a base unit.
Right now, I just use a large(30 in) "rubber duck"
antenna which says that it will increase range by 50%!
Unfortunately, that's not the way it works.
Thanks in advance for any help.

Thomas

Bro, you couldn't have said better. I have been inspected (Ham Station)
that the CATV (Cable Co) suspected of causing problems (2 Meters and
Channel 18 (HBO) are one and the same) so the Cable Folks called the FCC
to do an inspection for interference I was causing (The Cable TV Co
just knew I had a radio). The FCC guy came to my house with several of
the Cable People and indentified himself by showing me his credentials.
I knew what the game was at that point since I have had some complaints
about "messing up" HBO with my radios. The Fcc Guy had me make a
contact on 2 meters and ran a spectrum anlysis on my signal and asked my
what power I was running (5watts) and he asked me to use my highest

power setting which is 50 watts. He looked over my license, made a phone call and then told me my equipment was within legal tolerance (Something I already knew). At that time I showed the FCC Inspector the Channel 18 birdie leaking off at 145.250MHz ant which time he inspected the Cable Co and found thier cables in my "Hood" to be leaking too much signal into freespace. After traveling around with Mr. FCC and showing him the points of ingress and egress for signal leakage, he proceeded back to my house where he summoned the "Chief" Cable Guy and told him of his findings. Mr. Cable Guy acted stupid and wanted a recheck, at that point Mr. FCC told him to get his supervisor here at which time Mr. "Chief" Cable Guy balked until the Mr. FCC told him the he was going to order the system shutdown due to leakage in the Aircraft and Amateur Bands. The Owner of the Cable system was over there in about 5 minutes out of his office. Mr. Owner started to argue until Mr. FCC stated in no uncertain terms he wanted this fixed immediately. Mr. Owner balked until Mr. FCC stated he calling the Districr Engineer.
Mr. Engineer stated over the speaker phone to NAL the Cable Co for the Amount of $1,500.00 and give them 3 days to repair the problem. After the 3 days, Mr. Fcc showed up again and asked if I could hear a 145.250MHz birdie and I demonstrated what was present at that time, only a low signal. I transmitted on HF and 2 meters and was not heard on the cable system.

The cable system tried everywhichway to place the blame on me and when the FCC guy verified it was their problem, Cable was not happy since it cost them over $20,000 to put in new cable, repair fittings and ground the system.

Moral of the Story:
Try to stay legal because the cable and phone Cos. don't know anything about radios and will let someone else take the blame for their problem. You never know.   I had some idea this inspection would have happened since the Cable Co thought an FCC isnpection would be to their advantage (the cable co just knew it was an "illegal" radio) to force an inspection. Since then I have become chummy with my FCC to learn what makes them tick, what makes them happy and how to avoid problems.

LESSON LEARNED: Don't mess up in your "HOOD" because if the complaint factor reaches critical mass (lots of neighbors and an occasional politician) the FCC will be goaded into action. (Never goad 3 letter federal agencies into action, they tend to over react)

Hello to all.
I'm looking for this little tunable FM transmitter (87-108 MHz)that
was made in the late 1960's by Kinematix, model number "IMP II".
It's 3 x 1-1/8 x 2-3/4 in size.
It's black and has a slide power switch on the front.
A microphone could also be plugged into the top. It was tuned
with a plastic tuning tool.  This gem is in the 1967 Lafayette
Radio catalog for $39.95.
Does anyone out there have one of these at the bottom of a draw?
If so, and if it's in working order I'd like to buy it from you.
Let me know how much you want for it.
Please e-mail me direct at:    mrusso@hoflink.com
THANKS, Mark N2FLF

The question as to determine where the problem is occurring would be answered after he grounds the station, because if it is static from the carpet he will still get a zing when he touches the rig, assuming the electrical panel is properly bonded to earth ground, as it "should" be then you can go to the ground screw of an electrical outlet to see if the static or electrical charge is coming from the rig or from you rubbing your feet on the carpet, Me personally I would try to go either to the earth with either a 6' minimum ground rod or determine whether or not the water pipes in the building are PVC or copper, you can check to see when the building was built and then check local codes to see if they allowed PVC in the building for plumbing, If the building is really old then you can safely assume that the building was plumbed in galvanized pipe, but just check with the city codes and go from there.
Good luck
-=PEAKABOO=-

Man ignore these people that offer no help, what has probably happened was
```

the amplifier went into oscillation due to a mismatch at the antenna. this caused the amp to stay "keyed up". if you have seen major smoked than there is a lot more damaged then the transistors, there is even a good chance you might not have damaged any transistors., but very possible. My point is if you replaced the transistor this will not fix your problem, and as far as a "transistor tester" this is a crock you dont need a $400 dollar transistor checker (whatever that is) but it require some explaining to understand how to test them with a VOM, any way you have damaged more than just transistors if you have seen a lot of smoke, replacing the pills is just the tip of the iceberg. Where are you located? E-Mail me and I can help you in more detail.

Hello Randall161: No I don't want to be a a$$ hole. Your the one who posted a typical unfriendly posting to CB'ers, not me. All your posting said was enforcement subject matter, and not one word of friendly advice or welcome to the ham community, ect. And probably just like all the rest, in like a lion, and out like lamb.

We see a lot of snotty and unfriendly postings of this sort, on the rec.radio.cb newsgroup. Pity!

Do you really think the problems of the ham and CB radio services will be solved by your postings. I don't think so. Its the same thing I saw when I was a kid in school. The whiners and tattlers, they don't make statues of guys like that, now do they.

This is what you e-mailed me:

Subject: Re: Re; 10 meters

Yes i have listened to my CB lately. I listen and talk on it every time i get a chance between school and work. In my area we don't have the problem you're talkin about. You can tell a HAM operator in this newsgroup cuz they insult CBers in thier posts. And then you have the people who post these FCC stories that you don't even know if any of it is true. Who else would post them and why would they? To TRY to scare CBers. But i don't see why HAMS have to come into this
newsgroup and raise hell about this. Its not like personal communications systems were made for compitition. If the HAMS don't like the over modulated, over powered CBers then they should get off the band and get back to the band they were on in the first place. I agree that the childish anitcs are getting out of control and i'm tired of it too like on channels with heavy skip.

IMO, pulling TR24 is not a waste of time. The use of a power mic is just as splattering as pulliing TR24. Now if the application is used in conjunction, you would have a very over-modulated radio. TR24 pulled completes the whole by-pass of the AMC circuitry to enhance the stock GrantXL/Cobra 148GTL mics. The audio (I hope we can all agree on this) from these stock mics (and the replacement mics too) are excellent because the mic element is between 600 and 700 ohms.

Putting a power mic to this radio is a waste of money IMO. And with the see-saw effect of more swing, less modulation, the over-modulating GrantXL/Cobra 148GTL can sound louder and clearer with a simple mod of enhancing the PEP swing to 25 watts than using a minute watt swinging over-modulated (dirty) unit with a power mic.

It can be done. I've done it and my guys are happy with their units as well.

My couple of pennies...

137

Rick

So far 50% of the replies I have gotten have been in support of My feelings.
Thank You for Seeing thru all of the crap.
I have Mostly Yaesu FT-101 equipment and accessories.
I have a Ft-101B, 101, 101E,101EE, Books, Manuals, plus most of the
Accessories
that go with Them.
Are You interested ?
What do You have to trade ?
I have a 366 Pentium now, but want to set up a second System or get a Camera

and Writeable CD.

Let Me know.

Thank you

Mike

I don't know if I'd go quite that far...
But they are in my opinion they are the cheeseiest out there.
I still can't get over the amp he sells that has the heat sink on the inside! Brilliant huh...

Gary Danaher (gdanaher@flash.net) wrote:
: Third floor or not, you have to ground that thing!

I know I asked this a while ago, but I wasn't sure what was the best thing to do, out of all the responses I got. One suggestion was to ground it to the screw of a power outlet, but that would introduce electrical noise into the radio and vice versa. Grounding to a water pipe seems to be the next thing to do...I'm not sure if this will work though.

This helps the static electricity, but it doesn't address the need to properly ground. Groundin gto the cold water pipe would beat nothing if the water pipe actually gets out beyond the building some distance, but they often connect to plastic and don't work well. Any chance of dropping a stealth wire out the window to the ground??

if cb were abolished like some people would have, there would have been no
radio to warn anyone with anyway.
just because the IDIOT was using power is irrelivant. he could have been
barefoot and right behind the trucker and still could have caused enough
interferance to get the same effect.
VERY TRUE the guy was an IDIOT but power was not nessessarily at fault.
if caught, he should be charged with willfull interferance AND, in civil court,
be charged with neglegance in causing a death. what ever the case, it shouldn't
have happened.

Use a shorter cable while you are tunning up. the 200ft of cable will mask
changes in the VSWR.

Depends on who you talk to.... Some people want you to beleive that
it'll do 500-600 on a deadkey... which IMHO is a bunch of BULL..

If it's driven the way it's supposed to be, and not all tight and
stuff 300 swinging to 500 is about normal for a 4 pill box.

"ham" rules are neither here nor there with me as i have no interest in
learning the code. my interests lie in hf communications of which i'm locked
out of because of a license requirement for a mode of communications that has
long out lived it's usefullness.
yes, i've heard many say, "in case of mic. failure, you can always tap out the
code".
this is true but in the last 70 years, they've come a long way in microphone
technology and they really are much more dependable since the days of the
carbon crystal mics. this arguement sounds like the paranoid cries of a dooms
day survivalist.

>>if the itu / fcc would drop the code requirement altogether, it WOULD be

>would
>>to buy a uhf / vhf rig.
>
>Yeah, right, and then 10 meters could sound like The Bowl? No thanks.
>
would you tell your tech plus friends this when they also, in some cases, use
modified cb's for 10 meters?
what does these radios and there legal use on 10 meters have to do with the
bowl? if modified properly for spectral purity, a cb is just as good as any qrp
ham rig. in some cases, they have the same circuitry.
i have a uniden pro 810-e and a president 2510 which, as far as am / ssb, are

almost identical inside. i can do the same power mods to the 810-e as can be
done with the 2510 with the exception of the power supply in the 810-e would
have to be beefed up dramatically.
if i were to change the crystals in it's crystal kit, it would make a great 10
meter ssb qrp base at a non-parts modified 20 watts pep that it puts out now.
please don't cloud the issue.

>

>Yeah, right, just like they did on the CB band.
>
it wouldn't be the same because the ones who respect their licenses would
conform to the rules and the ones who don't would get shut down because
enforcement is much more strict on the ham bands. i've heard the same stuff
about stricter enforcement on 11 meters but i've also heard this many times
before. they come out until the dust settles and go home and it all starts over
again.

>

>
>
i am aware of the no-code tech license but there are people like me with no
interest in comms above 50 mhz or the 2 meter cb band.
i can go to a yard sale almost any weekend and pick up an ssb cb for under
$25.00 and be on 10 meters in an afternoon at no cost considering the size of
my "junk box".
i don't talk on 10 but i do monitor and, to tell you the truth, haven't heard
any conversations that i'd be interested in joining. i know that, at times,
i've used "colorfull" language here to get my point across but i'm not that way
on the air but some of the stuff that i hear on ten has valium beat in the

sleeping pill department hands down.
>
>>a kind of middle ground for people who want more than cb but less than ham.

>
>
as i said before, i have no interest in vhf / uhf comms.
i've been in and around 11 meters since 1972 and am still perfectly content
with it.
>The power limit on 6m for Technicians is 1500 watts PEP, by the way.
>
>
if i were interested in generating that much power, i could do it on 11 meters.
the "legal limit" for tech at the no-code level has no draw for me.

>In addition to that, you get to work VHF/UHF FM repeaters and simplex,
>or operate your own repeater station when you get bored with using
>someone else's. You can try working DX by bouncing your signals off
>the moon (know as EME for Earth-Moon-Earth), or off meteors (known as
>meteor scatter). You can try slow-scan TV or ATV. You can also try

>
>
i'm sure that these modes and paths are interesting for some but, again, not me
thank you.

>
>Of course, if all you want to do is chat locally on AM with some
>friends, that's fine too, as long as you all have the appropriate
>license and operate within the FCC rules.
>
i do that now. it's just not what some would consider "witthin the rules".
mostly, my interests lie in ssb.
the only difference between me and a "legal" ham is the frequencys used and a
piece of paper.
i, unlike some others, am proud of my equipment and make great efforts to keep
my radios spectrally pure.
i get hours of entainment at the challenge of obtaining, modifing, and
maintaing my radios in top shape.
i don't take the easy way out and buy already "good" radios and do the simple
jumper-block mods, i buy cheap yard sale left overs and turn them into
something really good or it becomes junk box fodder.

>
>So, what more do you want? A free pass to turn a few more MHz of the

>Bowl and get a Tech license. The test is not that difficult, and the
>privileges you earn when you qualify for that license are well worth
>playing by the rules in order to keep 'em.
>
>
if it were up to me, i wouldn't turn "a few more mhz of spectrum into the bowl".
all that i would like to see is a 450 khz piece either above or below cb turned into a LICENCED area with the associated privledges for experimenation purposes for those who don't want to be a ham. 200 or 300 watt limit, am, fm, ssb mode, a technical test and the same enforcement as hams.
you could almost call it a "learners permit" for a ham license. some people would get tired of the limited spectrum, power and modes and, by then, maybe have enough respect for what a license means and would upgrade the way a novice would go tech plus, to tech, to general to extra.
it could be actually one class LOWER than novice for those who don't want to go all out for "full ham".
my wife has no interest in learning the code either but would like to have more dependable local comms. than cb offers. it could also be considered a higher powered version of FRS. the 2 mile at best FRS just doesn't cut it in some cases. these may be good for flea markets and malls but i travel farther than that and she is home.
for her, all she needs is basically a higher powered cb and would be willing to pass a minor technicalo test to get such a licence. the 4 watt limit was great in the begining but is usless now not only because of the real idiots but also of the shear numbers of "legal" cb's in use with the advent of cheaper technology and the upswing of the new solar cycle.

>Of course, if you can't obey rules, then just stay down there on The
>Bowl and keep getting squashed by the other overpowered, overmodulated
>birdbrains with nothing important to say and a lot of wasted equipment
>to say it on to people who are too busy running their own mouths to
>listen anyway.
>
>
if the license that i proposed were to exist, i wouldn't have to put up with the bowl either and a lot more cb'ers wouldn't have to put up with a lot of the crap that they have to put up with now as more people,(not all), would go for the license so they wouldn't have to look over their shoulder for uncle charley as the price to pay for more power or quieter channels.
this is why cb'ers have, and still do go over to ham but "all out" ham just isn't for everybody.
have a good day.
jeff

i work in a warehouse that ships our product world wide by truck only to boat docks, across continental / national boarders etc.
you'd be suprized at some of the junk radios that these truckers hook up to these "10kw" antennas.
the antennas cost more than the radio did new and most don't even OWN an amp.
if i had a swastica flag hanging from my front door, it wouldn't mean that any illegal activities were going on inside.
some of these truckers care more about the looks of there trucks than they care about their onw health.
there is no law against vanity run wild and i seriously doubt that any federal judge would risk looking foolish by issuing a warrant to bust a 2 watt junker just on the looks of an antenna and yes the fcc does need field strength readings, key signature or voice prints to back their case.
otherwise there could be laws made for being ugly which would be the case here.
a 7 foot firestick can easily handle 1.5kw but is this justification for the inconvienance of a search?
i don't think that would hold up on an appeal. worse things have gotten by on this technicality.
worse yet, if it didn't hold up, the fcc would be open for a malicious prosecution suit.
they can't afford to do their jobs now let alone defend a suit over an "ugly" antenna.
think about it.

well there are different degrees of punishment, just like there are differing degrees of reward. you are virtuous in your own mind , but you are not good enough to meet a perfect God some day when you die. He hates sin. a good virtuous man will go to hell without being covered with the blood of Jesus Christ, but it won't be as bad for him as say a serial killer who dies with these unconfessed sins in his book of life. when adam sinned he condemned us all , and only the blood of Jesus will save you from spiritual death. If Adam had not sinned there would be no death and a lot of people would be living in the world in peace. There would be no sin of any kind. The blood of Jesus blinds God to a believer's sins. we are spirits living in a body that dies but your spirit lives forever. if you know anything about Jewish traditions, this was patterned by God , after the Jewish tradition of sacrificing an innocent , unblemished lamb for the atonement of sins of Israel. So Jesus, the Son of God gave up his life willingly on a Roman cross as a way for God to allow us to be reconciled to him, because we could not and would not do it according to the law. There is only one God and there is only on way to God. Jesus did not replace the law but fulfilled it. He was the only one that came and said that He was the son of God, did miracles and arose from the dead. No other man ever did these things. He was God in a human body. He did the things he did to teach us the way. Jesus was our unblemished Lamb. it is up to us to accept this. That being said, it is necessary to say that we all have a will. The angelic host do not understand this. They were manufactured beings for the express purpose of worshiping God. We have a will and we have a spirit. The angelic host marvel at our options. Who so ever will may come. It is up to you. I know this and always have. I was raised in a church family. I wondered and I came home. It is possible to live your life according to Godly principles and everything will work for you but you will end up in hell , just the same. Godly principles such as virtuous living and living according to the law do not save you . It is confession of faith in Jesus Christ that saves you and not ourselves. I believe this with all my heart. I am not perfect and I do not claim to be. But the time is coming when such words as I am saying now , will cost me my life. Maybe it will come to this sooner than I anticipate. I

I was wondering if anyone knew any great pages that explain some of the
CB slang. If anyone could email me at: Ollyman@webtv.net with some pages
or with some of the slang they know. that would be cool. thanx

If you refuse, then there is *no* need for an inspection. You're then guilty of violating the conditions of your license. They have you either way, Bill. Pay up.

Back to the CIB web page:

Q: The FCC Agent standing at my door does not have a search warrant, so I don't have to let him in, right?

A: Wrong. Search warrants are needed for entry involving criminal matters. One of the requirements as a licensee, or non-licensee subject to the Commission's Rules, is to allow inspection of your radio equipment by FCC personnel. Whether you operate an amateur station or any other radio device, your authorization from the Commission comes with the obligation to allow inspection. Even radio stations licensed under a "blanket" rule or approval, such as Citizen's Band (CB) Radio, are subject to the Commission's inspection requirement.

The Superbowl (channel 6) as it is called has been called that since around
1965.
It is called that simply because it is a COMPETITION CHANNEL. And it is ONLY
for those that have a very serious interest in power and competition. If you
are a regular cb user with a small amp or none at all I would strongly suggest
you avoid channel 6 and play on any of the other 39 channels. That would be
best since you would not be heard on the SUPERBOWL!!!!!

I believe Two Watt and Monkey make very short antennas. Maybe 4 feet!! I know for a fact that Stargun makes some of the shortest coiled antennas that can take the heat. However I have always had a problem tuning the real short coils on the roof of a van. I don' t know where you are putting you antenna!!!

Question Toll....
What about the 3 coiled antennas??? Do they work in the same theory? I have seen a couple of the three coiled antennas in my time and I thought they were just for show. What do you think?

In the cases publicized here in Hawaii, a US deputy marshal accompanies
the FCC agent, and it's the marshal who forces entry. Latest case was
a pirate broadcaster. The marshal cut through the locks. The bad guy
lost all his equipment, including even the antenna and feed-line.

Well it's been a long time so let's see....
I think they should be approx 6 feet apart and tune the front antenna first and then place it in the back and then stick another antenna in the front and tune it. Front antenna should be apprx 5% shorter than back antenna.
More specifics please try email as it is too long!!!

Yeah it does, cause you can't get across town when
the band is open; the "purpose" of the CB service is
for short range communication.

> That excuses deliberate
>interference with other stations?

How might we use, the words, "accidental" interference
with other stations?   Or better yet, you have fun trying
to ward off the mexicans that are all over the band.

> That excuses deliberately ignoring
>the legal power limit?

4 watts is not enough to get across town with a mobile
when the band is open.   I can barely get across town with 600W, the
mexicans will pulverize your signal.   On the legal 40 band 4 watts
ends up in a sea of mush with the rest of the signals.

>That excuses the use of profanity on the air?

No, assholes will be assholes. Nothing you or I can do to prevent
them from using profanity.

>>>is only one argument that really holds water. The code testing

I'm not talking just radios.   It takes a good parcel of land and a
tower or two get signals out there that would even be considered
useable.   Sure you can hang wires off trees but not everyone
has trees to hang wires off of.   You also need neighbors that are

about 100-200 feet away to eliminate or minimalize interference.
Even with the cleanest station, you WILL interfere with some of their
crap, that's inevitable with the cheap electronic junk thats around
in the consumer market. There is simply no escaping that. I can't
think of one ham that was able to get anything more than QRP out
without running into some type of interference problem.

>As far as antennas are concerned, you can buy a used antenna tuner at
>a hamfest, get a G5RV from MFJ for a whopping $30, add some coax feed
>line and some rope or other nonconducting support and you're ready to
>go on 80 through 10 meters for less than most CB antennas cost. Or if
>you're that strapped for cash, buy a roll of wire and build yourself a
>dipole.

Yeah, and on 10-20 meters you basically have a mediocre
signal.   40 and 80 work better, but the lightning crashes will
kill 100watt stations with aplomb.

Oh, and btw... G5RV = "antenna which works equally poorly on
all bands"   good for a pinch but it's nothing to brag
about.

>
>>with write in answers would be in order. There are lots of
>>technical folks, engineers, smart people, etc, that want to get into
>>HF amateur radio but the code is a significant barrier to them.
>
>Yeah, I understand that. Unfortunately, the code is also a significant
>barrier to the CB operators who can't be bothered with things like
>rules. This is a reflection of society - the many suffer because of
>the actions of the few.
>
>>Again, for the bands supplied the amateur rules are not unreasonable.
>>For the CB part 95 is VERY unreasonable given the circumstances.
>
>What is unreasonable about expecting people to operate ONLY on the
>frequencies authorized by the rules?

Because skywave prohibits reliable local communication. Even those of us who do not wish to use skywave are exposed to it. It is unreasonable to expect folks to stay within the allocated band.

Perhaps you dont understand, there are no more OPTIONS for the public to use reliable short range communication at modest cost.

And dont say GMRS, cause that's the biggest load of shit radio service I've ever heard of. The licensing fees are astronomical and the limitations imposed on the liscense are horrible, making it very usless.

FRS is a neat idea but its "short range" is much shorter than the range one could attain on the CB band with perfectly legal equipment. (on a quiet day)

>
>What is unreasonable about expecting people to avoid deliberately
>interfering with other stations?

Well, in order to prevent interference while the band is open, your basically telling people that they could not operate their cb radios, legal or otherwise? Who gets to choose who operates and who doesnt? Are we going to have some kind of a lottery which determines what stations can use what channels when the band is open?

>
>What is unreasonable about expecting people to stay within the legal
>power limits for the mode they are operating in?

I'm not going

>
>What is unreasonable about wanting people to avoid using profanity on
>the airwaves?
>

Theres nothing unreasonable about this, but this is common sense and has nothing to do with part 95, really, this is a social issue more than anything else.

>What does the limitation on communicating with stations beyond a
>certain distance from your own station have to do with the moron who
>keys up with 500 watts on someone else's QSO and starts retransmitting
>a broadcast station's music programming?

>What do prevailing propagation conditions on the 11 meter band have to
>do with the morons who break into a friendly conversation between two
>people they don't even know for the purpose of calling names and
>obscenities at the participants?

>Even if I agree with you in considering the distance limitation to be
>unreasonable, that does not render the rest of Part 95 any less valid.
>You cannot use your opinion of that particular provision in Part 95 as
>justification to ignore the rest of Part 95 right along with it.
>
>>As far as the assholes are concerned they always will be there, not
>>much you can do about them aside from stomp on them or ignore
>>them.   Ever listen to 75/80M on a random night?   Theres always at
>>least one frequency that has "problems" on it.   (Every night it's
>>3.950, and other frequencies at random)
>
>The problems on 80m are the subject of a current enforcement action by
>the FCC. So, you see, there *is* something that can be done about
>them. Like the old saying goes, "If you're not part of the solution,
>you're part of the problem."

Yeah, the FCC canned the licensed jammers who publicly announced (and identified themselves) that they were jamming the frequency. That took a real lot of skill, hell, some of them are STILL OUT THERE jamming various frequencies.

So you really mean, a PREVIOUS enforcement action. They canned some of the 3950 dweebs like sidney,etc..and then they harassed K1MAN and W1WCR and other folks for no logical reason other than out of internal prejudice by mr hollingsworth.

>Want to get rid of them on the CB band? Start sending in complaints
>about illegal operation to the FCC. Gather your evidence first - make
>tape recordings of the offenses as they are happening, while others
>track down the offending party and note field strength readings and
>results of radio direction finding efforts, and then you send a letter
>to the violator advising him or her that if they do not clean up their
>act, a complaint will be filed with the FCC.

What kinda crack are you on? I want some.   The FCC DOES NOT CARE
about CB violation complaints, period.   We had 50 man petitons, tape

recordings, etc, to get people off the air, never worked.   People
gave up.

>If they continue to operate contrary to Part 95, complain to the FCC
>and supply them with your evidence.

Again, stop smoking that crack, John.   This doesnt work, please
enlighten me and show me more than one instance in east bumcrap
where this actually worked.   You seem to forget that there are 4
million plus CB operators....   lets say 200,000 of them are real
assholes/problem kiddies. Well, so far, about 100 have been busted.
That's not very effective enforcement.

Oh, and out of that 100, probably 70 of those guys were doing
something else to piss the FCC off, namely things like bleeding
over police or other public safety radio services.   I could run 10K
on the CB all day.   I could run it till I turn old and grey and
die, and not get caught.   I WILL get caught if I ran that 10K next
to a police station or in the vicinity of other public safety radio
systems. The FCC takes quick and effective action on these
kinds of calls.

>
>That's how it works on the ham bands, and that's how it could work on
>the CB band if enough people were willing to get off their butts and
>do it instead of whining about it and doing nothing.

Doesnt work on the ham bands. Apparently you seem to forget that
jamming persists on 75/80M at night, on various frequencies.   20M
during the day ends up turning into a kiddie band sometimes
too.

>
>>And they don't have the choice to discriminate, either, because
>>that too is illegal!
>
>Ah, but they DO have the choice to require that the applicant
>demonstrate that they are qualified for the necessary license, by

>passing the written and/or code proficiency testing mandated by FCC
>for the license class being applied for. In fact, it's not even a
>choice - it's right in Part 97 that they are REQUIRED to do so!
>

>>Most of the true assholes on the CB don't even know what it takes
>>to get a ham license, period.   Most of them couldn't pass
>>the tech no code test.
>
>Well, at least we agree on something! However, why entrust such
>individuals with any further HF privileges, in light of what they have
>done to the CB band? That is the point I am trying to make here,
>whether you understand it or not. I got my ham ticket to get away from
>people like that. I certainly don't want them to follow me onto the
>ham bands, now do I? And neither do any other hams I know...so why
>would we want to make it any easier than it already is for those
>morons to get a license?

They wouldnt follow you onto the ham band.   They have no
interest in it.   I could hand out extra class HF tickets to about a
dozen cbers right now and all but 3 of them would stay on
27 mhz.

Please remember, that any joe off the street could get an HF radio
and start talking on the HF amateur bands.   The equipment is
readily availiable.   Why arent all the "cbers" there?   Well, guess
what, their friends dont have money for HF rigs.   the existing users
are pretty passive to jamming attempts, etc, etc, etc.   It's harder
to get HF mobile antennas for "longer" bands runnign correctly
and so forth.   The know-how and capital is just significantly
more.   It's unknown terrirtory and most cbers dont want to explore
it because they're simply not familiar with it.

You must remember that the radio hobby as a whole is decreasing
in popularity.   Eventually (and possibly unfortunately) amateur
radio will end up becoming deregulated due to lack of interest, unless
the ARRL rolls out a big red carpet and has a parade.   As far as the
public is concerned, all amateur radio is, is a hyped up version of
the CB service.

You know why the ARRL brought on no code?   To prevent radio
as a hobby from dying.   They need to open the doors fully otherwise
there will be NO regulation whatsoever, due to the fact that the
general interest in radio is decreasing.   This is true both on the

CB and Amateur radio side of the coins.   The saturation will hit an
all time low and both groups will be able to exist peacefully in a
deregulated state because of the sheer lack of population..

You know what is interesting, though?   With the advent of computers
and internet access becoming cheap, the assholes of all radio services
are migrating onto the internet en masse.   So far many of the

assholes that were on the CB in this area picked up a computer and hopped on AOL. Computers are too easy to use these days so even an illiterate, welfare collecting cb operator can get online and harass people in chat rooms. Also, in the near future assholes will have other means of annoying people as opposed to a CB radio.... with DSS radio systems, having a "cb style" trunked communications system isn't a far fetched idea. Actually its happening now in a controlled sense.... but I wouldnt be surprised if nextel starts opening up "public" channels for driver information,etc, which will turn into a zoo.

Instead of bragging about the chrome on their radios or their roger beeps they brag about what kind of junk is in their computer and so forth. So they come on here and play people like "rfenforcer" and other dorks.

Who will be left on CB or amateur radio? the folks who love to use it to communicate and experiment with.... In the most absolute sense, the communications that CB and amateur operators use to communicate are based on seemingly ancient, antiquated technology. The people left with the big stuff will be the antique collectors of hobbyist communication.... everything commercial and military is about 10 times higher on the techology ladder then any recreational communications are. The pheds have been dicing and slicing signals in ways that 95% of most people are not even remotely aware of. Commercial entities such as motorola have been digitizing crap for the longest time. None of these advanced technologies ever make it to amateur radio. It used to be hams invented technologies but that period of ingenuity seems to have died a long time ago, with the last vestige being the smelly slow assed packet radio network which was usurped by even half baked satellite data rigs or LEOs .....

I think there will still be some retards around but the die hards who are still around. Nothing stops those who are persistent. They will have more than enough power to slap the retards off theair or they will get in shape. I estimate there may be some folks that will still be festering around the regular 26-27 mhz band at large but membership will go down in a chain reaction. then level off again for a very long time. Truckers and people who work with vehicles, etc, will still use the CB as a source of highway information and so on, merely because it's been accepted practice. (unless something like a common DSS channel on portable fones replaces channel 19.....)

-Mike

All i ever here is "the FCC want to crack down on illegal 10KW amps"
I really don't understand. What is the FCC. Is there anyone who
can tell me what FCC means. Also, cheers the person who gave me
2 SD 123'S E-mail address. Anyway, thanks

        Matt!

Well first of all, you don't need to worry about the FCC where you are
Matthew. The Federal Communications Commision is a bureaucracy that because
of our increasingly socialistic government, is really starting to get the
funding and power that it craves. Down with freedom.
You are safe in the UK.   for now hehehehehe!

>

Trent,

You are correct. GSP is not obligated to comply with 40-14-8. However,
that only applies to RADAR enforcement. The 63 in a 55 was a valid
citation. But as you know from my previous post, That's just slightly over
the minimum that I'd recommend writing a citation for. Years ago, I was
written a citation for 68 in a 55 by a West Virginia Highway Patrolman. I
argued that I was going down hill and the speed got a little away from me.
(didn't work) :-)) That one cost me $25.00.

Regards,

Arnie -

I was being facetious when I asked about a CB License.

The point I was trying to make, has nothing to do with me personally. I know that my ham license covers me. I'm concerned about the LEGAL CB operators, that have no license, but do their best to run legally. THOSE people can still be harrassed by overzealous cops that do not know how to isolate interference complaints, and assume that EVERY operator that causes interference HAS to be illegal. These legal operators still face equipment confiscation, legal hassles, and spent money trying to "defend" their hobby, and to retrieve wrongfully seized equipment, without due process.

I have no problem with law enforcement confiscating PROVEN illegal(which would require some technical expertise) equipment. I DO have a problem with a "seize first, make them prove it isn't illegal" approach.

Dave

I just aquired a brand new AS Star duster never used yet and I just opened the box for the first time and noticed that it has a piece that is missing , I need the plastic that holds the radial on the ground plane section , this mounts on a strut coming out from the mastpipe . I had one and gave all my parts to a gentalmen on trade.

This is UNreal !

I was in the field @ a customer's antenna & had Debby type this SIMPLE question. ALL I want to know is: ON AN OHMMETER WHAT is the resistance between the outside of the coax connector to the inside pin on a big stick?! NO ONE did give me an answer! Maybe I didn't ask the question right to begin with. This is NOT a hard technical question, you geeks!   I guess the answer is LOW ohms because of a coil, or 10k which I am getting. I don't have a new one here to check that is the same thing. BoB YOU are the crack head! Say NO to drugs you cia drug runner! IF anyone can give me the answer, please E mail me FAST!   Thanks!!! Dave!!!!!!

Sorry about that Bob--I must be 1/2 asleep! I read your response again & realized that Adrian was the dork, & you are the "crack Baby" !!!   Actually "crack" or drugs or Alchohol was the cause of NO metal base station antennas being made today (5/8 wave). These drunks & druggies in the late 70's were getting smashed & put up base antennas & hit power wires & the lawyers & insurance companies came up with this communist law form called "product liability" that caused us to not have these US made 5/8 wave metal base antennas (unless you got Underground ones!). I guess the answer to the question is 10 OHMS or less on the Ohmmeter, which is NOT what I have, so it is bad! Thanks !!!! Dave!!!!

Arthur your intuitiveness leads me to believe that your not a ham because your comments are absolutely correct. Be careful though, like me, you'll be getting 3 emails an hour from these screaming genius's.

I can just imagine how many phone calls the FCC gets from these guys complaining about the people on this NG every day.

Hello John;

Your wasting your time on him John. He's to the point of doing anything and everything he can to avoid being proven wrong. He's resorted to name calling, trying to pull the thread off subject several times and point blank avoiding the subject of the thread. If nothing else hopefully this subject has a least caused a few readers to question what they assumed as "fact" before.

What kind of NONsense is this? The more coils the antenna has, the more
paper money is radiated out of your pocket towaards the antenna company!!!
2 or 34 coils IS a SCAM !!!! Put the coil @ the top where it gets out
better!!!!
Dave!!!!

Radio shack has a small wireless mic that plays via FM radio that might =
work for you.  Also try ALL electronics in Los Angeles on Vermont =
Street, they have a web page but you will have to do a search.
Good Luck

>The FCC Inspector does NOT have Police Powers, and needs a Federal
>Marshal,...to provide Police Powers to conduct entry and sezure actions.

It's always wise to have a uniform present to avoid confusion when serving a
warrant or making a scheduled arrest. Local cops here are required to do so,
even when plainclothes cops are serving the warrant. "Police powers" are not
always necessary in entering a building when serving a warrant. In Arizona
(and most states) private citizens can and do enter buildings to serve
warrants. They're commonly called "bounty hunters". (Also, private citizens
(here) can arrest for most felonies and some misdemeanors in progress.)

>If he is refused entry, he can have the License Revoked, and Fine
>or Forfeture Imposed, but these are all after the fact penalties,

Which is why I wouldn't suggest that a ham refuse entry to the FCC, unless of course he's going to lose all that anyway by letting them in...

>[if] that there is Probable Cause that a
>Violation is currently happening or has happened in the very recent
>past, then the Enforcemnt Officer does the entry and it is by His
>authority that any search and or sezure takes place,

Entering a building to stop a felony in progress would be an exception to requiring a warrant. However it is usually used where injury to people or destruction of property is in progress. I think it's pretty unlikely that the average ham or CB'er will have his door kicked down these days, especially in light of the current toothless FCC letter writing campaign...

As to the average ham (who is not holding a hot mike) and finds the FCC at his door, absent a warrant, he *can* refuse entry. If the inspector forces his way in, I would advise him not to resist. Any evidence gained in an illegal search will likely be supressed.

>Bruce (semiretired powderman & exFCC Field Inspector for Southeastern
>Alaska)

The "warrant-free searches" (wink wink) for real cops were better in the old days too...

I hope the cycle hasn't peaked so low,but it may have .The smoothed
monthly sunspot # not only stopped climbing for the first time since the
cycle started last month but actually took a slight downturn.Any time a
cycle stops climbing it may have peaked,only time will tell.

Rick Sprader wrote:

I have a Cherokee CM-10 in my car now that I really like. It is small, has freq. counter, can be modified for 600 channels, DW, scan, battery voltage meter. I bought mine thru Bill's2way. The URL is http://Bills2way.com. They run $89.88. He charges $35 for the channel mod and peak and tune.

If you like sideband, the Uniden PC122XL is a good one at around $100. Ive got the Grant XL, Which is an excellent radio, but it costs around $130 at the cheapest.

Buy it from your LOCAL CB store (Alan Jackson's Little Man). Get a Pro-510
uniden around $50 & a $30 3' magnet mount. Then you'll have the best under
$100, unless you can get a PC-66 or 68 & antenna for $100.
Dave   (20 years a "Little Man" CB shop).

Guess again. I have personally argued the jurisdiction point with two city attorneys and the the District Attorney when a local judge signed a search warrant on a Ham and CB operator, which fell on deaf ears. All they said was "Hey, the judge signed it, it is legal." And "The F.C.C. has abdicated authority to the local officials." Local police in Green Bay WI, without the F.C.C. or Federal Marshall executed the warrant. All because a local alderman with help from a willing Detective Police Sergant wanted that person out of the neighborhood.

The police confiscated ham gear, CB radios, and even a personal stereo. None were returned. It wasn't until a few choice words (Lawsuit agains the City with apprpriate media coverage) were said to the then Mayor at lunch with his cronies did the harassment stop.

I just ran some shielded cable from the battery to the radio to get rid of any hint of noise that may be getting into my radio. I used Belden #14/2 shielded with a drain wire in the shield. My question is this. I ran from the battery (using a 15A inline fuse (radio is fused again with 4A with factory wiring harness) right at the battery and grounded the shield bleed wire at the battery ground jumper as well as the - wire. I know as an electrician to only ground the shield at one point to avoid creating a ground loop (antenna.) But this is the only place the radio is grounded. Did I do this right? The only other way would be to ground the shield at the radio but then I would have to ground the radio there too? and only be using the cable to transmit the + current? The only experience I have in using shielded cable is in smart fire alarm systems and the cable drain is always grounded at the power supply.   I'm only getting minimal engine noise but the main CPU for the car is right next to the battery and I don't think that zero engine noise is possible. The noise blocker on the radio totally eliminates it now under all conditions.   Should I be happy with this or should I terminate the cable in a different way?

Jim

Thank you Bill for the post. It goes to show that there are a few good people out there after all.
You see the sport in what we are doing even though you don't agree. But that is fine.
There have been some real nasty e-mails going around from some Ham dude that is out to get CB'ers and I agree with you on frequency is frequency. It does not matter where you transmit. We are all equal and we need to just get along or take our toys and go play in our own sandboxes.

I have a TexasRanger 696F base for sale. It is 6 months old and has
maybe 10 hours of talktime on it. It is modified with extras and a has a
doorbell. Radio is practically new. I have almost 400 dollars invested.
I will sacrifice it at 250 dollars. I just bought a new radio and dont
need it. Buyer pays shipping. Thanks for looking at this ad. Please
Email me if interested.

It is rare that you will see anybody competing with an amp that has a bias other than grounded. even the X-force. not ragging on them in any way, its just that the majority of the people who run these "custom" built type amps by different builders usually drive the piss out of them and they are basically biased class c.

Dat 10 ohm smoke,
  Sure make you choke,
     Da more dat smoke,
        Da more ya broke,
           Damn dat 10 ohm smoke!!!!

Hey mudduck nobody wanted your opinion, its obvious that you dont know what
you are talking about. You must be reading a very old William Orr CB
handbook, next your going to tell me that Texas bugcatcher is a poor antenna
because it does not have the coil at the top.
Dave or Debby wrote in message <380c751f@news.planetc.com>...

I've got a Uniden 76XLW and have been quite happy with it for a several years now. Its a tough radio and exceptionally dependable. It works in winter subfreezing weather and in a sweltering mid-summer vehicle. Audio is excellent. I've coupled mind with an Astatic Road-Devil Mic. The stock mics are alright, but eventually you'll want to ditch it and get a powered one. People can understand you much better with one.

I wouldn't bother with a lower end radio like the 510xl. The 510 is a fine radio for one in its price range. I had one for a few months, but you get what you pay for. I didn't like the squelch on it. The slightest skip required I boost the squelch nearly 60%. It would also be annoying to have fringe discussions cut in and out.

The 76 has a more "feathered" squelch.. the squelch fades in and out softly, making high sunspot activity days more comfortable to the ears. I think just overall it has a better receive circuitry, at least that's been my observation from owning both radios.

Its also *extremely* convenient to have the built in SWR meter! The 510 doesn't have one. A SWR meter is a necessary piece of equipment, might as well have one in the radio.

Having access to the NOAA broadcasts has been pretty handy and I've come to decide they're indispensable for my personal uses. Get one with weather receive if you do 4x4 in the back country.

Having SSB would be useful for the power boost, and the PC122XL is in your price range, but I prefer having Weather channels, and there aren't many 11-meter radios with Weather receive AND SSB. (With the exception of the new Texas Ranger CBs and the Midland 79-290.. a radio I'm considering buying).

Of course, anyone here will tell you, your radio is only as good as the antenna you match it to. A good match is critical. Get a good antenna. No Radio Shack crap. What is the best mobile antenna is argued endlessly and I'm not touching that with an 11-meter pole!

Don't do what I did and "buy small" with limited equipment because you limit yourself to a budget. You'll find yourself spending more and more money as you upgrade (and believe me, you *will* want to...) and over time, you'll spend alot more money than you wanted to. Just get an excellent rig *now* and bite the cost. It will pay for itself in the long run.

I can recommend Bill's Two-Way for online shopping. The guy is a professional and upfront about shipping and costs. He's got the best prices on equipment I've found online. He's also got a well organized website that has information on many items he sells.

http://www.bills2way.com

Just an advice.. if you can, get your antenna locally. Shipping costs for antenna whips might be a real shocker. :)

Every body has their choice of what they wish to do, Some people like to talk side band and the ones who dont generally stay away from the so called sideband channels, And technically what some of them do I believe is illegal, is it not illegal to talk to a station more than a 150 miles away on a CB radio? the sidebanders do it all the time, kinda like the guys on channel 6, in other words their is a place where each person generally steers clear of because that particular place does not pertain to them, kinda like this news group and you.

Wait a minute what a bunch of bullshit.......

A coil does two things

1. allow you to run shorter antenna for the frequency in which you wish to operate.

2. Burn up rf energy that you could be putting in the atmosphere.(inefficient pieces of shit)

coils are pretty much useless othere than that so put thode girlieman antennas away and put up a resonant one on the frequency... Don't be stoooooopid........

Unidens are very reliable, I've had a pc76xl for several years, never a single problem. A coworker has a pro510xl and it sounds good for the $30 he paid for it. We matched up his antenna really well and his got out better than some of the guys I work with that have linears pushing through their high SWR setups.

Check these sites out, I have purchased from both. Also you can buy from Uniden I think too, http://www.uniden.com.

cb is great

amatures are great
but one is a dying breed of 2 meter stalls and cw blocks

i listen to the "RAGCHEWING" on the amature bands all
the time and the only difference between it and cb is the
distance you can cover.

there are intelligent and articulate coversations
there are no-minded uninformed ignoramuses
you can't have it all. you can only have some.

what i see here is a newsgroup that is its
own little society of classes.

you all have better things to be doing with
your time. SO GROW UP!!! stop speading
your tail feathers and enjoy what you are
capable of doing. get on the radio and
broadcast. give me something to listen
to.

I am producer for A&E and I am looking for someone with knowldege and a collection the CB radio during the seventies, the so called "trucker Era." If know someone or are someone who can help, then either call me at 818 755 4800 ext.124 or E-mail at rtatigian@wellergrossman.

This CB enthusaist must be in the southern California area, prefferably in the San Fernando Valley. The deadline for this show has come and gone and I need to get ahold of someone before the end of this week 10/22/99, or sooner. The name of the show is A&E Top Ten and the CB during the seventies is one of the Top ten Fads, it will be airing Sunday Nov. 21 at 4pm pacific 7pm eastern. Someone please pull me from the fire, and help me add more to our segment.

Thank You,

Robert Tatigian

So the guy was trying to pull a fast one, I have the papers here one the
3500 that's here and it has the very large heat sink on the back I say
around 6" wide and 3 1/2 high and the cw and variable power board was
installed by Clear channel. But that aside why would you put a low price on
a 100 watt one and on the group here I have seen 2510 2600 2950 and 148gtl
all going for more the only reason that I ask is I found a old qst book and
they have the AR-3500 100 watts in it going at the time for $700.00 us and
have not seen any 2510 or 2950 go for more the $350.00  so I just wanted to
ask you why OK..

its been my experience that in radio meters (regardless of what type) are never
as good as an external meter. there just a add on frill. not a serious meter.

How much heatsink is in the xforce x400 and how many inches in the davemades m400 ? Both cabinets are about the same size more importantly how many fins are they each using , don't be misled by just size the thickness of the plate and the amount of fins plays an important role. Far as i know davemade comp amps are class C and anything other than that can be custom made such as class ab-1, b, c, or even negative bias from what I was told. No noanmes are based on a totaly different design, The reason x force doesnt have any standing wavs is because the davemades don't, they use the same tuning , transformers etc, adding bias is not a major design change by any means. I have owned both and looked them over closely and ran them daily I didnt see a major differance in either one.

thanks wildcat, thanks a lot, you are very helpful and knowledgeable
about
these matters and that is most appreciated by members of this ng,
...........icm out.........

If you will all kindly take a close look at the header information,
particularly at the "Path" and "X-Trace" and "Message ID" information,
you'll see that these two messages originated at the same source on
primenet.com - in fact, the PATH information is identical for both of
these posts.

I thought at first that we had two jerks here, but on second thought,
it appears we have only one jerk using two different aliases.

73 and good DX'ing,
John D. Kasupski

Not to mention posting under two different aliases to make it look
like there is someone else around who's dumber than he is.

>a least caused a few readers to question what they assumed as "fact" before.

This was my intention at the outset, and I stated as much in one of my
posts. The idea here is to get people to find out the truth for
themselves from a REAL legal professional instead of listening to
outhouse lawyers on a newsgroup.

Free legal advice is worth exactly what you pay for it.

No...unlike most CBers, YOU are on CB because you are too DUMB to qualify for a ham ticket.

>on this group? hahahahahahahahaha go play with your HT!

Which one? I have three handheld transceivers. I also have two base rigs, and one mobile rig...not to mention two computers, six scanners, two HF receivers, a DSP, a preselector, two active antennas, three vertical antennas, a longwire antenna, and a receive preamp. I also have access to the club station which has three more computers, four HF rigs, a VHF rig, a UHF rig, and a 2m repeater station, and 14 antennas on two 100 foot towers.

Go play with your echo mic, loser.

The prices that you found are "manufacturers suggested retail prices".  The
```

actual street price for the 100 watt model was $400 when it was brand-new in
the box. Even 2510's could be bought as low as $179 at one point. I think
that these days a used AR-3500 100 watter in excellent condition is probably
able to sell at around $250. But I recently bought a very nice one for
$200. Rick

> Good post Bill. Try asking a technical question on the Ham newsgroups and see how many responses you'll get (most of the time the answer is zero). On the CB newsgroup you'll get several answers within minutes, and ironically most of them are answered by Hams.

I can go along with this to a certain degree.

> This illustrates me that they love being the teacher to those whom they feel they're superior to, and at the same time they don't like to share information amongst themselves because of some sort of embarrassment they may get from their own peers if they are proven wrong.

This I can't agree with at all.

The natural order of things tells us that the person asking the question is likely to be subordinant to the person answering the question as far as the specific subject is concerned--that's perfectly natural and shouldn't be seen as a negative.

As to the embarassment of being proven wrong by peers; learning from your peers is the nature of AMATEUR radio and is never seen as embarassing as it's the natural order of amateur radio. In other words, it's the duty of the more experienced to teach the less experienced. Again, it's simply the natural order of things.

Time for a crude representation of the antenna:

```
|
|        <- Antenna Shaft (~1/2 wavelength)
|
|
|
|
|
|
|
|
|
C
C___________________________ To Center pin on coax
C
C_______________________         To Shield on coax.
```

The "C" 's represent an inductor (Coiled wire). The center taps onto
to inductor somewhere in the middle. The bottom of the inductor
goes to the shield. As you can see, your Ohm meter's DC current
will just loop back through the inductor looking like a short circuit,
seeing very little resistance. However, feed an RF signal to this
setup, and RF doesn't just jump acrossed the inductor
ignoring the rest of the antenna. Anyway, I made this up, but it
sounds cool.

Bob.

Hello Matthew:

The Federal Communications Commission (FCC) is a US governmental body that administrates any and all uses of the airwaves. Unlike some countries in Europe which do not limit the amount of power a CB radio can transmit, the FCC limits the output of an amplitude modulated CB signal to 4 watts. This law was written more than 40 years ago when television interference was a problem here in the US because of the spectrum used for commercial television broadcasts. The advent of cable and digital TV has essentially eliminated this problem.

In addition, legal political lobbying groups such as the ARRL, which are comprised of mostly licensed Amateur radio operators have consistently used their "political action" funds to fuel politicians into rigorously enforcing these bygone laws, which our society has much larger problems to deal with, and putting any funds into enforcement for such nonsense would be better served towards quelling some of our larger societal problems. Most of our legislators have recognized this fact however every once in a while the smell of political action money unearths a few of these same lawmakers to propose a bill that would increase the penalties towards an illegal CB operator.

What you'll find on this newsgroup, are these same Ham radio operators who think that society is doing just fine and we should use our precious law enforcement personnel to track, fine or arrest those with their toy radios, instead of policing for drugs, prostitution, extortion, larceny, murder and the like.

What they don't realize, and they never have, is that there is only so much money to fuel the policing of anything and they'd have our limited funds being used to enforce nonsensical 40 year old, severely out-dated laws.

I do have 'some' engine noise but that goes away when I switch to NB or NB + ANL switch. My problem is distant noise that is non-voice (i.e. squeals, buzzes, static or garbled voice) seems to break in OVER the squelch setting. And setting the squelch even higher to avoid this precludes any communication with close stations. I'm not talking every few minutes but on CH19 where everyone talks around here it happens every 5 seconds. My Fianc� refuses to ride in the car with me with the radio on anymore because it is so annoying. I cant seem to squelch out the crap without losing everyone more than 1/4 mile away from me. Maybe it's someone in my area with some huge linear amp??? There is this guy on channel 6 that when he transmits I can hear him on channels 1 through 12 but only clearly on channel 6. Nobody can use the first 12 channels when this guy is talking to himself. Maybe this is the kind of trouble I'm running into. The problem comes and goes. It is not there all the time. Usualy it's when my fianc� is in the car so she can have a reason to bitch about the radio. I never seem to get the 'quiet, clear channel' that you refer to on any channel.

Jim

Hello Matthew:

At present, the conversion from pounds to dollars is 1.670 dollars per
pound. This would make your Yaesu radio worth; 400 (pounds) x 1.670 which
equals $668 US dollars, which is a very good price for that radio in used
condition. SELL, SELL, SELL

Good post Bill. Try asking a technical question on the Ham newsgroups and see how many responses you'll get (most of the time the answer is zero). On the CB newsgroup you'll get several answers within minutes, and ironically most of them are answered by Hams.

This illustrates me that they love being the teacher to those whom they feel they're superior to, and at the same time they don't like to share information amongst themselves because of some sort of embarrassment they may get from their own peers if they are proven wrong.

a lot of times i have noticed that people who have these so-called emergencies and get mad when something happens to impede their communications , really have nothing but a trivial matter to pursue, and then they get mad because they couldn't talk, another example of someone overestimating their importance. listen pal , if you want to butt into everything that goes on out there in this world , then go be a cop or a ambalance driver or emt. if you want to be a do gooder and use your radio to accomplish your goals, do not be mad when someone else disagrees with your ideas. why should the band , standby while you pretend you are important reporting a wreck or something. hell you can use a double l for that. remember it is not important what you are doing in the presence of the great one.............,icm out.......

Jeffrey Herman wrote
>In the cases publicized here in Hawaii, a US deputy marshal accompanies
>the FCC agent, and it's the marshal who forces entry.

The Marshall likely had a warrant. It's a *constitutional protection*, even from the federal cops. There are some legal exceptions to a warrant. For example if the officer can see a body inside the house they can force entry to give aid. (However once they determine it is a crime scene, they must back out, secure the scene, and get a warrant.) Another exception is fresh pursuit. The bad guy, running (with the cops close behind), can't just run into his house and say kings-x. But the amateur radio station inspection rule is certainly not an exception. If you refuse entry, unpleasant things may later happen to you in court, but absent a warrant, you *can* refuse entry to your home...

<<It takes a good parcel of land and a tower or two get signals out there that would even be considered useable.   Sure you can hang wires off trees but not everyone has trees to hang wires off of. >>

I have a tiny lot with barely enough room to string a 40M inverted vee at 29 feet. Pretty wimpy when compared to a tribander at 90 feet. But I'm able to work the world in any mode with 100 watts. And that's not uncommon. In fact, I'd say it was typical.

<<You also need neighbors that are about 100-200 feet away to eliminate or minimalize interference. Even with the cleanest station, you WILL interfere with some of their crap, that's inevitable with the cheap electronic junk thats around in the consumer market. There is simply no escaping that. I can't think of one ham that was able to get anything more than QRP out without running into some type of interference problem. >>

Neighbors are pretty close in to me. I do100 watts on 40 thru 10 with no complaints. And I've asked around.

<<<Yeah, and on 10-20 meters you basically have a mediocre signal.   40 and 80 work better, but the lightning crashes will kill 100watt stations with aplomb.   >>>

A 100 watt signal on HF is anything but mediocre due to propagation effects that make 1000 watts not much stronger (on the receiving end) than 100 watts.

<<Oh, and btw... G5RV = "antenna which works equally poorly on all bands"   good for a pinch but it's nothing to brag about.>>

The object is to communicate, not brag, or "be the loudest on the band".
In that light, the G5RV is a useful compromise antenna for many situations.

> the bill of rights.

When you key that CB transmitter or sign that ham license you agree to abide by the rules that govern its use. If you use a CB you agree to abide by FCC Part 95 as a condition of its use, if you are a licensed ham you agree to abide by FCC Part 97 as a condition of its use. Part of both agreements are that you AGREE to allow an FCC inspector to inspect your station or its records at any time. If you refuse then you violate the agreement which opens you up to fines and/or loss of the equipment or license.

95.426 (CB Rule 26)
Do I have to make my CB station available for inspection?
(a) If an authorized FCC representative requests to inspect your CB station, you must make your CB station and records available for inspection.
(b) A CB station includes all of the radio equipment you use.

� 97.103 Station licensee responsibilities.
(c) The station licensee must make the station and the station records available for inspection upon request by an FCC representative. When deemed necessary by an EIC to assure compliance with the FCC Rules, the station licensee must maintain a record of station operations containing such items of information as the EIC may require in accord with � 0.314(x) of the FCC Rules.

It doesn't "negate" the Bill of Rights in any way.
You sign away your "liberties" and "rights" every day.
When you sign your driver's license you agree to abide by the highway laws. You can't just drive as fast as

you want as a "freedom of expression." You have the
right to keep and bear arms but you can't carry a weapon
into a place where alchohol is sold. If you walk down a
city street brandishing a gun you will probably be arrested.
You can't just whip out the Bill of Rights to justify
your own irresponsibilities.

Kevin, WB5RUE

I just aquired a brand new AS Star duster never used yet and I just opened the box for the first time and noticed that it has a piece that is missing , I need the plastic that holds the radial on the ground plane section , this mounts on a strut coming out from the mastpipe . I had one and gave all my parts to a gentalmen on trade.

OMT
<<<<<<<<>>>>>>>>
You should be able to make one out of some type of plastic very easily. It will be very hard to find a new one, though. Take a piece of PVC pipe and drill proper size holes at proper angles, a little filing and you will be there.

Fine now I know what antenna we are talking about. We have a mobile 1/4 wave antenna also called a big stick - different scenario - different feed setup.

Ahh!!!! Man, see the breakdown in communication? Yeah, the
1/4 wave antenna is like you said! Anyway, I was just joking about
the crack - no hard feelings.

Bob.

Hey all.  I went on a camping trip with my buddies last year, and I was
the only one without a CB. It's a real pain in the ass not knowing where
the other guys are on a 4x4 trip!

Anyway, I really need a CB for these little expeditions, and I hoped you
```

all could point me in the right direction. Just something that won't
break my bank, target price of around $100. And smaller in size would
help, but is not a huge concern. I notice that many seem to be fans of
Uniden, but what are some other good considerations?

Also, if these can be purchased online I would appreciate the URL.

Thanx,
-NOJ-

The FCC Inspector does NOT have Police Powers, and needs a Federal Marshal, (on Land) or a USCG Officer (aboard ship) to provide Police Powers to conduct entry and sezure actions. If he is refused entry, he can have the License Revoked, and Fine or Forfeture Imposed, but these are all after the fact penalties, and must be approved by HQ in DC before imposition. When there is a liklyhood of refusal and the case demands imeediate action, the Enforcement Officer is dispatched with the Inspector, and when the Inspector certifies to the Enforcment Office that there is Probable Cause that a Violation is currently happening or has happened in the very recent past, then the Enforcemnt Officer does the entry and it is by His authority that any search and or sezure takes place, with the Inspector acting as a technical advisor to the Enforcement Officer. Been there, done that!

Well, you sound just like the guy in Dallas....

But for your information, not that it matters to you, the situation where the people were quick-keying was in Littleton, MASS, and the situation was a car with smoke under the hood. Neither I nor the other car had an extinguisher, and by the time the fire trucks got there, the car was fully engulfed. A total loss. Would it mattered if I had gotten a call through immediately? Probably not to the car, but possibly for the salvaging of the contents.

The situation in Dallas was on I-30. A beautiful mint 65 Mustang slammed on it's breaks when the car in front of him chickened out from merging and stopped dead on an onramp. The Mustang stopped dead as well, then a delivery truck slammed into the Mustang, totaling the Ford. The front of the truck was into the back seat of the Mustang, and the front of the mustang was destroyed by the car in front of it. Gas was leaking onto the roadway, and cars were coming up the ramp and sliding in the gas. There never was a fire, but should I have waited till there was a spark?

Or should I have just driven away in both those cases?

I know, somebody elses problem.

Yeah, I know about the people you refer to, the people that 'their information' is more important than procedure and policy. The 'wanabees' who so desperately want to belong. The people who persist in breaking into weather nets when the control is asking for something specific like trying to plot a front and asking for heavy rains or winds over 50 mph, and they just HAVE to get in there and say 'it's calm here'. Those kind of people...

But then, you're the other end.

People with morals like you disgust me. I have no time for you.

The only "myths" I see are in the
last post in this thread.

Antennas with multiple loading
coils do two things:

1. Lessen the overall physical
length of the antenna required
for resonance at the given frequency.

2. Lessen the overall amount
of cash left in your pocket or
wallet in exchange for some "hi tech"
song and dance.

Jack

As I mentioned the company will not let us use mag mounts (which I used with a Wilson 2000 with great performance). Now I have tried the Wilson no ground and I had a perfect match, but I could not get out..Anything over say a mile and my co workers could not hear me... I also could not hear worth crap either.. So I switched to a solarcon no ground and now I can here great like in the country far signals, but I still cannot get out well... I used to get out on a good day four to five miles now it is down to about a 1/2 mile to a mile depending on the noise..I have noticed that firestick has a no ground.. Do they work better ? And what about Francis fiberglass antennas ? Do they need a ground ? Now Allot of my friends have similar antennas as mentioned above and they are getting out pretty good to great... That is why I am considering getting another radio as well...A CB shop checked mine and said everything checks out, but this is getting frustrating.

Thanks,
Mike

a cb'er who runs a amp on 11 meters and bothers his neighbor..is a
criminal...a ham op. who runs 2000 watts legally..is also a
criminal..because disturbing the peace is also illegal but they hide
behind there little goverment issued SPAM ticket..hey you siad
it..illegal is illegal. and dont give me that shit about hams knowing
how to set up there radio station so good that they "never" cause tvi
and other problems..cuz they do!!!!!!! and for people that are so hung
up with the law..you hams sure put a lot of stock in that goverment
issued license..and the goverment is nothing but criminals. so your
licsened by a criminal!!!!!

I am a Peace Officer. Paramedic, and Firefighter. I have a lot of people who call on the CB, as well as Ham radio to report "their" emergencies. Some are legitimate, and some are not. It is for the people who respond to the emergencies to decide, and not the folks who refuse to allow them to be reported. As for the Mustang in Dallas, the mid to late 60 Mustangs were notorius for erupting in flames when struck from the rear, and fortunately in the case quoted, it was a gas leak insted. Just a catastrophe waiting for the right time to go into flames. I appreciate all of the calls, even though I dread hearing them sometimes. I cover a rather rural area here in Texas, and sometimes radio is the only way to get a message through. We do not have good cell coverage (THANKS! to the big cell companies.) Just remember, the fool breaking in with a trivial report may be saving a friend or family member.

"The polarization of a radiated wave is in the direction of the electrostatic field of the antenna. A horizontal antenna transmits a horizontally polarized radio wave. A vertical antenna radiates a vertically polarized wave". This should be self explanatory to all except those who have great trouble understanding what they read.

Excerpt (in quotes) from:

Electronic Communications
Fourth Edition
Robert L. Shrader

Your "misinformation" regarding multiple loading coils in antennas is just so much dribble.

Jack

You will still get the stinging shocks when you touch the radio. Grounding it will not stop that. You will get static discharge from your carpet. the shock is the static going to ground through your radio. IF the radio is properly grounded you don't have to worry about hurting the electronics because the charge will travel along the metal skin of the radio and then to ground. Yes this can hurt too depending on the conductivity of your skin and your own personal pain tolerance. (I'm an electrician and am no stranger to being shocked from time to time but electrostatic shocks really bother the hell out of me. During certain times of the year just getting out of my car I get hammered the moment I go to close my car door. It hurts me MORE than getting 120V AC from hand to hand.) I would recommend conditioning your carpet with an anti-static fabric softener the next time you shampoo your rugs or look into a humidifier when the problem gets bad if you can't take the pain. I have wood heat and in the winter I always put water in the iron kettle on the stove or my house becomes SHOCK CITY.

Vif, that's just normal CB sounds. The band is very noisy due to the current skip cycle being high. Many signals from other parts of the country or even the world are combining to give you the buzzing and squealing. Rest assured though, it will get worse. The cycle has not yet peaked...the channel 6 station, is a different matter though. He may be very close to you, or he may be running a linear amp, he may have his mod limiter clipped, or any combination of these things. Lou Franklin offers a product called the "Channel Guard" which MAY help with the ch 6 station, but it won't do a thing about the skip. Best of luck and 73.

They are not exactly the same as the heat sink is larger and the bias that is used is not the same either. I will say that both makers are the only ones that we have seen that doesn't have any standing wave. The no-names we have seen, we were not impressed with the design, layout, metal used for cabinet, or the performance. They looked and performed poorly. At least these two makers have quality on their minds.

The heatsink is inside the case on all davemades and x force amps as well as
the nonames to name a few guess they are all cheesy.

Hey lowttower and john take a hike back to your anal rec.radio.amateur.policy
.Nobody cares about your fcc/arrl  jack boot policys.This is why we are on cb,
not to deal with the likes of you two .It`s always  new tech hams who come in
here and step on your dicks.Do you really think what you say is going to matter
on this group? hahahahahahahahaha go play with your HT!

Excellent points made, Mr. Jones. Please allow me to elaborate. Since this post is going to both RRAP and CB NGs, I thought I would take the opportunity to do some civilian RADAR training in the hope that we could all understand how RADAR and the decision process works ...

In your post you combined two areas that really need to be separate (not your fault, I'm absolutely astonished that you have such excellent knowledge of the subject)

Target Vehicle Identification (RADAR "decision" process:)

Reflective capability
Position
Speed

These are what the RADAR "looks" for in order of importance. A truck will have a much higher reflective capability than a car or a motorcycle. This is why:

K-band RADAR, which is the most widely used type, has a beam width of about 70 feet in diameter at 250 feet from the RADAR, 280 feet in diameter at 500 feet from the RADAR,and about 1120 feet in diameter at 1000 feet away from the RADAR.

From this, we can easily see why a truck would fill *most* of that cone, even as far away as a 1000 feet. Naturally, the RADAR is going to pick up on the largest piece of metal in the cone. If two targets are within the cone, and they are about the same size, then the closest one will usually fill most of the RADAR cone, and once again become the primary target of the RADAR. Finally, If both vehicles are about the same size, and in about the same position, the RADAR will pick up on the faster speed and make that vehicle the primary target.

Now change this to a truck and a motorcycle, and you can see how this would be even more exagerated. A poorly trained police officer could easily think the motorcycle was the offender, when in fact, the truck was speeding.

That's why we must also incorporate a "Tracking History" into every stop:

Visual estimation of target speed
Audio tracking
Target speed display
Patrol speed verification (moving RADAR)

The first thing a police officer should do when determining if a particular vehicle is speeding is to visually estimate the speed. This can be accomplished a number of ways, but movement in relation to traffic is one of the easiest. Seasoned officers can "guess" speeds within +- 2 mph.
